Top administrators respond

By Jim Austin

Two top administrators have responded to the criticisms printed in the Jan. 18 Paw Print. Specifically, the article in question was "Campus suffers from poor planning" by Dan Clint.

That article focused attention on some of the problems which resulted from the design of this campus: i.e., flat roofs, which tend to leak, windrown windows, and long distances between buildings with its problems for handicapped students.

"You can criticize almost any building," said Joseph Thomas, vice president for administration. He thought the article was unduly negative and that it could also have focused on the planning and which has been successful. "Planning has been good in coping with future and unforeseen problems," he said.

More specific was James Urata, building coordinator. "Leaky roofs are a general problem that we can't avoid," he said pointing out that all roofs, slanted or otherwise, will eventually leak. Urata admitted that there were problems with flat roofs as stated in Clint's article. "All our future buildings will have some pitch to the roof," he said.

Urata admitted that the original plans assumed a greater population growth than had actually taken place. The Copland selection, written by Leonard Bernstein, which is an educational piece, was originally planned to be located further away from the center of campus.

"The awareness of the handicap's need was only recently recognized in comparison with the other 18 campuses (of the California State University and College System) we compare extremely favorably," Urata said. He indicated that with the exception of upper stories of college dormitories, the windows of some contention between the disciplines. The extension seminar for educators is sponsored by California State College, San Bernardino. Meetings will be from 6:30 to 9 p.m. in the Learning Resource Center of Magnolia School.

Eldkind, professor of psychology and education at the University of Rochester, is author of the recently published "The Psychology of Child Development and Education: A Piagetian Perspective." He has studied with Jean Piaget and will base the seminar on the Swiss psychologist's philosophy and theories in relation to learning in the classroom.

The educator was formerly director of the Child Study Center at the University of Denver. He is consulting editor for many psychological journals and a consultant to government agencies, state education departments, clinics and mental health agencies.

In 1974 he became headmaster of the Mt. Hope School, an experimental boarding school with the University of Rochester. Eldkind's bibliography includes research, review and theoretical articles, book chapters, books and more popular pieces such as children's stories for Jack and Jill and articles for the New York Times, Parents' Magazine and Saturday Review.

Cost of the seminar is $72 for those wishing two units for extension credit in education. The non-credit fee is $60. Registration may be arranged through the Cal State Office of Continuing Education.

Solar energy class

A solar energy workshop enabling participants to construct simple devices or more intelligently buy them for home use will be offered in San Bernardino starting Feb. 11.

Pre-registration is required by Feb. 4.

The workshop, presented for the public by the Cal State, San Bernardino Office of Continuing Education, will meet Friday, Feb. 7 at 10 a.m., Feb. 11 and Saturdays, 9 a.m. to 2 p.m., Feb. 12 and March 9, in Room 124 of the Biological Sciences Building.

"There has been a sad lack of useful information on the theory, uses and application of solar energy for the individual," says Nigel-Ian Hamilton, solar physicist, who will conduct the workshop.

"The individual can play a vital part in the establishment of an energy independent nation, with the personal benefits of substantially reduced fuel bills," he says.

The basic theoretical principles will be presented in simple technical and scientific language, and the various areas that solar energy embraces — tidal power, ocean heat, wind power and solar thermal and electrical power — will be covered. A follow-up workshop will assist participants who have questions resulting from personal experience in building solar-energy units.

Hamilton, a 1969 graduate in electrical engineering from the University of Pretoria, South Africa, has been working for Trinity House Lithograph Service in London. As a scientific officer in their research group, he represented them at the international conference on solar energy at UCLA in the summer of 1974.

Cost for those wishing two units of extension credit in natural science is $50; non-credit fee is $38.

Further information on the course or on pre-registration may be obtained from the Cal State Office of Continuing Education.

ASB Senate talks money

By Ray Byers

During the last two meetings of the ASB Senate, the prime subject of discussion has been money. The discussions have centered around bad checks, transfer and allocation of funds and a decision not to spend some money.

Senator Jane Heister, Chairperson of the Appropriations Committee, stated that her committee approved a suggestion to revise ASB By-Law No. 11. The suggestion centered around changing the procedure for handling bad checks written by individuals against insufficient funds. The matter has been referred to the Rules Committee for their recommendation. Any further action on the suggestion will be held in abeyance until that committee renders its report to the senate.

At last Tuesday's meeting the Senate approved the transfer of $750 from the Activities Lecture Fund and $1,000 from unallocated funds, and transferred the money into the Activities Special Event Account to cover the costs of sponsoring a concert at the Swing Auditorium sometime in March. The concert will be headlined by "The Association" and will feature a mime, Mark Wenzel, and a comedy team.

