Health Center closing for summer

by Charlene Hurley
Chronicle editor in chief

The Health Center is closing this summer, interrupting the continuity of health care and medications for students who are dependent on its services.

Students who use the services of the Health Center at Cal State, San Bernardino will feel the effects of the budget crisis when it closes its doors during the summer months of July and August at the end of this school year.

With a tuition increase and a student fee increase already a reality, the students will now face seeking outside medical care and pharmacy services for those two months.

Vice President of Student Services Doyle Stansel said, "We (administration) have been looking at ways to save money to provide better services during the school year and this was seen as one area where we could reduce expenses.

The Health Center currently provides students with many services. Students can call for an appointment to see a physician or a nurse at no cost. The physicians at the Health Center can treat problems ranging from minor medical problems such as colds and bruises to extensive gynecological exams.

The pharmacy also offers various services to students. Neal Farber, the pharmacist in charge, fills Health Center prescription medicines, sells over-the-counter medication, and supplies many types of birth control devices. He is also in charge of a library of resources that students can use to get information on topics concerning AIDS, diet, smoking, and cancer just to name a few.

In past years, the Health Center was open all year round with a small break at Christmas and a break in August. Regular continuing students could be seen by a nurse during the summer for treatment of minor medical problems, or to get over-the-counter medications at cost.

Senators feel strongly that they should voice their opinions to the proper authorities.

If students feel strongly that they should voice their opinions to the proper authorities.

Black = off-campus price; Blue = closing CSUSB pharmacy

Propranol $17
Birth control $120
Rector $20
Erythromycin $13

Next quarter, this smoker will not be allowed to indulge in the Pub.

Smoking prohibited next quarter

by Amy Heritage
Chronicle staff writer

Smokers will not be permitted to smoke inside any building beginning next quarter. This policy will apply in all buildings owned or leased by Cal State, San Bernardino.

Beginning April 20, the Pub, Commons, breakrooms, conference rooms, restrooms, lobbies, hallways and stairwells will become smoke-free.

Violators will be asked to move outside or extinguish their cigaretttes, and will be subject to disciplinary action.

Those who work for the university could be subject to suspension and/or termination if violations persist.

Senate considers move to semester calendar

Committee will study and report on feasibility

by Steven Jennings
Chronicle photography director

The Cal State, San Bernardino, Faculty Senate passed a resolution to examine the costs and benefits of changing the school's academic calendar to the semester system. The resolution established an ad hoc committee to study converting CSUSB from its current quarter system to the semester system.

After the committee examines the merits of both systems and if they recommend switching to the semester system, they will offer suggestions as to how the conversion should proceed.

Education Professor Esteban Diaz, a member of the Faculty Senate executive committee, said the topic of conversation rose out of normal executive discussion. He said the switch has been seriously considered during Senate deliberations of the past.

"Particularly during the school's changeover from the five-unit to our current four-unit system, there was talk of switching to semesters," he said. "But at the time, consensus was that it wasn't a good idea.

Diaz has been approached by some of the education faculty with an interest in changing to the semester system. He attributes this to their past experiences with semesters.

"It has come up again because we have so many new people with the desire to go from quarter to semester," he said. "Most of them came to CSUSB from schools with academic calendars on that system.

Diaz explained that the issue would remain just a topic of discussion if not for the interest shown by Faculty Senator John Craig, former chair of the Chemistry Department.

Craig proceeded with this issue on his own initiative," said Diaz. "He proposed the ad hoc committee to study the possibilities and their ramifications.

Craig said that he probably did make the motion, but says he does not yet support the switch.

"I'm advocating the study of the switch, not the switch itself," he said. "Right now I'm on the fence; I see advantages to both sides.

The Faculty Senate set guidelines for the committee to focus their investigation, including affects on session starting and ending dates, holidays and vacations.

Foundation grants subsidizes cut programs

The Chronicle, CSUSB, March 13, 1992

The Cal State, San Bernardino, Foundation Board recently approved the Foundation Professional Development Awards Program to provide funds for faculty and staff development. These funds were made possible through Foundation operations on campus such as food services, vending, and the bookstore.

"It is not part of the University. It is a separate non-profit organization which allows the University to conduct business where the State does not. Such as food, bookstore, and grants," according to Vice President of planning and development, David DeMauro.

An initial allocation of $100,000 is available for assigned time for faculty, specialized professional training, travel and equipment. The awards will likely be made in amounts up to $3,000.

"The Foundation takes revenue from services then helps the campus meet its needs. There has been no money this year in 1991-92 for special faculty development. The teachers need to stay current," DeMauro said.

Many teachers writing papers or books need the money to complete research. Travel and equipment are very expensive, the Foundation can help fund these programs for faculty and staff.

President Anthony Evans has authorized the Foundation to expend up to $90,000 for faculty professional development and up to $10,000 for specialized training and development for university staff.

"The states continuing budget problem is increasing in volume," said DeMauro.

However, the Foundation's budget is increasing.

"More students are attending this school, which means more students are buying books and food," he said.

This new program will help the University in maintaining quality academic and support programs which will place a high priority on professional development and career enhancement at this university. With the decline in state funding, this program has come at a very good time.

Applications for the program should be submitted in memo format to employees respective divisional vice presidents.

AKΨ launches spring agenda

Since 1972, Alpha Kappa Psi has been helping students pursue degrees in Business Administration. Alpha Kappa Psi provides direction and support for its members. It achieves this through professional events, social activities, and a brotherhood with a network of individuals who possess similar interests and ambitions.

The objective of Alpha Kappa Psi's professional program is to effectively inform, educate, and interest members and others in the various phases of business. This helps members and others in the people by exposing them to the business environment, allowing for a smooth transition from college to the real world.

