Dr. Cynthia Crawford, a psychology professor in Cal State San Bernardino’s College of Social and Behavioral Sciences, is the first faculty representative from a CSUSB to serve on a National Institutes of Health review panel for research grants. After serving for two years as an acting member, Crawford was invited to take a permanent position on the Behavioral Regulation, Learning and Ethology Study Section, Center for Scientific Review.

Crawford is well acquainted with the rigors of research funding, as she was a 1999 NIH grant recipient for her work on dopamine receptors and behavioral sensitization and her research and research development programs have been consistently supported by NIH since then.

Crawford has also been a leader at CSUSB in inspiring, mentoring, and supporting the research careers of faculty from a broad array of disciplines to obtain funding of biomedical-related research projects.

We interviewed professor Crawford to find out how she achieves her funding success and to get some insider tips from an official review panel member.

Crawford joked that she has been “amazingly lucky” in her quest for funding, but luck alone cannot account for all of her success. She learned early on that grant writing has unique demands and needs to be approached differently than writing for publication.

“...research on our campus is important not only for contributing to the body of knowledge in our fields but for inspiring and training the scientists of tomorrow.”

Cynthia Crawford, Psychology and Human Development
Crawford: An Insider with Knowledge ...

Promote yourself and your ideas: Crawford advises that grant writing needs to be approached in the manner of writing a business proposal. It is necessary to persuade, promote, and convince review panels that you and your proposal are worthy of funding. Reviewers need to be convinced early on that your proposal has merit. Also, take into consideration that a project director's qualifications are every bit as important as the ideas expressed in the proposal. Sell yourself as well as the proposal, Crawford advises, “This is not the time to be modest about what you think. You really have to say – this is important and why …”

Be Realistic: Crawford advises faculty to “build into funding.” Sometimes asking for too much funds can be a fatal mistake. She states, “Prove your record and be a good investment.” The professor explained by using the analogy of trying to obtain a new car loan. Can you expect to be able to purchase a Mercedes without the necessary down payment? No. Can you expect to receive hundreds of thousands of dollars in funding without a proven track record? No. Will having a co-signer help you? Absolutely.

Think of publishing as the down payment necessary for grant funding; it can prove to reviewers that you are worthy of the risk. If you have published but have no experience in any one area of your proposal, do not hesitate to bring in consultants. Just as a co-signer can help you obtain a car loan you do not qualify for on your own, bringing in scientific advisers or consultants can ensure reviewers that you have the experienced personnel to assist in administering portions of the project.

Follow the Rules: Grant writing is “not a place for individual preferences or doing what you did last time,” Crawford stated. Agencies tend to be fairly rigid in what they want and Crawford advises to “do whatever they ask!” If an agency request seems redundant, maybe there is a good reason for the repetition.

Common Mistakes to Avoid:

Do not pad or cover-up things in your proposal. Reviewers can tell what you are doing. You have a better chance of obtaining funding by being honest and explaining any deficiencies your proposal suffers.

Watch the page allocation to the different sections of your proposal. Many proposals have too many pages in some sections and not enough in others. Significance is increasing in importance to reviewers and design methods are decreasing in importance. In the next year or so, agency page requirements will reflect this shift in importance.

Crawford advises grant writers to never forget, “You are trying to convince somebody and the strength of your argument matters … selling, promoting ideas – showcasing you and your talents are all key components.”

The Importance of Research

Welcome to the first issue of Scholarship in Action. Research, scholarship and creative activities (“research”) by faculty and students are an important facet of our academic mission at CSUSB. Participation in research by both faculty and students generates enhanced and often accelerated student learning, increased student retention and graduation, stronger student preparation for the workforce, increased faculty retention and job satisfaction, and maintenance of currency by faculty in their discipline. Because our campus focuses on undergraduate and master’s level students, our students have increased opportunities to be involved in research compared to the major research universities.
Awards: July - December 2008

SPOTLIGHT: AWARDS

SPOTLIGHT: “Integrated Technology Transfer Network (ITTN)” by Mike Stull works to address Congressional directives issued to the Department of Defense about becoming more entrepreneurial. New processes that are more in line with organizational directives are needed to accelerate the transformation of Army research to tangible outcomes for the Soldier. ITTN will facilitate environments focused on the exchange of ideas, methodologies, and knowledge between entrepreneurial and science disciplines and ARL personnel. The ITTN program will help emerging scientists learn how to move “from mind to market” by merging existing science expertise with innovative entrepreneurial approaches.

