ASI Election Invalid, Investigation Looms

By D'Lorah DeBarge  
News Editor  

ASI elections were declared invalid last week by Ycenia and Dr. Patsy Openheim. Even though a run-off was announced early in the week, rumors were rampant voter fraud had occurred.  

"Now we're investigating," said Patsy Openheim, "When we are sure who it is, we will call them in. The election was compromised because we found that almost 200 call-in votes came from two phones in a closed office. That's enough to invalidate the election," she said.  

Candidate Mary Ellen Abilez said, "the students need to take an interest in the election." Students need to know that these are paid positions she said, "it's a $7,000.00 per year job." Abilez said they will probably have to go to paper ballot or use a service.  

Candidate Dick Phillips said he believed that certain students wanted to control the ASI money and would go to any lengths to get control of the government.  

T.J. Wood, current ASI President said "I am taking a risk telling the truth because once before I told the truth and I got crucified for it."  

Speculation by some students noted that numerous students called ASI to complain that Tracks was rejecting their ballot saying they had already voted. A source close to the election

Scholar Finds Unlikely Fame As Language Detective

By Amanda Beeler  
Chicago Tribune  

Uncommon word usage, unusual punctuation and repeated misspellings might be the sign of a bad writer to some, but in Donald Foster's eyes they are dead giveaways that help solve linguistic puzzles.  

A Shakespearean and Renaissance literature professor at Vassar College, Foster has gained unlikely fame as the man who fingered Newsweek columnist Joe Klein as the author of the novel "Primary Colors" and helped bolster the FBI's conclusion that Theodore Kaczynski wrote certain incriminating documents, including the published manifesto, in the Unabomber case.  

His role as a sought-after expert in attributing authorship to anonymous works grew out of his scholarly pursuits. He gained worldwide attention in 1995 for having ascribed to Shakespeare an anonymously written 17th Century poem that eulogized a murdered man.  

The 48-year-old professor, who says he never intended to become a specialist in textual attribution, described the exploits that have carried him far from the classroom in a lecture Saturday night at the Chicago Vassar Club's 1999 Scholarship Benefit at the Arts Club.  

No two people have the same vocabulary or writing style, Foster said, describing individuals as prisoners of their own language. "As a result, when given an anonymous document, and comprehensive text samples with which to compare it, I can usually locate the nameless author— not because I'm so clever but because a writer's use of language is as distinctive, as inimitable, as unique, as one's DNA," he said.

Common(s) Problems

By Mindy C. Stevenson and D'Lorah DeBarge  
Chronicle Staff Writers/ News Editor  

Two hundred out of 470 Serrano Village students signed a petition last weekend to make it a choice of whether to eat at the Commons or not.  

Student Khanh Doung started all this when he discovered that Serrano Village students may be overpaying for their meals. He discovered this when he noticed that food service charges on his quarterly receipt did not correspond with the point system used by housing to calculate how much residents are paying for their meals.  

First, Duong questioned other students to find out whether they too had noticed this discrepancy. Students were always told that they were getting discounts on their meals, but no one quite understood the system. Then he asked a Commons cashier what each point was worth. She explained that each point was worth $.01.  

Then he went to Tito Calderon, and he described the relationship between points and cash differently. Calderon told Duong that a student's quarterly $640 food fee translates into 148 points.

Business women learn to contract
with the Federal Government

The U.S. Small Business Administra-
tion (SBA) is organizing a special
seminar along with the State of
California, The Inland Empire Small
Business Development Center for
women who want to start their
own business or who already are
in business and want to learn how
to contract with the Federal Gov-
ernment and win by taking ad-
vantage of the opportunities the
Federal Government is listing
through the internet.

“The Federal Government is
bidding opportunities for contrac-
tors or service products in non-
specific areas,” said public infor-
mation officer Stacy Sanchez.
They want to move away from
traditional ways of commerce
and encourage a new trend of
commerce “on line” using the
internet, e-mail and fax systems.

The seminar will teach about
available programs like HUBZone
and Pro-Net. HUBZone (Historical
Under Utilized Business) provides
opportunities for small businesses
to grow which in the long term
helps to empower communities,
create jobs and attract private in-
vestment. PRO-Net is an elec-
tronic program to help business
owners to gather information for
and about small businesses and
connect them to procurement op-
tunities.

Contracts apply to any product
or service such as supplies, air-
planes, auto, parts, etc...

Public Agencies or the Federal
Government usually require pay-
ment bonds to assure the job will
be completed. For that purpose,
the Small Business Administra-
tion will give security bond as-
sistance. They guaranty up to
1.25 million dollar payments to
security companies in cases
where the bond cannot be ob-
tained through conventional
channels.