If you are interested in becoming a part of this fraternity, Alpha Kappa Psi will be conducting Rush for the first two weeks of Spring quarter. For more information, call the Alpha Kappa Psi hotline at (714) 887-9609.
Formal complaint still may be lodged

PETA suggests treatment improvements

by Steven Jennings
Chronicle photography director

The national animal rights organization People for the Ethical Treatment of Animals recommends actions that Psychology Professor Stuart Ellins can take to improve the conditions in which the four coyotes on campus are being held and requested he respond to the suggestions.

After receiving Dean Louis Fernandez’s letter in which he responded to the organization’s concerns about the welfare of the animals, PETA caseworker Mary Beth Sweetland consulted with Doctors Michael Fox and Eric Klinghammer, experts on canines (animals of the dog family, including coyotes).

She advised the doctors of the situation with CSUSB’s coyotes and asked for their opinions on the situation. They concurred that the release of the animals seemed impossible, but suggested improvements that could be made to the coyotes present surroundings, improving their quality of life.

Sweetland then relayed the information she obtained to Ellins in a letter dated Feb. 21. In the letter, Sweetland agreed that the animals surroundings needed improvement.

"This needless and wasteful redundancy is a prime example of researchers not wanting to use other people’s studies at the expense of animals," she said.

Sweetland has also discovered what she feels is a “discrepancy” between university supplied documents and federal reports. According to the "Application for Care and Use Teaching and Research Animals" supplied to Sweetland, the dates for the project are for several months in 1989. Sweetland says that the 1989 USDA annual report for CSUSB does not reflect figures for jack-rabbits or cottontails.

"This discrepancy may prompt me to lodge a formal complaint with the USDA sometime this month," she said. "They are required by law to report all animals killed and they aren’t."

Sweetland said that poor record keeping can reveal an underlying problem.

"Because of your assurances that you care about these animals, I am confident you will find these easy devices of no consequence in terms of time or money."

-PETA Caseworker Mary Beth Sweetland

Sweetland said that she has received letters from CSUSB students, attacking her accusations of wrongdoing by Ellins.

"People may think it is petty for us to pick on a school like CSUSB that doesn’t do much animal research," she said. "But needless research is still needless."

Three attempts to contact Ellins have been unsuccessful.

Student leaders selected

The New Student Orientation Planning Committee has just completed its recruitment and selection process for New Student Orientation leaders. The planning Committee consists of nine students and Carol Lundberg, student life coordinator. Sixty students were chosen to serve as student orientation leaders. They are required to attend a weekly training session in spring quarter and two training retreats in preparation for their service at New Student Orientation. During New Student Orientation, they serve as group leaders, tour guides, discussion leaders, and as a friend to incoming students.

New Student Orientation will take place September 11, 12, 18, and 19 for freshman. A transfer program will take place September 16 followed by a program for re-entry students September 17.
Health cuts unjustified

Campus administrators announced the student health center and pharmacy will be closed during the summer months to students.

Cutbacks in services go hand in hand with fee increases so it is no surprise to students when the administration makes another cutback.

But this time campus officials have gone too far. Students rely on the health center in varying degrees, from filling prescriptions to giving primary health care. All students will suffer from this loss in the summer, but none more than female students who purchase their birth control pills from the Health Center’s pharmacy.

Female students have a great need for the low cost services and pharmaceuticals offered by the Health Center. To prevent students from accessing these cost saving health care alternatives while at the same time raising fees is preposterous. The administration is trying to charge more and offer less.

Students have a need for inexpensive medical care. This need is urgent when facing the 40 percent fee increase proposed by the Cal State Board of Trustees.

Campus officials have been presented with a number of proposals that would allow them to satisfy the needs of students, but they have been dismissed or ignored. Perhaps the most sound suggestion arises from a question we can all ask ourselves.

“Would we rather have green hedged lawns and pruned trees or a health center year round.”

Students are willing to sacrifice a little groundskeeping in exchange for keeping the health center and pharmacy serving students year round.

Visualize a campus where all students have equal access to the health center, including summer session and evening students. Students must act and act now to prevent this injustice from happening this summer. Contact campus officials over the phone, by mail or in person if you have to and voice your desire to keep the health center and the pharmacy open in the summer.

Students will gladly let the lawn gel a little more shabby, brown and weedy to keep the health center available year round.
One feminist's point of view
Man-hating and bra-burning myth clarified

March is Women's Month, a celebration of the accomplishments that women have made, and a time for awareness of the social conditions that women live in. Some this sounds like a negative step that women have earned for gaining equality in our culture, but step that women have earned in some this sounds like a positive creates mental pictures of angry women that hate men and burn their "Feminist" has become "Feminist" has become "fellowship" to "personship," but some feminists are few and far between. Unfortunately this small percentage of women have created such a bad stereotype of feminism that many women are embarrassed to label themselves with this name.

Society needs a clarification of what feminism is to women who aren't as radical as the militant feminists.

Feminism is having self-confidence in yourself and not being dependent on a masculine society.

Feminism is believing that women are just as intelligent, hard-working and capable as men are. This is not to be confused with the idea that women are superior to men. Women and men are equal, not superior or inferior in relation to each other.

Feminism is not the objection to men opening doors for women.
'Pi A Sig' raises money

by Kim Kates
Chronicle staff writer

Alpha Delta Pi sorority and Delta Sigma Phi fraternity spent their afternoon intentionally throwing whipped cream at one another in front of the library on Wednesday, March 11.

The event was the "Pi A Sig" fundraiser where students could pay money to throw whip cream pies in the face of any of the designated human targets. Several ADPi's and Delta Sigs volunteered to sit in chairs lined up in front of the library and get "creamed".

The main goal of the event was to raise money for each of the groups' philanthropies.

Alpha Delta Pi's philanthropy is the Ronald McDonald House and Delta Sig's philanthropy is the March Of Dimes. The money that they make from "Pi a Sig" will be divided between the two organizations.

The event started at noon and went until most of the whipped cream was gone. There were many good sports out there willing to get dirty. Grimes added, "It looks good that women can get up there and get involved too."

The tickets were fifty cents or three for a dollar. Many people bought a whole bottle of whipped cream in order to make sure they had enough for all of the people on their hit list.