Upon the recommendation of the Appropriations Committee, the Senate also approved the transfer of $1,000 from unallocated funds to the Travel and Conference Account to cover the costs of attendance by designated ASB members at the meetings of the Student Presidents Association, Board of Trustees and the State Task Force, Cal. State presently has three of its students on the twelve member task force.

ASB Vice President Fred Debano reported to the Senate on the list of items presented before the Student Presidents meeting that was held in Pomona.

One item has become a matter of some concern to the Board of Trustees and the Student Presidents. This is the Writing Skills Test the trustees want administered to all incoming freshmen in the fall. The ASB members will cost each of the trustees $8 to what type of notation will be indicated on the student's record and how long the student's record will reflect the results of the test. Two suggested amendments to ASB By-Laws No. 2 and No. 3 were sent to the Rules Committee for study.

By-Law No. 2 pertains to the secretary of the ASB Executive Cabinet, which is an elected position, and carries a scholarship of $300 a year. By-Law No. 3 is in regards to the secretarial position of the ASB Senate, which is an appointed position and pays approximately $300 a year. The secretary of the Executive Cabinet makes all matters before the cabinet, the Senate secretary has no vote.

If both by-laws are changed as suggested, both positions will become non-voting positions and be placed on a "hired" basis, adding that "The ambiguity of wording in the present by-laws.

Other matters which came before the senate were:

--- Senator Heister reported that the Appropriations Committee does not recommend that CSCSB join the Auxiliary Organization. The annual cost is $120 and the benefits are debatable.

--- The subject of raising the ASB Student Fees from $19.90 to $20 a year has been sent to both the Rules and Appropriations Committees for discussion and their recommendations to the full senate before any further action is taken.

Child develops seminar offered

By Jim Austin

Two top administrators have responded to the criticisms printed in the Jan. 18 Paw Print. Specifically, the article in question was "Campus suffers from poor planning" by Dan Clint.

That article focused attention on some of the problems which resulted from the design of this campus: i.e., flat roofs, which tend to leak, windrown windows, and long distances between buildings with its problems for handicapped students.

"You can criticize almost any building," said Joseph Thomas, vice president for administration. He thought the article was unduly negative and that it could also have focused on the planning and which has been successful. "Planning has been good in coping with future and unforeseen problems," he said.

More specific was James Urata, building coordinator. "Leaky roofs are a general problem that we can't avoid," he said pointing out that all roofs, slanted or otherwise, will eventually leak. Urata admitted that there were problems with flat roofs as stated in Clint's article. "All our future buildings will have some pitch to the roof," he said.

Urata admitted that the original plans assumed a greater population growth than had actually taken place. The Copland selection, written by Leonard Bernstein, which is an educational piece, was originally planned to be located further away from the center of campus.

"The awareness of the handicap's need was only recently recognized in comparison with the other 18 campuses (of the California State University and College System) we compare extremely favorably," Urata said. He indicated that with the exception of upper stories of college dormitories, the windows of some contention between the disciplines. The extension seminar for educators is sponsored by California State College, San Bernardino. Meetings will be from 6:30 to 9 p.m. in the Learning Resource Center of Magnolia School.

Cost of the seminar is $72 for those wishing two units for extension credit in education. The non-credit fee is $60. Registration may be arranged through the Cal State Office of Continuing Education.

Quartet performs

The Music of Mozart, Copland and Dvorak will be performed by the Leslie I. Harris String Quartet at Cal State, San Bernardino Sunday evening, Feb. 8. The concert is a part of the State College-in-residence will begin at 7:30 p.m. in the Lecture Hall of the Physical Sciences Building. Admission is $1.50. Children and students with identification are admitted free.

Opening the program will be Mozart's "Quartet in B Flat, K. 458," written in 1784 Vienna and known as the "Hunting Quartet," because the first measures sound like hunting horns.

Catherine Graff, a member of the quartet, will play Paul Hindemith's "Hifadagio, movement as one of the most beautiful things Mozart ever wrote. It was originally written for a mass when the composer was very young and later was rewritten. Other selections on the program will be Aaron Copland's "Two Pieces for String Quartet," and Antonin Dvorak's "Opus 96 in F Major."

The Copland selection, written in 1931, is a setting of a smaller piece by Nadia Boulanger in Paris, brought the composer his first recognition. "Lento molto" is reminiscent of hymn singing and a small organ in the church; "Rondo" reflects the American jazz influence.

Dvorak's composition, popularly called the "American Quartet," magazine while he was in this country and was influenced by Negro spirituals and other American music of the period.

Members of the Harris Quartet are: Victoria Shapiro, viola; and Armen Turadian and Clyda Yedinak, violin.

