This Other is brought to you for free and open access by the Teaching Resource Center at CSUSB ScholarWorks. It has been accepted for inclusion in Teaching Skills Study Awards (TSSA) Reports by an authorized administrator of CSUSB ScholarWorks. For more information, please contact scholarworks@csusb.edu.
TSSA One-Page REPORT

Name, Department, and Email address:

Xinying Yin

Department of Science, Math and Technology Education (Department of teacher education and foundations)

xyin@csusb.edu

Name and Date of conference attended:

Teaching Skill(s) Studied:

1. The most significant piece of information I have learned from this conference is teaching engineering, as required by the Next Generation Science Standards (NGSS), in K-12 science classrooms. I went to a hands-on workshop, roundtable discussions, several presentations and posters, presented by scholars both from the U.S. and from other countries.

2. With regard to culturally relevant pedagogy, I learned using story-telling to connect NGSS and Common Core-English language arts. As well, I learned a professional development (PD) model for culturally relevant pedagogy. In this presentation, some foundations such as cultural competency and socio-political consciousness were introduced, an in-service science teachers’ PD model, strategies of to enhance pre-service science teachers’ culturally relevant pedagogy and students’ learning were discussed.

3. As well, I went to a presentation about using hands-on performance assessment in K-12 classrooms to assess mastery of both the science practices and disciplinary core ideas in NGSS.

Impact on Current Teaching (How was this info applied)?

I have used the information about teaching engineering in K-12 science classrooms in my Multiple Subject Credential Methods Course (EELB532), and Master’s course ESTM 628: Integrating mathematics and science in K-8 classrooms. Particularly for ESTM 628, engineering has been integrated with science and mathematics teaching, which made this course a pioneering course of teaching integrated STEM curriculum. The information culturally relevant pedagogy has informed significantly to my effort of revising the current science methods course EELB 532, which I will complete the revision during this coming summer. The performance assessment for NGSS is still in an introductory stage and this is what I will also focus on in my teaching and research in the near future.