Grimes, and present social chair for Delta Sig, Chris Calero, felt very positive about the event and hoped that everyone who participated had a very good time.

Students form a new business
Letters and shirts personalized

by Amy Heritage
Chronicle staff writer

What is A'What? Besides being a slang phrase, A'What is a new shirt design business begun by five Cal State, San Bernardino students.

A'What specializes in original designs for greek letters, and provides customized silk screening.

"I think non-traditional style gives you more character. Your letters can tell a lot about your personality," A'What founder Bernie Babasa said.

Typically, A'What's letters are two inches taller and two inches wider than traditional letters, but Babasa said the company can design whatever size the customer desires. A'What provides options such as having the organization's name spelled out, having the chapter name on the shirt and having organizational symbols on the shirt.

A'What will design shirts for any campus organization.

"We're not trying to be like a Greek Company, we're trying to do shirts for anybody," Tim Debevec said.

A'What provides original designs.

Debevec holds a degree from the Phoenix Art Institute. He and other A'What founders, Babasa, Bernie Babasa, Jody McDonald, and Mark Fransisco, collectively handle both the technical and business aspects of the company. Babasa feels confident about A'What.

"It's going to work out well because a lot of people pay so much at the competition, and we have good prices," Babasa said.

A'What's basic shirt costs $25 while a silk screened one runs to $29.

"The competitors don't offer much in the way of choice. They don't bend or customize for anybody, we're trying to not be traditional because not everybody is alike, and not everybody likes the same designs. If customers can design their own shirts and be totally happy with them, then they'll keep coming back," Debevec said.
Above: This steel girder structure will become the campus's largest facility, the Business and Information Sciences building. Left: This diesel-powered crane is used to lift heavy steel beams into position on the new building.

Friday 9:00-5:00
KSSB offers diversity

by Lee Romano
Chronicle staff writer

KSSB radio station at Cal State, San Bernardino, has come a long way since its inception in the mid-eighties. Professor Rob McKenzie came to CSUSB three years ago to teach in the Communication Department and to be KSSB advisor. At that time, according to McKenzie, KSSB was a cable station on two different frequencies.

The signal was of poor quality back then, but the problem was eventually discovered to be in the phone lines. After that problem was conquered, the next step was to convince one of the cable companies that carried the station to buy new equipment so they could broadcast KSSB on the same frequency as the other cable company - 106.3 FM. That problem, too, was conquered and KSSB was on its way. In April 1991, the station went to a broadcast signal on regular FM radio and can now be heard within a mile radius of the campus.

McKenzie complimented the administration, Dean Hendricks in particular, for being “very supportive from day one.” He also praised engineer Tom Richards. “I don’t know where the station would be without him,” McKenzie said.

Today’s programming at the radio station is diversified. This means that there are a lot of different types of shows. McKenzie changed the format when he became advisor. He feels that “trying to get the biggest audience in college radio is a mistake.” By diversifying the format, student DJs get to play the music or do the shows that interest them, which in the long run is more beneficial to the students.

KSSB Station Manager, Brian Murphy, agrees with this strategy. He said, that’s what bred all the different shows that the station has today.

The formats vary from Alternative to Country, from SportsTalk to Classical, and from Rave to Top 40, just to name a few. According to Murphy, Top 40, Disco and Rap were all born from Rock-n-Roll, as in Elvis Presley-type Rock-n-Roll. Regular Rock begot Heavy Metal which begot Classic Rock. Alternative is similar to Heavy Metal, but not “as grinding,” according to Murphy. Rave is a new genre which is an off-shoot of Alternative, and, finally, Thrash Metal is faster and harder than Heavy Metal, but with more of a message. Got that?

Jesse Robinson, also known as “Mischief,” describes the music that he plays, “Hip Hop,” this way: “It’s like a culture – it’s music, clothing, attitude – for younger people as well as older.” It started in the early eighties and is “a fusion of all music.” Robinson says that the artist can take “any kind of music or a collage of music and turn it into something new.”

In general, it seems that the DJs at KSSB, as well as the advisor, have the same attitude toward diversification. Different is good - and it’s all a lot of fun at Coyote Radio - KSSB 106.3 FM.

Counseling and Career Center helps students

by Renee Groese
Chronicle editor in chief

Keith Johnson, director of special projects career counselor, at Cal State, San Bernardino, makes an effort to assist students each day.

Johnson has been at the Career Center for the past six months. Before that, Johnson was Director of Special Projects for Extended Education. As a career counselor, Johnson advises students who come into the center wondering where they will go after completing their major, or he advises them on finding out what skills they excel at, which may help them find the job they want.

"The Career Center has three phases to it," according to Johnson. There’s the job placement, interviews, job fairs, and resumes, which is under the direction of Johnson.

The way in which Johnson helps students with their skills and future job outlooks is by preparing them with work sheets and short inventory tests. The STRONG inventory test asks various questions about occupations, school subject interests, and leadership abilities. Johnson also gives work sheets such as a life goals questionnaire, work values, and what Johnson calls a “Hot Career Opportunities in the 90’s and Beyond” which lists several careers that are available in accounting, sales, social sciences, etc.

Johnson said, “Students need a career counselor. They need someone to talk to who can help them find the job they want.” Students who are business majors (or other majors) should find out ahead of time if that’s what they want to do.”
Contraceptive awaits approval
Female Condoms a 'REALITY'

New forms of birth and disease control are desperately needed. While, other countries are considerably more progressive than the United States, we now have more birth and disease control options available. Norplant (implanted 5 year contraceptive) and the cervical cap are among the fairly recent available birth control methods, however, the female condom is the newest. The female condom is the only disease control available to women.

It is a device designed to allow women to protect themselves from sexually transmitted diseases—excluding AIDS. The condom is called "REALITY" and is a pair of loose fitting lubricated polyurethane rings. One of the rings, about two inches in diameter, lies inside the condom. It is used by inserting the condom and anchoring it inside the body, much like a diaphragm. The other ring, about two and three-fourths inches in diameter, forms the outer edge of the tube and lies outside the vagina. Once placed inside, the device covers the entire internal vaginal wall and the labia during intercourse. It does not require a spermicide as does the diaphragm and the cervical cap.

