This Other is brought to you for free and open access by the Teaching Resource Center at CSUSB ScholarWorks. It has been accepted for inclusion in Teaching Skills Study Awards (TSSA) Reports by an authorized administrator of CSUSB ScholarWorks. For more information, please contact scholarworks@csusb.edu.
NAME of CONFERENCE:

TEACHING STRATEGY OR METHOD studied in the conference:
The Cal-TASH conference has offered one of the best practical programs and training sessions for special educators who serve students with moderate-to-severe disabilities. I learned how to utilize alternative assessment methods and community-based inclusive education for students with moderate-to-severe disabilities by attending the following sessions:

- How to measure the needs of users for Augmentative and Alternative Communication (AAC);
- Increasing inclusive practices through learning center models;
- Sharing unique ways to engage technology to further independence;
- How to co-plan, co-teach, and co-assess in an inclusive Elementary classroom;
- How to increase self-care independence for students with chronic health conditions through the development of collaborative Individualized Education Program (IEP) goals;
- Strategies on embedding interventions to support the optimal learning for children with disabilities in a preschool program; and
- Research-based transition practices that are effective for post-secondary students with disabilities

IMPACT on Current Teaching (How was this info applied?)
The strategies and practices I have learned from the conference directly have impacted on ESP611 Assessment Methods in Special Education. I was able to (1) enhance my teaching skills related to developing the curriculum for alternative assessment methods and community-based inclusive education and (2) expand my knowledge of current effective teaching methods/strategies in the field of special education. My teaching techniques and skills were refined by learning alternative assessment methods, community-based inclusive instruction, AAC for English learners, and increasing Common Core State Standards (CCSS) accessibility for students with disabilities. I was also able to develop innovative teaching and learning methods that integrate Web-based activities into the course of Assessment Methods in Special Education. Attending training sessions provided by the Cal-TASH conference (1) assisted me to develop on-line curricular activities, (2) allowed me to encourage students to be critical thinker, effective problem-solvers, and self-regulated learners, and (3) enhanced my strategies for teaching multicultural classes and collaborative learning.