The quartet recently gave a program at Riverside City College and has been asked to perform March 20 as part of the Fontana Community Concert series.

**Workshop to stress child creativity**

"Let the young child mix his own peanut butter, honey and dry milk for edible sculpture." Mr. Godfrey, 2—The Weekly PawPhnt, Feb. 1, 1977

Mr. Godfrey, the workshop will be held Sunday, Feb. 5, from 10 a.m. to 3 p.m. in the college's Child Care Laboratory, 2500 E. Kelton Ave. in San Bernardino. Mrs. Calkins is the center's director.

"My Man Godfrey" shown here

The great American Depression spawned many things, including some outstanding entertainment. Among the best was the classic film comedy, "My Man Godfrey," which the Library offers tomorrow at 1 p.m. in the Listening Facility on the fourth floor.

With William Powell and Carole Lombard, directed by Gregory La Cava, it had to be a hit. And it was. Time for Sept. 12, same year: "...unemployed." Time for Sept. 14, 1936: "...unemployed..."

Not to be outdone, Newsweek, Sept. 12, same year: "...unemployed."

Interestingly, the scenarioists, Morrie Ryskind and Eric Hatch, recall the action occasionally by expressing their sympathy for the unemployed.

"Lombard and Powell were a team to reckon with. The scavenger hunt that leads to Powell's employment as a butler emerges with that evasive quality that is not skillful playing, writing, or direction, but something that mysteriously adds itself to these things and makes a tip-top picture."

"My Man Godfrey" is not an easy film to understand. In addition to edible sculpture preparation, the children should be allowed to mix their own clay, experimenting with amounts of ingredients, she says.

"Get out the flour, salt, oil and water and let them do it themselves." She suggests that the child be allowed to become thoroughly familiar with the materials, what she calls "messing around," before proceeding to create something with them.

"Creative Art Experiences for Young Children" is planned for pre-school, nursery school, child care, recreational programs and kindergarten personnel.

Calkins stresses the importance of understanding a child's creative needs.

"If children are allowed to be open and creative in the art field, they will be creative in music, personal relations, writing, field of life and other areas of life," she said.

A minimum of structuring is desirable, the director adds. She suggests that the child be allowed to become thoroughly familiar with the materials, what she calls "messing around," before proceeding to create something with them.

"Give an honest, positive comment such as 'You used the bright colors,' or 'Gee, you painted the whole thing and didn't get any paint on the floor.'"

Teachers enrolled in the course will have the chance to work as a child would and discover the positive aspects of being told that "It's okay."

"Techniques for integrating the program according to facility limitations and the needs of diversified age groups will be discussed.

Cost for taking the course for one unit of extension credit is $28; non-credit fee is $22.

Registration may be arranged at the start of the workshop or in advance through the Cal State Office of Continuing Education.

---

**Operation Crossroads students visit Africa**

"Dedicated to African American Friendship Operation Crossroads Africa" Unveiling a clinic bringing the first health care to a rural African community. Over 360 Crossroads projects stand completed throughout Africa.

By Dr. Robert Stein

R. Moses Thompson of Operation Crossroads Africa met last Monday with a small but interested group of CSUSB students. He showed a movie made by three Crossroads volunteers in Africa and talked about the possibility of one or more students from CSUSB going to Africa this summer as Crossroaders.

Since its founding in 1958, Crossroads Africa has sent over 4,000 volunteers to Africa and inspired the formation of many volunteer programs in the United States and Africa, most notably the Peace Corps. John F. Kennedy, meeting with Crossroaders at the White House in June, 1962, said: "This group and this effort really were the progenitors of the Peace Corps."

Unlike the Peace Corps, Crossroaders sends it volunteers to Africa for just one summer, and the primary goal of the program is not aid but growth of human contacts and understanding across cultural lines.

Crossroads provides an opportunity for Americans to get to know both traditional and modern African life in an intimate way seldom possible for Westerners. The work projects, initiated by the local communities, are both of value in their own right and excellent vehicles for human contact. Typically a group of eight to 10 North Americans and a similar number of African college students live and work together at the project. Projects have included building schools, clinics, roads and community centers as well as health education and inoculation campaigns, reforestation projects and even work with African artists.

In many cases Crossroaders are able to arrange to receive college credit in connection with their summer activities.

It may be possible to send one or more CSUSB students to Africa this summer—though it will take some serious effort to raise funds. Crossroads expects each participant to raise some $1500 toward the cost of his or her trip.

This is not easy, but the CSUSB Crossroads Africa Committee stands ready to assist those who would like to try. For further information and application forms, contact Walter Hawkins at 867-7396.

**Career relations on campus**

The 70s have been a decade of real promise and opportunity for individuals involved in sales and financial planning.