One study on 81 women using the condom for over six months, showed a pregnancy rate of 15 percent, or 15 out of every 100 in one year. However, it is suspected that the 15 percent is due primarily to user failure; not wearing it correctly or not wearing it at all; than to product failure. The diaphragm and the cervical cap have a failure rate of 18 percent, the male condom has a failure rate of 12 percent and the pill has a failure rate of 6 percent over a year. There was not any instance of a sexually transmitted disease being contracted while using the female condom.

While "REALITY" has not been approved in the United States yet, a federal advisory board panel has recommended approval. The Federal Drug Administration has final approval, but advisory panel recommendations are usually quite influential. The condom is manufactured by Wisconsin Pharmaceutical Co. of Jackson, Wisconsin and Chicago. It has already been approved in Switzerland and is expected to be on the market early this month, in France and Britain this year.

The major drawback to the female condom is its' price. One female condom, for a one time use, is expected to cost about $2.25, compared to about 70 cents for a male condom, and about $1.50 for a Today sponge. The company estimates that an average year's supply would cost about $180-$190, compared to about $200 or more for birth control pills.

Some people feel that women have to take full responsibility for birth control and now are being urged to take more responsibility for disease and that the female condom is a step backward for male responsibility. Personally, as a woman with the medical knowledge that women are more vulnerable to sexually transmitted diseases than men, that it is easier for a man to infect a woman with AIDS than the other way around, I wouldn't want to rely on anyone else. The more birth and disease control options available the more women that will be able to find a method that they are able to use and are comfortable using.

Anonymous questions can be sent at or mailed to my mailbox in PS 210, or you can call in questions at 883-9614. The questions will be printed verbatim if possible. Please participate! The information in this article was based from several articles in the Los Angeles Times and Human Sexuality by Master, Johnson and Kolodny.

Wright is a graduate student in psychology at CSUSB.
"So what's up for Spring Break?"

This question is becoming more common as winter quarter draws to a close. Final exams end on March 20, and spring classes begin on March 30. This week gives students a week in which they can party till they drop, take a vacation to an exotic paradise or just plain relax.

Most people try to combine all of these activities. The choice for many vacation seekers is to travel to a fresh, if not distant, location and have some fun.

Below are a few places that vacationers visit, both locally and outside Southern California. Whatever your idea of having a good time is, chances are that you can find it in at least one of these areas.

**Parker Strip/Lake Havasu:**
Water sports are the most popular pastime here. You can choose to float with the current, or you can take a powerboat for a wild ride and even water-ski. Garishly painted boats can be seen racing one another at any time of the day, filled with scantily-clad bodies.

If the water is not your thing, both Havasu and the Strip offer some alternatives. Among other attractions, Lake Havasu's claim to fame is the London Bridge. This is the original bridge that was brought over, stone by stone, from London, England. It is surrounded by novelty shops and carnival-type rides.

Parker Strip does not have a big-name attraction, but it does have many off-road trails for the avid dirt-demon. The trails range from loose gravel to deep sand dunes, so be prepared for some hard riding. One of the most popular trails stretches all the way up to Needles, California.

Average weather for this area is 90 to 100 degrees, little wind, and even less cloud cover. It is a good idea to take along your sunscreen and plenty of liquids.

**Palm Springs:**
This place is definitely for the party enthusiast. It is a 24 hour party here. The streets are filled to capacity with motorists either with the top down or with their tops off. The cars go up and down the main drags, Indian and Palm, at an average speed of slow. Pedestrian traffic is a little bit faster, but is still "bumper to bumper."

The Oasis Water Park truly is an oasis for the people who are not into the party scenes. You can ride the chutes and slides, swim in the pools or just relax in the sun here. There is a charge for admission to the Oasis.

Temperatures here are a little cooler than Parker, but they still can reach the high 90's. The wind is more of a concern, but it does little to cool you off.

A word of caution about Palm Springs - COPS. The police in Palm Springs are becoming more and more oppressive in their efforts to reclaim the city from the Spring Break crowds. They may catch you if you do something illegal, and that could easily ruin your vacation.

**South Padre Island:**
Sometimes you can have a better time in a paradise that is just beginning to party. As the more widely recognized areas become passe, South Padre Island is booming with an overflow of tourism. It is located off of the southern tip of Texas, and it is only 10 minutes away from the Mexican borders.

Cosmopolitan magazine must have done some promoting for South Padre Island because the females customarily outnumber the males by about three to one. For ladies, this could give you an opportunity to just mellow-out in the sun without being bothered by libido-led males. For you guys, this could be heaven on Earth.

There are warm beaches here.

---

**On the spot**

*What are you doing for spring break?*

- **Jeff Downing:**
  "I'm going to the river with friends from school. I'm planning to get tore up from the floor up. I'm totally excited. It will be great to get a break from school."

- **Chris Corsentino:**
  "I'm going to the river on a houseboat with some of my fraternity brothers for a week. We're just gonna have a good time, eat, drink, and gain a few pounds."

- **Tracy Draper:**
  "I have a condo in Lake Havasu with four of my sorority sisters, my brother, his friends, and all their boats and jet skis. We're gonna party and lay out if it is sunny and get really tan."

- **Michelle Malody:**
  "I am going to see my brother, he goes to school at Norte Dame. We're gonna tour the campus and just hang out because we haven't seen each other in awhile."

- **Brian Murphy, Sam Price and Jeremy Hanson:**
  "We're all going to the Grand Canyon with a bunch of bros. We saw the movie and want to go check it out. We're gonna ponder life on the edge of the world."

Chronicle staff writer
San Felipe: The economy in America is seriously in trouble, but the dollar is still worth about 2,500 pesos. This translates into some inexpensive fun in Mexico. One increasingly popular Mexican resort is the port town of San Felipe on the Baja peninsula.