SPOTLIGHT: “Recruitment, retention, and training in Restoration Ecology” by Kimberlyn Williams and John Skillman. This project seeks to improve recruitment, training, and retention of students from under-represented groups for careers in restoration ecology and vegetation management in San Bernardino, Calif., and its environs. The project would increase the capacity of CSUSB to provide such training, boost student success in attaining a bachelor’s degree there, and provide opportunities to students at CSUSB and two nearby Hispanic-serving community colleges to work with the U.S. Forest Service and UCR, encouraging them to enter careers and/or pursue higher degrees in fields related to restoration.

**SPOTLIGHT: AWARDS**

**SPOTLIGHT: “Worker factors in the overrepresentation of African Americans in the child welfare system”** by Laurie Smith and Teresa Morris. The proposed research was modeled after a pilot study in which child welfare intake workers assigned a higher risk of neglect and abuse to African American families in hypothetical vignettes where only family ethnicity varied. The study will use a randomized post-test only control group design with a multi-county sample of workers and test variables such as worker ethnicity, education, and training as predictors of race/ethnicity bias in assessment. Findings will be used to develop curriculum to address the effect of worker factors in the overrepresentation of African Americans in the child welfare system.

Did you know...?

**Direct Cost:** Direct costs are those costs that can be identified specifically with a particular sponsored project, relatively easily with a high degree of accuracy.

**Indirect Cost:** Indirect costs are those that are incurred for common or joint objectives, and therefore cannot be identified readily and specifically with a particular sponsored project. There are three methods of computing indirect cost;

1) **Total Direct Cost** (TDC) is computed on all costs associated with the project.

2) **Salary & Wages** (SW) is computed on only the salaries and wages expended through the grant. This method is used by the federal government to establish the rate for institutions with less than $10 million of sponsored research per year.

3) **Modified Total Direct Cost** (MTDC)* is calculated by subtracting a specific line item(s) from the total expenditures. Normally these items are equipment and/or student support (tuitions or stipends.)

*CSUSB calculates indirect costs as MTDC x the federally negotiated rate, which is posted online at http://orsp.csusb.edu

Dr. Michael Stull, a professor of management at CSUSB, is the director of the department’s BA/MA entrepreneurship program and the Inland Empire Center for Entrepreneurship. With collaboration from more than 30 public and private sector partners and a combination of students, faculty and program staff, IECE delivers consulting, training, mentoring and project-based services that have resulted in services being delivered to nearly 10,000 individuals and business owners.

Stull’s personal drive and efforts at the IECE have helped develop 12 major business programs, obtain more than $8 million in grants and sponsorships, and gain national recognition as one of the top 100 U.S. colleges and universities for entrepreneurs among graduate entrepreneurship programs.

Most recently, IECE and CSUSB have worked in collaboration with the U.S. Army Research Laboratory to develop the Integrated Technology Transfer Network program, an intensive education program in entrepreneurship for science graduates of historically black colleges and universities. The ITTN is designed to train minority scientists to become the entrepreneurial leaders and technology innovators of the future (see page 3 for abstract.)
More Training Workshops Coming...
Keep your eyes on the ORSP Web site and newsletters for information about upcoming training workshops to help you gain useful insights about writing proposals, locating funding sources, and submitting electronically. Below are some tips from the Russell & Morrison Grant Writers Seminar, August 2008.

FUNDING AGENCY
Helpful Hints

Research what gets funded; find the angle that the agency leans toward funding and go that way! Check grant databases to review existing grants that have already been successful in obtaining funding.

E-mail the funding agency program director and state that you want to “maximize programmatic relevance.” Some are willing to provide feedback prior to your submittal. Some funding agencies (e.g. NEH) even encourage this contact to aid in your success.

Read funding agencies, mission statements carefully. Include those missions to make your proposal more persuasive. Show how your proposal aids the agency in achieving its overall goals.

Tell reviewers why your proposal is important to the future of your field. Remember, reviewers cannot be experts in every field of study. Without talking down to them, point to key benefits and how your work could have an amplified impact in your field.

Paraphrase. Do not repeat. Clever repetition works to convey your point, but double talk can be off-putting.