Insurance companies are among the largest sales and financial organizations in the world, and are always looking for the special type of person who can meet the challenge of the 70s' financial planning.

Individually involved in sales and financial organizations in the 70s' can meet the challenge of the 70s' sophisticated consumer wants and keep pace with the ever-changing vehicles for human contact.
Couples learn to communicate at seminar

Myra and John sat facing each other in the middle of the room. John moved up in his chair, looked at Myra and said:

"I would like to say a few words about school and how much time it seems to be taking. I have the feeling that it's been taking us apart just at the time in our lives when we should be doing more making time together, our relationship, and I'm a little frightened by it.

A flicker of concern showed on Myra's face; then she looked at her husband and replied:

"I'm glad you thought that up. I have also been feeling distance between us, but I didn't know why. I knew that with school making so many demands on me, I can't even think about doing the things we've talked about when the kids were in school.

Myra stopped a moment, then added, "Our relationship is important to me, and I don't want to damage it to be doing this.

It was a risky topic, one that Myra and John had tried to discuss only with each other for the last months. Myra angrily accused Myra of neglecting the family and the house. Myra, on the other hand, defensively that exams that would soon be over. The discussion would end with nothing resolved, and with both feeling angry.

Now, Myra and John were talking less. When they lived together, and they were talking constructively, trying to understand each other's views. The difference was a twelve-hour seminar on couple communication — course designed to help married or dating partners the skills to talk with one another in a constructive fashion.

The five other couples were asked to comment on how Myra and John had talked with each other. Did they steer clear of statements that were blaming, accusing, demanding and instead take responsibility for their own reactions and explore those of the other? In talking, did Myra and John show that they respected themselves and each other, or was one putting self or partner down?

The above seminar will be offered on campus, starting Tuesday, Feb. 15, at 7-10 p.m. This seminar is a structured learning experience for married or dating couples that is neither therapy nor magical inspiration, but rather teaches techniques and provides a framework for communication that couples can use for the rest of their lives.

The four three-hour sessions:
(1) give a couple the skills they need to talk safely about potentially explosive issues.
(3) help to put two people on an equal basis in their conversations.
(3) help people to express their feelings, to understand and to make themselves understood.

This is a free program if at least one member of the couple is a CSUSB student. Couples who are interested in participating should call or visit the Student Counseling Center, PS-227, 867-7437.

Brodock gets profiled

Vets under fire

By By Hank White

The veteran is becoming the recent target of public disconcern over the V.A. This is due to the Hospitals, retirement and pension benefits, etc. The veteran is even the latest target of the drug crazy, murdering, Vietnam veteran who will get you if you don't watch out.

Recently, strong measures have been introduced in our government to put an end to the VA scandal. The Senate's Veterans Affairs Committee, proposals which will split up the committee and put in under other Committees, Veterans housing would be split up between Banking, Housing, and Urban Affairs Committee while the remaining of the Affairs Committee would be incorporated in the Human Resources Committee.

Proponents of the reorganization claim the plan will provide for better care, and allow for more orderly and informed decisions concerning these programs.

There are more than 30 million living American veterans. This number, when coupled with their dependents and the widows and orphans of deceased veterans comprises a large segment of America's population.

The Veteran Administration, which services veterans under law, is the third largest agency in the Federal Government. The VA's budget appropriated for the fiscal year 1977 totaled more than $18 billion. The VA operates the largest single health care delivery system in the nation.

The VA's programs include the operation of a massive compensation and pension program, the medical care, rehabilitation program, the national cemetery system, and a comprehensive life insurance program.

Without a doubt, a Federal agency of this magnitude requires a Senate Committee to oversee and consider its operations. If you agree with me on saving the Senate's Veterans Affairs Committee please write your Congressman and Senator asking them to vote against revamping the Veterans Committee.

Please do it NOW or it may be too late?

Benchwarmer

Insights displayed

By Clover C. Sheepcorn III

Working on the PawPrint is sure giving me an insight into people.

Recently I watched a written battle between student editor Jim Austin (Mr. McCarthy's) and instructor-author Robert Blackey (Commie Pinkie). I don't know who won and really don't care because I ain't gonna read the book unless I have to. However, I would like to make one comment about the situation. It seems to me when one writes a book or runs for an office, she-he opens the door for public opinion, criticism, etc. No one can please everyone, so it should not be a surprise when they come under attack.

Austin may have accomplished what many consider a good job, Blackey's book, but it shouldn't have been his. If Blackey or Austin should lower himself to the same level, using the same tactics as Austin, Pinkie should have listened to his first reaction, ignore McCarthy's Review and not grace McCarthy's with the response.