The drive to reach San Felipe is a little more than six hours and the roads are not all that great once you cross the border. Once you get there, however, your traveling woes are forgotten.

The beach plays a big part in the excitement, but most of the fun is generated by the people. The locals are very friendly to tourists, which is good news for those of you accustomed to dealing with the locals in Tijuana.

Prices in all of the shops are negotiable and bargains are readily available. Food is also cheap. Fresh seafood is most common and the quality is very good.

One object of attention in San Felipe is a large unused lighthouse. There are steps winding up the hill that the lighthouse stands on, enough to make a hiker sweat. Once you reach the top and view the ocean and surrounding countryside, you will agree that the trek is well worth it.

Nightlife in San Felipe is centered mainly around the club "Rockodile's." This club is filled with college students and features an outdoor volleyball court. Legal drinking age in Mexico is only 18 so just about all college students are able to get into the clubs with no problem. It would not hurt to bring your I.D. with you, just in case.

The heat is not as blistering here, due to a slight on-shore breeze. High 80's to low 90's are the average, but again you are surrounded by water so be prepared for rapid weather changes.

Daytona Beach: Last but not least is the Spring Break mecca, Daytona Beach, Florida. This is probably the hardest partying place in the whole of North America. You begin celebrating as soon as you get off of the plane, and you do not stop (or remember stopping) until you are ready to leave.

There is no way to tell you how much fun you can have in Daytona, you just need to go and see for yourself. You can enjoy the sandy beaches, walk along the boardwalk, shop in all of the "factory outlet" novelty shops or just stay inside of your hotel and party with all of your neighbors.

Whatever you decide to do, remember this: the police in Daytona Beach are not excited about thousands of students tearing up their town, so be careful. If you get out of hand, the police can arrest you for even minor violations; they have even held people overnight for jaywalking.

Besides the threat of arrest, the only other drawback to Daytona Beach is how to get there. If you fly, the cost is monumental. If you opt to drive, it will take you between four and six days. You can adjust this time, depending on your speed and stamina.

Temperatures are moderate, about 80 to 90. Clothing is totally optional, but sunscreen is not.

No matter what you do this Spring Break, remember that classes start up again on March 30. This really only gives us a week off, and the new classes will begin even if you are late returning.

Aaron Brady: "Maybe if I have money, I'll go to Mexico - San Felipe. Party big with lots of drinking. Ride A.T.C.'s and basically kick back and enjoy the sun."

Jason Bolt: "I'm going skiing in New Mexico with some friends. We're staying for 8 days. It will be filled with celebration and living good life with friends."

Stacey Bloomberg: "I'm going with a lot of my Alpha Phi sisters to Lake Havasu to party on a houseboat for a week. I want to get a tan, just relax, and enjoy the sun."

Vibhuti Sharma: "My husband and I are going on a long trip to Las Vegas. We plan on staying there 4 days. I'm a slots person, and my husband is good at the tables."

Nomi Zeaeer: "First I'm going to sleep. I have to go shopping for something to wear for a special family party. Then I have to register, buy books, and get ready for spring quarter."
Movie sends a message

'Article 99' depicts America's failed commitment to its military vets in an oddly humorous drama

by Anthony Bruce Gilpin
Chronicle staff writer

"Article 99" is that most dangerous Hollywood commodity, a movie with a message. Director Howard Deutch (Pretty in Pink) serves up an oddly humorous drama which is an indictment of America's failed commitment to its military veterans. The result is an uneven, but entertaining and important film.

Ron Culer's screenplay is certain to spark controversy. "Article 99" lampoons the Veterans Administration's attempts to hold down costs by keeping vets wandering through a maze of bureaucracy. The title refers to a fictitious regulation which promises vets "full medical benefits, however, as the diagnosed condition cannot be specifically related to military service, treatment is not available at this time."

Dr Peter Morgan (Kiefer Sutherland) is a new intern at a VA hospital, where several generations of war heroes survive by "turfing" shuttling from department to department, having unnecessary tests to stay in the hospital and off the streets.

Morgan, an ambitious yuppy, tries to avoid the influence of the hospital's resident troublemaker. Heart surgeon Leonard Sturgess (Ray Liotta) is the hospital's Robin Hood, leading a group of dedicated doctors who steal supplies and falsify records so the hospital can serve its patients in spite of itself. Sturgess keeps putting off going into private practice to keep the bean-counters like hospital administrator Dreyfous (John Mahoney) from sacrificing his patients to the bottom line.

Sturgess and his merry band (Platoon-mates Forest Whitaker and John C. McGinley) show young Morgan, psychiatrist Walton (Kathy Baker) and idealistic intern Van Dorn (Lea Thompson) how to care for patients and keep a sense of humor in a grim situation. The vets themselves join in the secret war against the VA. In time, young Morgan abandons safe conformity and adopts Sturgess as his guru.

"Article 99" owes much of its gallows humor to other movies, notably "Catch-22" and "M*A*S*H." But when Sutherland dons a olive-drab golf hat, looking just like his dad, original "Hawkeye" Donald Sutherland,—such comparisons are unavoidable.

The movie is buoyed by inspired performances from the entire cast. Standouts include Eli Wallach as a dying vet who becomes a father figure to Sutherland's young intern, Keith David as a wheelchair-bound wheeler-dealer. Lynne Thigpen and the late Julie Bovasso are riotous as seasoned nurses with little patience for inexperienced "terns."

While the style of "Article 99" is fairly standard and predictable, the film works most of the time. The script manages to be both politically enlightening and very funny (which is a neat trick.) Where it falls down is a hurried and unconvincing love affair between Liotta and Baker. Still, the important and largely undiscovered subject matter is novel enough to make these small blemishes forgivable.

Overall, "Article 99" is a winner. Don't miss it.

In prison they are the law.

On the streets they are the power.

'The Lawnmower Man'

King's latest astounds

by Will Knapp
Chronicle staff writer

Ever since I saw the first preview for "The Lawnmower Man", Stephen King's latest film, I have been anxiously awaiting its release. The preview, however, was only a tiny taste of the most amazing, mind blowing computer graphics ever witnessed on film.

"The Lawnmower Man", starring Jeff Fahey and Pierce Brosnan, is about a computer scientist (Brosnan) who creates a computer program that accelerates learning and knowledge in those who use it. His experiments get out of control when the company funding the project decides to interfere and the test subject (Fahey) begins learning so quickly that his brain is transformed from that of a complete idiot, to that of a super genius, surpassing the scientists own intelligence, and evolving into the peak potential of the human mind.

From the very beginning, the film captured my attention and kept it until the final credits rolled. The acting was great, the story was original, and the special effects were stupendous. Brosnan's performance definitely improved my opinion of his acting (especially after the lameness of "Remington Steele"). Fahey's acting was impressive as well. The script seemed filled with lines only King could come up with.

Of course the film plot wasn't even close to the plot of the book, but Stephen King films never are. After the preview, I was scared the new film might end up being stupid like quite a few of King's projects (the television movie "It" for example). Most of King's poor films don't even compare to the greatness of his latest.

This is a great film. If for no other reason, see it for the unbelievable visual effects. You won't be disappointed. The sound effects were just as amazing as the visual effects. If you can, see it in a theatre equipped with THX Lucasound. It makes the whole experience a lot more entertaining. I am really anxious to see this film again.
Pearl Jam: Another Seattle gem

New group reminds one just how powerful hard rock can be

by John Andrews
Chronicle sports editor

Seattle appears to be the current hotbed for a vibrant new, no-frills hard rock scene that, in the last two years, has given us Nirvana, Alice In Chains, Soundgarden and now Pearl Jam.

Formed from the remnants of a once promising Seattle band called Mother Love Bone, that disbanded after the lead singer Andrew Wood, Pearl Jam has the Zeppelinesque hard rock sensibility that has been inappropriately hailed to Soundgarden.

The theme of Pearl Jam's 'Ten' clearly reflects the band's attempts to come to terms with the death of Wood. Filled with dark, painful images, songs like "Black" and "Jeremy" give a glimpse of his world. But this is not another alternative descent into gloom. What makes 'Ten' lyrically rewarding is Pearl Jam's defiance of death.

The album's highpoint, "Alive," reflects a weathered optimism as it moves along with a Zeppelin-like grace, punctuated by vocalist Eddie Vedder's warm but dynamic delivery and an all too short feast of piercing lead guitar from Mike McCready at the close of the song.

Vedder may have the most intriguing hard rock voice since Axl Rose, and his resonant, hymn-like cries on "Ocean" and "Release" take you into Bono-Van Morrison territory.

The rest of the band seems to follow the rise and fall of Vedder's emotive style with well-timed attack and retreat, creating a dynamic sound that has been sorely missed since heavy metal turned up the volume and turned down the subtlety in the early eighties.

Pearl Jam reminds one just how powerful and lyrical hard rock can be.

JAPANESE: Students critique systems

Continued from page 5

it's easier to enter college than in Japan, but it's harder to graduate. In American public college, they have too many students so some of them have to sit down on the floor in class. If a student is absent three times without notifying the teacher, the student is dropped because many students wait to take the class. The situation in college is very different between America and Japan, so the students are different.

If someone asks, "Why are you going to college?" Many American students can answer but many Japanese can't. Americans study to be something. For example, a lawyer, a doctor, a teacher and so on. Of course, some of the Japanese students do the same thing, but many of us don't decide even by the end of our sophomore year. Americans enter college with a purpose but Japanese students find a purpose in college.

Sometimes American students are better than Japanese students, and sometimes, it is the opposite. Japanese students can relax if they pass the entrance examinations and they don't have to think about their future until they graduate from college. American students have a better chance if they have a purpose when they enter. I don't know which is better totally, but I am a Japanese student who has studied at CSUSB in the STAYS Program for five months, so I will go to Yasuda Women's University in Japan with a purpose and study comfortably.

SEMESTER: Change would mean 3-unit courses

Cont'd from page 1

The committee will consist of five faculty members, each elected by the Faculty Senate.

There will be one member from the Academic Affairs administration, to be appointed by Vice President Dennis Hefner.

Hefner sees the switch as a serious change for the university, affecting more than just the academic calendar.

"It will be a major conversion," he said, "and the switch will definitely change the course unit system from four units to three."

He said this is because one semester unit is the equivalent of one-and-a-half quarter units. The proposed version of semesters would consist of a fifteen week semester, two week campus closure, three weeks in which a student can elect to take an additional course for credit and another fifteen week semester.

Hefner said that if the Senate eventually approves a changeover it would be a while before the plan is carried out.

"Implementation of the plan would be three to four years away," he said.

Another representative will be selected by Acting Vice President Juan Gonzalez of the Student Services Division.

Associated Students President Michele Miller will be empowered to appoint two students to the panel, one undergraduate and one graduate student.

SIGN UP TODAY - AND SAVE!

THE SNACK STOP
Study away from the crowds, with plenty of space to spread out, in peace and quiet!

The Commons Dining Room is available for studying from 1:30 pm to 5:00 pm, Monday through Thursday.

And you don’t have to go hungry, either!

The Snack Stop features the munchies you need to keep going during those study sessions:

* Sandwiches
* Fruit
* Chips
* Drinks
* and More!

Try it today - you’ll be glad you did!

Bring this ad for a free soft drink with any sandwich purchase.

THE COYOTE CARD
USE THE CARD - AND NEVER NEED TO CARRY CASH FOR MEALS!

The Coyote Card pays big benefits when you use it to pay for meals at any Food Services operation!

* Deposit $50 - You get $55 in credit
* $75 gets $85 in credit
* $100 turns into $115!

With the Coyote Card, you’re never short of cash, and the savings get better the more you deposit!