I will say one more good thing about Blackey though; he's got the best X-rated bulletin board on campus.

Did ya'U read that Student Government is thinking of raising its fees? Kind of makes you want to kick something, especially because what the heck does Student Government do for students? Admittedly they must do something or they wouldn't be around but how many students do they represent? Not many, somehow Student Government has failed to reach the majority of students. Raising fees won't make students flock to ASB functions, either. Yet Student Government has got to find out why students don't care to get involved, why students don't care.

Maybe it's time for its members to expand the concept of Student Government beyond traditional activities and aggressively seek other activities such as: Student Legal Aid Clinic, Bike paths, debates, bowling leagues and so forth.

Most important Student Government has to actively seek out other avenues for additional funding for its activities instead of raising the already ridiculous cost of something that most students don't care about.

‘Placebos’ actually help

By Dr. David Hendrickson

In pharmacology, a placebo is a dosage form of material which is similar in appearance to an actual medication but which contains only substances devoid of pharmacologic activity. It would seem that such materials would be of no use in medicinal chemistry research, yet they are of vital importance. This is so because in any group of “normal” individuals, about 30 per cent will respond to the act of receiving a “placebo reaction” control group.

At the Mayo Clinic on pain relievers. In this case, 21 per cent of those receiving placebo reported at least 50 per cent pain relief. The same principle accounts for the effectiveness of many of the over-the-counter medications and vitamins. This is not really so surprising. After all, you blunk when you’re embarrassed, you perspire when you’re nervous, why shouldn’t you feel better when you take medicine which you are told and which you believe will make you feel better. The psyche does have a tremendous effect on the soma. So much so that placebos have been shown to lower blood sugar and to produce nausea, vomiting, skin eruptions, and white blood cell changes.

The power of suggestion, the environment, and, of course, the pharmacologic effect all contribute to a person’s response to a drug. This is illustrated by a study done with LSD in which a group of normal volunteers were given samples of material which were given and placed in three different situations. One group was not told they had been given LSD but were placed in a “calm” environment. A second group were told they had been given LSD but were placed in an environment where no one exhibited bizarre behavior. None of the third group hallucinated. A second group were told they had been given LSD but were placed in a “calm” environment. A second group were told they had been given LSD but were placed in a “calm” environment. A second group were told they had received LSD and were placed with others who intentionally exhibited bizarre behavior. The effect of the drug was again increased. No individuals given a placebo hallucinated in any of the above conditions. Thus the drug, the environment, and the power of suggestion all operate to determine the effectiveness of the drug.

Factors which have been found to influence the effectiveness of a placebo include color, size, and route of administration. Generally, the more expensive, the better the effect. A snob appeal in drugs.

Even surgery can be a placebo. In one reported study a surgical procedure of tying the internal mammary artery to treat angina pectoris was found beneficial. Later in a double blind study at the same hospital, half of the patients undergoing the operation, had all the surgical procedures done except the artery ligation. All of the patients going to surgery got better. Also, in any type of manipulative therapy, such as chiropractic or physical therapy, the power of suggestion, the environment, and, of course, the power of suggestion all operate to determine the effectiveness of the drug.

No one says, but study after study confirms the effect. One example is research done at the Mayo Clinic on pain relievers. In this case, 21 per cent of those receiving placebo reported at least 50 per cent pain relief. The same principle accounts for the effectiveness of many of the over-the-counter medications and vitamins. This is not really so surprising. After all, you blunk when you’re embarrassed, you perspire when you’re nervous, why shouldn’t you feel better when you take medicine which you are told and which you believe will make you feel better. The psyche does have a tremendous effect on the soma. So much so that placebos have been shown to lower blood sugar and to produce nausea, vomiting, skin eruptions, and white blood cell changes.

The power of suggestion, the environment, and, of course, the pharmacologic effect all contribute to a person’s response to a drug. This is illustrated by a study done with LSD in which a group of normal volunteers were given samples of material which were given and placed in three different situations. All of the patients going to surgery got better. Also, in any type of manipulative therapy, such as chiropractic or physical therapy, the power of suggestion, the environment, and, of course, the power of suggestion all operate to determine the effectiveness of the drug.

Jung on display

The life of Carl Jung, eminent Swiss psychiatrist, and his pioneering role as a therapist are the subjects of an exhibit which will be in Cal. State, San Bernardino Library starting Saturday, Jan. 22.

The panel display, circulated by the Smithsonian Institution’s Traveling Exhibition Service, will remain in the Library through Feb. 22.

Photographs of Jung, his family, his colleagues, his journeys and the retreat he built for himself are accompanied by text which explores his outer and inner worlds. The exhibit will continue through Feb. 25. Gallery hours are 10 a.m. until noon and 1 to 3 p.m.