To get a Coyote Card:

1. Come to the Food Services Office in the Commons.
2. Deposit $50, $75, or $100 to your new account.
3. Present your card whenever you make a purchase, and we’ll automatically deduct the purchase from your account.

THE COMMONS
The Commons isn’t just for the dorm students - everyone can take advantage of the value and quality we offer!

All you can eat, or ala carte, we offer breakfast, lunch, and dinner at an affordable price.

* Salad Bar
* Dessert Bar
* Deli Counter
* Entrees and Vegetables
* The Grill
* Beverages Galore

PHARMACY:
Continued from page 1
The closure of the Health Center will have a significant impact on women who purchase birth control pills at the Pharmacy.
Three cycles of pills that cost a patient $4 to $7 at the Health Center pharmacy will cost that patient $60 to $75 at an outside pharmacy.
When the Health Center closes for the summer, students will no longer have access to any of these services or be able to refill prescriptions that run out in July or August, leaving them to turn elsewhere for their medicine.
During the summer, there is usually a reduced staff present. These staff members have been asked to take ten month positions instead of their present twelve month positions.
Key administrators and members of ASI were notified of the change in a memorandum from the ASI President to the student body.

LETTERS:
Continued from page 4
"how-to-turn-yourself-on" by focusing on "HEALTHY" ways to seek sexual pleasures. What impression does this leave a 17 year old female freshman, without a boyfriend, and no social life? Is masturbation a HEALTHY AND NATURAL FORM OF SEXUAL EXPRESSION???? According to Dr. Harold Shroock and Dr. Hubert Swartout, authors of You and Your Health: Three Volumes of More Abundant Living (p. 147-149), four negative aspects of masturbation are:
"First, it squanders one's reserves of nervous energy i.e. there will be a lack of concentration used for studying and for sports. Second, the effect of masturbation will damage a person's self-esteem. (Masturbation) robs the person of the ability to "square one's shoulders," and face life with little apology or embarrassment. Third, masturbation may result into a dominant habit which controls one's conduct...like any other addiction (Alcohol and Drugs); it takes away the ability for a person to (complete) goals and objectives. Finally, the habit of masturbation rests on a selfish motive — the desire to obtain personal pleasure of the moment."
I am sure that Tiffany Wright, a graduate student in Psychology, has more sense, intelligence, and tact to write a polished article that is informative, not opinionated. I believe sex is a sacred, natural form of expression between two people who love one another, and are mature enough to handle relationships. This maturity must occur over a period of time, not out of desperation. Masturbation is a destructive sexual-lesmological alternative for people to practice, and I think the facts I have presented throughout this letter proves my point.
Sincerely,
Sherry Palana

It can't do laundry or find you a date, but it can help you find more time for both.

The new Apple Macintosh Classic II computer makes it easier for you to juggle classes, activities, projects, and term papers—and still find time for what makes college life real life.

It's a complete and affordable Macintosh Classic system that's ready to help you get your work finished fast. It's a snap to set up and use. It has a powerful 68030 microprocessor, which means you can run even the most sophisticated applications with ease. And its internal Apple SuperDrive disk drive reads from and writes to Macintosh and MS-DOS formatted disks—allowing you to exchange information easily with almost any other kind of computer.

In addition to its built-in capabilities, the Macintosh Classic II can be equipped with up to 10 megabytes of RAM, so you'll be able to run several applications at once and work with large amounts of data.

If you already own a Macintosh Classic, and want the speed and flexibility of a Macintosh Classic II, ask us about an upgrade—it can be installed in just minutes and it's affordable.

To put more time on your side, consider putting a Macintosh Classic II on your desk. See us for a demonstration today, and while you're in, be sure to ask us for details about the Apple Computer Loan. It'll be time well spent.

Softball squad has big heart, small roster

by Danielle De Vaux
Chronicle staff writer

The 1992 Cal State, San Bernardino women's softball team is learning to adjust in their first year of NCAA Division II competition (California Collegiate Athletic Association). In addition, the Lady Coyotes are faced with a shortage of players.

Third year Head Coach Sue Strain (46-36) says despite having a small squad, we will still be competitive in the CCAA conference.

"Division II involves a lot more power hitting, more discipline, and more strike outs," says Strain. "Everyone is working together.

Leading the young squad that is 7-7 so far this year are senior captain Monica Reyes (1st base), who has a .405 batting average and a flawless .1000 fielding average, junior captain Felicia Harral (3rd base) who has a .400 batting average and an impressive .945 fielding average, and senior pitcher Tana Cash, who has a 1.27 ERA pitching 82.2 innings so far this season alone.

Among the rest of the returnees are senior 2nd baseman Sherri Williams, sophomore centerfielder Michelle Mapstead, and sophomore right fielder Jodi Nicholas. Assisting Coach Strain is Ann Cordaro.

Oddly enough, the team is returning only six players from last year's squad. Strain says she prefers to carry a smaller team of 15 players, but due to complications, some players weren't eligible for competition play.

"We have a good team," says Strain. "Everyone is working together.

Last week the Coyotes overtook California Baptists College in a come-from-behind victory 8-7 on a seventh inning home run made third baseman Jason Lyman on Wednesday. However, on Thursday they blew a 5-3 lead to the seventeenth ranked Division II CSU Dominguez Hills losing at home 7-5. Then on Friday, the Coyotes journeyed to CSU Dominguez Hills and lost 7-4.

Saturday's game, was suspended due to the rain as both teams had six runs after eight innings. That game is supposed to be completed in San Bernardino on April 24.

Golf

No matches are scheduled for this week, yet last week the Coyotes had a most impressive day competing in the Southern California Intercollegiate Tournament at Torrey Pines (South) Country Club in San Diego. Finishing in fourth place, the Coyotes were the highest place Division II team. Only Pepperdine, Cal State San Diego, and Cal State Long Beach, three Division I teams, finished ahead of the Coyotes. Sophomore Rich Zapata, lead CSUSB with a two-round score of 156 (77-78). First season coach Bob Smith said, "A lot of the guys were disappointed with their scores, but when the course plays that difficult and that long we can't get too down on ourselves. I think it was important that we make a good overall showing, which we did."