Art from different ink shown

Ink made of earth from different parts of the country “exhaustion” pieces and color, document the experiences. Kerzie will show abstract paintings done in encaustic (wax and oil) that deal with color and the creation of color energy, using the dot system. All of the works are large or very small placebos and those injected rather than administered orally are there if the drug is administered by a physician, his or her attitude is unimportant. Generally, the more expensive, the better the effect. A snob appeal in drugs.

Even surgery can be a placebo. In one reported study a surgical procedure of tying the internal mammary artery to treat angina pectoris was found beneficial. Later in a double blind study at the same hospital, half of the patients undergoing the operation, had all the surgical procedures done except the artery ligation. All of the patients going to surgery got better. Comments on 'dialogue'

Dear Professor Blackey,

I would like to comment on the "dialogue" between Jim Austin and Robert Blackey. While Mr. Austin's review of Mr. Blackey's book was a hatchet job, I found Mr. Blackey's response sorely lacking.

While the substantive issues of Austin's review are not the main thrust of the "dialogue," if you look at Mr. Blackey's "response" you will notice that he does not focus on any substantive issues Austin raised. After disdainfully labeling the review a "diatribe," he decides after "reflecting" to pin the label of McCarthyism on Austin. I must admit to adopting the same strategy in brining in Ron Ziegler and labeling his opposition a "dis respect for the courts." Instead of analyzing the book's contents, Mr. Blackey then retreats to a typical academic elitism and cites various other "authorities" who enjoyed his book. Especially interesting is the part Mr. Austin's response to Austin's charges that Blackey contradicted himself. Mr. Blackey does deny the charge but rather refers to another academic who assigned the book. Whether the book is assigned or not at Duke University has absolutely nothing to do with whether, in fact, Mr. Blackey contradicted himself in the book. The point is not whether something is assigned at Kent State or the book or whether another assigns it, but whether Mr. Blackey can or will respond to some of the issues Mr. Austin's review raised.

While Austin used a hatchet, Blackey is not merely "pink," he is throwing real red herrings. What kind of a "dialogue" is this?

Disappointed Student

Sterilization: a radical, realistic approach

PP: Could you describe for our readers exactly, a tubal ligation is?

Student: Sure. In the female anatomy, the Fallopian tubes are an egg every month. One month the egg travels down a Fallopian tube, the other, and so on. From there the egg moves to the uterus where it is fertilized, or not. If a woman has a tubal ligation, or as it is called more commonly "having your tubes tied," the Fallopian tubes are made inoperable. That is, they no longer provide a passage way for the egg. And if the egg can't get to a uterus where it can be fertilized it is impossible to become pregnant.

The operation is comparatively simple too since versus twenty years ago. Now a woman does not even have a scar. Dr. Jack the Ripper had had a go at it.

PP: Does the operation in any way alter your sexual desire or performance?

Student: Only positively. It totally relieves all fear of unwanted pregnancy. Therefore, the sexual act is free of tension and worry. It's also great because I'll never again have to go through the nerve-racking control pills or worry about the cancer threat. An IUD (intrauterine device) has the same opportunity to come loose and lodge itself in my uterus, and with the same -------. And if the damn jelly that goes with it, won't ever slip out of place again. The operation is completed by other methods is non-existent with a tubal ligation.

PP: What is the operation expensive?

Student: Well, I suppose it could vary but there is one place (via private doctor, around $1,000.00. But now there are programs that are free or very low cost, not only tubal ligations, but vasectomies as well. Information comes from the Family Planning Clinic in San Bernardino. It is not a welfare program although I doubt whether you could be Rockefeller daughter or son and be approved. Depending upon your financial situation, they will either consider you as a patient of the clinic (I am not sure of their policy)

PP: If I am interested, I'd like to ask you one more question. In general, what has the reaction been? I know that it is common in some when you told them you'd been sterilized.

Student: The general reaction from people my parent's age is negative. They say I'm too young, too irresponsible, or "what if something happened to him?" The biggest bummer in their reaction is that they are more concerned about everybody else than they are me. They are worried about future men that I've never met and whether my son needs a brother or sister. And I think to him, no other child could take his place. Nobody's asked me how I felt. On the other hand, people close to my age are very receptive. They tell me that before we are of any value to anyone else we have to be at our best. My best friends have had tubals - one has one child, the other..."!

PP: I want to thank you for your time. Your decision certainly seems relevant in the face of today's chaotic world. Do you have any further statement?

Student: Just one thing, concerning again my "quality versus quantity" concept. Everyone believes in quantity. But I want to put it out of my mind. But this is a consumer oriented society. We've always lived by "the more, the better." It will be a big task to change old concepts. Right now, I've got to worry about my study exams.

Foreign film

Fernandel is the star of a French film, "The Wild Oat," which will be shown at Cal State, San Bernardino Saturday evening, Feb. 12.

Part of the continuing foreign film series sponsored by Department of Foreign Languages, the comedy will be presented at the Education Center without charge at 7 p.m. in the Lecture Hall of the Physics Building of the University.

What the film has English subtitles.

Setting for the story is a small town in Provence which is in an uproar when the local sheriff has a young unmarried girl.

Fernandel, as the town's only bachelor, is outraged when many townspeople accuse his recently conscripted son, and in retaliation he refused to sell bread to the accusers.

The film examines the absurd feud, as each half of the town boycotts the other.

And I'm sure he could, quoting some part of each paragraph and then conclude with a proof of my abysmal ignorance because some other professor did so.

Our esteemed professor is certainly not the only offender in this regard. I have and then I hear some professor dropping names suggesting his intimacy with such great figures. I've heard individuals denounced because they didn't have certain academic credentials (Did he have a Ph.D., Ideas have been rejected without further discussion because they weren't "academically respectable."

This is not to say that expert opinion is to be ignored or disregarded. However when doubt arises or a point is in dispute, those to be convinced have the right to see some of the same evidence and not be told to take it on someone's says.

Another issue of Blackey's intellectual tools is even more hazardous: its language. Hence, responses. References to "McCarthyism" and my world view being "simplistic" fail into the category. As far back as I can remember, right wing views have been denounced by liberal professors as being simplistic. No, it's simplistic which has never been defined as to why that is the case or if so, why that should be a problem, and I doubt that any will ever be. (Some creativity was shown with regard to the term, "Manichean.") My congratulations. Now if only I knew what the problem was.

Education is supposed to equip students with intellectual tools to seek the truth, or so I've heard over and over again. Three or four years ago.

The question is what do they do with all this education...what is the name calling, nameless and knucker's slogans are considered appropriate tools for intellectual discourse?

Postscript: I've noticed that certain individuals in articles and conference have referred to me as a "revolting" (PawPrint, Jan. 12) as a "hatchet Job." One thing all this is, none of them has read the book in question. Just the same, I have this overwhelming curiosity as to where the notion that a book review is supposed to be a "mortar job" indicating what anyone else came from. At least some of my favorite books have not received that treatment.

At any rate, the question is not whether the review is biased or objective, the one thing it is true or not. If there is anything that I stated in my review was extremely, I'm still waiting to hear about it.
GSU.exists

Things to do at the GSU
Tuesday, Feb. 1
Meeting and Program. Topic: "What's it like to be a lesbian mother?" Also: Trip Info.: Make reservations for the LA production of "CHORUS LINE". Students and non-students welcome for trip, PS-105, 12 noon.

Friday, Feb. 4
"Gay Person/Straight Person." A rap session for straights and gays: "How different are we?" Come and find out at C-219, 7 p.m.

Sunday, Feb. 6
The GSU goes to church. What's a church with a homophobic outreach really like?
Morning: Visit Riverside's Trinity Metropolitan Community Church.
Evening: Visit LA's Metropolitan Community Church (The Mother Church)
ATTEND ONE OR BOTH!!
FOR INFORMATION, attend the Gay Student Union meeting Tuesday, Feb. 1 at 12 noon.

Campus Calendar

Tuesday, Feb. 1
ASB Senate meeting, 7 a.m., C-219.
LDSSA meeting, 9 a.m., C-219.
Gay Students meeting, 12 noon, PS-105.
Christian Life Club meeting, 12 noon, C-125.
MECHA Club meeting, 1 p.m., SS-171.
Activities Committee meeting, 3 p.m., Activities Office, ASB Trailer.
Cal State Folk Music Club meeting, 5 p.m., C-104.
Serrano Village Council meeting, 6 p.m., C-219.
ASB Executive Cabinet meeting, 8 p.m., SS-171.

Wednesday, Feb. 2
Early Childhood Club meeting, 12 noon, C-219.
Young Libertarian Alliance meeting, 8 p.m., PS-105.

Thursday, Feb. 3
LDSSA meeting, 9 a.m., C-219.
Information meeting on RPT procedure, 12 noon, C-104.
Woodpushers Anonymous, 7 p.m., SS-Atrium.

Thursday, Feb. 4
Co-ed 2 on 2 basketball begins (P.E. Dept.)
BMC Volleyball, 3 p.m., Large Gym.
Film: "Kelly's Heroes" (PG), 6 p.m.; 8 p.m., PS-10.
Basketball Game: Coyotes vs. King Fubars, 7 p.m., Large Gym.