Tracy Olson
March Madness begins

Finals, Finals, Finals

Just Sink 'Em and Carver High will meet Monday, March 16 at 8 p.m. to settle "bragging rights" for the Intramural A Hoops competition. Just Sink 'Em defeated Jingle Phi 85-75, and Carver High defeated Tony's Team by a technical victory. Vegas odds are on Just Sink 'Em, but we say the smart money is with Carver High!

Untouchables disqualified
Shiite Muslims, SX, in B Finals

Sigma Chi ousted Zodiac and the Shiite Muslims recorded a technical victory over the Untouchables in semi-final competition, to set up the Intramural B Hoops final. Sigma Chi and the Muslims will meet Friday, March 13 at 4 p.m. Look for the Muslims to take care of business.

Pin 'em to begin 'em

The Coyote Cage "Pin 'Em" Classic wrestling tournament will begin Saturday, March 14 at noon. NCAA freestyle, the real thing, will be the style of choice. Sign up now on the Intramural Board in the PE building. "Grapple on, Wayne" "Grapple on, Garth"

Reebok decathlon

The First Annual Reebok Campus Challenge Decathlon crowned its "numero uno" champions, Tony Rossi and Anne Cordaro, last week. Tony withstood a furious challenge from Jay Hannah, with Craig Huston, Pete Galin, Dennis Wolbert, Beotis Jemigan and Ron Bettiga hot on their heels. The women's winner, Cordaro, "held" off Laura Held by a mere two (count 'em 2) points. All contestants competed in a five mile bike ride, rope climb, disc toss, vertical and horizontal jumps, 60 yard dash, foot- ball punt, softball throw, volleyball serve-off, basketball shoot-off and a mile run.

C-ya BUDDies!
Coyotes upset UCR, finish strong

by John Andrews
Chronicle sports editor

On Saturday, Feb. 29 the CSUSB men's basketball team gave the school its first taste of heart-stopping Division II basketball.

The 1991-92 season had its share of controversy and adversity entering a new level of competition but in Saturday's season finale against UC Riverside, the Coyotes went out with a bang stunning the nationally ranked (6) Highlanders 86-83 before a 1000 plus crowd and 100 more that waited outside the CSUSB gym.

"It's to their credit," says coach Reggie Morris. "The guys executed our game plan very effectively."

The Coyotes had been faced with the proposition of having to bear UCR and hope for losses by Cal Poly Pomona and Cal Poly San Luis Obispo to qualify for the post-season tournament.

"We had chances to be in better position all season long," says Morris. "This game was more about the rivalry with UCR," he says.

After holding up their end of the bargain, the Coyotes were defeated upon learning that both Poly schools had won dashing their playoff hopes.

Morris had said at the outset of the season that his keyword for the game was intensity and his Coyotes showed an abundance of it jumping out to a 20 point lead midway through the first half. Their press baffled the Highlanders forcing 25 turnovers and their half-court offensive set weaved inside and out setting up high percentage open shots.

Morris says the full-court press has been a rarity in the CCAA and UCR was probably not as adept at cracking it as other defensive schemes.

"They haven't seen it from most of their conference rivals," says Morris, "but it will be our trademark."

The game was marred by "quick whistle" officiating that gave UCR a chance to get back in the game. Forwards Steve Hickey and Orlando Robinson fouled out of the game midway through the second half forcing Morris to put up to four guards on the floor at once to protect a lead that dwindled to two in the closing minutes.

The Coyotes quick zone defense miraculously stymied the Highlanders three-point bombers in the final minutes and when forward Jim Falvey stepped in front of an errant UCR pass and converted a free throw, the Coyotes had secured a winning record (14-13) in their first season of Division II basketball and given the rest of the conference something to think about in the off-season.

Center DeShang Weaver ended his collegiate career with a 25 point, 10 rebound performance, forward Steve Hickey wound up his Coyote days with 10 points and 10 rebounds, making him the #2 rebounder in school history. Both players were named All-Conference Honorable Mention.

And then there was Develle Walker. The junior guard led all scorers in the game with 26 points, led the CCAA in scoring for the year at 22.9 points per game, was named player of the week for the third time, first team All-Conference and, to top it all off, CCAA Most Valuable Player for the season. And he'll be back next year.

Morris says Walker and the other returning Coyotes have gone a long way towards bringing enthusiasm to the basketball program in just one year.

"We're building a solid foundation from the bottom up," says Morris. "What we've accomplished this season is nothing to be ashamed of."

Governor approves new gym

Approval of Governor Pete Wilson's budget in June could mean a new 5,000 seat athletic facility for Cal State, San Bernardino says Director of Physical Planning and Development William Shum.

"Governor Wilson approved the grant earlier this year," says Shum. "We should know by June at the latest."

The building would cover a sprawling 135,000 square feet to the northeast of the existing gym and serve not only the physical education and athletic departments but the nursing and ROTC programs as well.

Shum says the new facility would also feature faculty offices for members of the aforementioned departments and a complete track and field area.

The proposed construction of this facility coincides perfectly with CSUSB Athletics jump to Division II competition this year but Shum says although it will expose campus athletics to a greater number of people, that is not the reason the Governor approved the grant.

"The construction of this facility was justified to the state on the basis of the growth in enrollment over the past few years," he says. "It didn't have much to do with the Athletic Department."

A 5,000 seat gymnasium would no doubt enhance a CSUSB basketball program that was drawing crowds large enough to turn some late-arriving spectators away by season's end.

"I think a new facility would add a lot of enthusiasm," says men's coach Reggie Morris. "Students would come early and get more into the pre-game hype," he says.

If the grant is approved, Shum says the next step would be a three month bidding period lasting through the summer. Construction would then begin in September and be completed in the fall of 1994.