Saturday, Feb. 5
"Escape '77" Kings vs HNL Champions Montreal (Details SS-143).
BMC Volleyball Game: Students vs faculty, 3 p.m., Large Gym.

Sunday, Feb. 6
Music Dept.: Haris Quartet, 7:30, PS-10.

Friday, Feb. 4
ASB Senate meeting, 7 a.m., C-219.
LDSSA meeting, 9 a.m., C-219.
Gay Students meeting, 12 noon, PS-105.
Christian Life Club meeting, 12 noon, C-125.

Sunday, Feb. 6
Music Dept.: Haris Quartet, 7:30, PS-10.

Monday, Feb. 7
Information meeting on RPT, 2 p.m., LC-500.
Reception for Art faculty of Cal. State Bakersfield, 8 p.m., Art Gallery.

Fashion Show

By Cookie Pollard
There will be a fashion show sponsored by A.S.B. Activities, Feb. 8 at 12 noon. Refreshments will be available.
Models will be wearing clothes from Ragtime Clothing Store located on Golden Ave., San Bernardino. The models are male and female. The clothes are student oriented, casual and low priced.

If you are going to audition for the Talent Show sponsored by A.S.B. Activities, please fill out this form and drop it by the Activities Office:

By Laria Diefenbach

“A” BASKETBALL

The league play hasn't yet begun. But there were scrimmages (Practice games) last week.

This year's league looks to be one of the “highest” key competition in years. For a couple of the teams, and a few players there doesn't seem to any love lost.

The “Best”, last year's champions, who are led by Ted Saar, the Hap Breit's and Greg Thompson are on the poll position, but it's too even to call.

By Laria Dieffenbach

“B” LEAGUE

In a fantastic come-from-way-behind victory, Mark, the losing ASI presidential candidate, Wormack — who scored 12 points in the second half — led his Waltermann team past the old hapless faculty.

The faculty was led by Person who hit the boards hard and scored eight points.

This year's league looks to be a mixture of the two teams that comprised last year's league.

The other team, coached by J.C. Wright is all newcomers to basketball except their leader, Sandy Brodock.

As I watched the scrummage, it became apparent to me that, at least until Sandy's team had more practice the games would be one-sided.

But the onedimensional of the games would only entail the scoring. The teams seemed to enjoy the game. Diane's team for the game itself while Sandy's team enjoyed more in the game for his team.

More women are still needed. If you ask any of the women who aren’t thinking of themselves are more suited to a game with more purpose like Old Maid or Rummy.

WOMEN'S BASKETBALL

Dianne Bloecher's team is a mixture of the two teams that comprised last year's league.

The other team, coached by J.C. Wright, is all newcomers to basketball except their leader, Sandy Brodock.

As I watched the scrummage, it became apparent to me that, at least until Sandy's team had more practice the games would be one-sided.

But the onedimensionality of the games would only entail the scoring. The teams seemed to enjoy the game. Diane's team for the game itself while Sandy's team enjoyed the exercise for his team.

Wright said after the game that his team had more practice and became more competitive with practice, and this would put even more enjoyment in the game for his team.

The game was over before it started with Preston dominating the court. Campus Director of Upward Bound, Preston dumped 10 of the 25 field goals made during the first half with O'Brien not far behind with six. The half time score was a weighty 51-38 for the KFM Disc Jockeys trailing miserably.

The game soon dissolved into slapstick comedy as the DJ's were no match for Blackey's son. At one point, the visiting team lined up under the basket as they waited for Preston to make a foul shot. The antics proved amusing, but offered a less than exciting game.

Half time activities seemed a bit silly as the ticket seller got the door prize, a pewter mug. Other novelties including an annual tournament. "Big Tuesday" which is sponsored by the Intramural Department, takes place each Tuesday at 6 p.m. in the upstairs recreation room of Merongo Dorm.

Opal Groce, who earlier in the day had aced her lab midterm, scored through a field with a perfect record of 6 wins and 0 defeats. The closest match in the tournament saw London's

Preston Jr. drops to score

In the race for the Hatchet, Mike Shaffer did an outstanding job filling out with about 5 minutes left.

But Kareem Abdul, given of the Beavers, graven by Tuesday, exhibitions of basketball since the “Who Cares” team. He fouled out just minutes into the second half, and had only 3 points against his ex-mates.

This person seems more suited to a game with more purpose like Old Maid or Rummy.

Dee Jays wiped out

By Linda Watson

The “Who Cares!” had a chance to set the record and screwed up. To hell with teamwork now, I’m gonna get me a 3-pointer! Who cares about the game!!

Shaffer and his nearest competitor, Marquardt of Korn, Myers and Jim Roessler — who hit the boards hard and scored eight points.