The seminar will take place
April 29,1999 at the Inland Em-
pire Small Business Develop-
ment Center, 1157 Spruce St.,
Riverside. The workshop’s cost
is $15.00 if pre-paid or $ 20.00
the day of the event. For addi-
tional information and registra-
tion call (909) 781-2345.

The key question is: what’s
a point really worth? If the cash-
ier said a point is a penny, and
Calderon says the CSUSB Foun-
dation takes 23.33% of the $640
board fee for each student’s quar-
terly meal card, the figures don’t
add up. If you take 23.33% of
$640, you get $149.31.

Duong began the question
where the rest of the money,
$491.61, went. So then, he cir-
culated a flyer to the 470 dorm
students asking them the same
question.

To get some answers, he be-
gan contacting administrators.
He spoke briefly to Food Ser-
dices Director David Jones, as
well as Calderon and Student
Services Vice President Patsy
Oppenheim, and became con-
vinced that they were not ac-
counting for all of the board fee.

Duong then contacted
Maury Huerta, the Building
Maintenance supervisor for
Housing and Residential life, to
confirm this information.” He
said I was in way over my head.
Duong said, “but he did say that
no money from the student fees
came to maintenance.”

Huerta later denied this re-
response, “I did not tell Duong
that he was in way over his head...not
exactly,” but he did say, “none
of the board fees are for pay
maintenance.”

Oppenheim advised Duong
to wait until Housing Director
Tim Trevan returned from a con-
fereence in Hawaii to discuss the
students’ concerns.

While he waited for answers
over last weekend, Duong circu-
lated a second flyer to the resi-
dents, explaining the new but
still confusing information.

On Monday, Duong met
with Jones, Trevan and
Housing’s administrative analy-
sis, Kathleen Marcelino, but his
questions remain.

Jones said the ratio the
Foundation used was “an inter-
al thing” and insisted that
Duong was the one who didn’t
understand the formula.

Foster
cont. from cover

Foster says his expertise as a detective began when he was a graduate student in the 1980s and was able to identify the authors of anonymous critiques of his Ph.D. dissertation, which centered on the elegy.

A product of the northwest suburbs of Chicago, Foster now receives 40 to 50 requests a week for assistance in identifying suspects or authors and has consulted on such high profile cases as the JonBenet Ramsey murder in Boulder, Colo., and bombings at the Atlanta Olympics and a Birmingham abortion clinic that authorities believe are linked.

Though he is frequently referred to as an expert in computers and handwriting, Foster is quick to point out he is neither.

There is no magic in my attribution work and no computer wizardry,” Foster a balding, bespectacled man who frequently refers to himself as an absent-minded professor, told the crowd of almost 200 Saturday.

The computer, which he uses frequently for word searches, allows him to dowhat the human brain cannot: read up to 1 billion words in the time it takes an individual to read a sentence.

And while he might look at the handwriting in a document, Foster is interested in the words themselves: how sentences are put together and what words and phrases a writer uses.

“When I finished (“Primary Colors”), I didn’t know what happened in it, but I knew the language,” he said.

Foster researched the Bill Clinton roman a clef at the behest of New York Magazine. He says he started by jotting down unusual words in “Primary Colors” and then searching via computer for similarities in blocks of text from the books, don’t believe the writing is Shakespeare’s.

“There is a massive dispute over whether the elegy is really by Shakespeare and the majority of Shakespeareans feel it probably is prose.”

In Kaczynski’s case, Foster was able to identify source material from specific out-of-print books and issues of Scientific American that he subsequently learned had been found in Kaczynski’s cabin.

Later this month, Foster will travel to FBI offices in Quantico, Va., to teach bureau agents how he does his work. In September he will travel to Ontario to consult with the Ontario Provincial Police, who are establishing a computer database of language and words commonly found in threatening documents. The database is similar in concept to SHAXICON, a computer database Foster is developing containing words and phrases from Elizabetian and Jacobean literature. The database not only helps determine attribution, but can be used to trace source material and identify collaborative works.

Completing SHAXICON as well as a collection of early women writers’ projects Foster hopes to tackle in the future instead of paging through police documents and anonymous notes.

“This is not something I want to be doing for the rest of my life,” he said his police work.

While Foster is happy that he is no longer known simply as “that Primary Colors guy,” being in the spotlight has forced him to develop a thick skin.

A recent CBS “48 Hours” broadcast on the JonBenet Ramsey case implied that Foster had identified the wrong killer after reading passages on an Internet chat site that he thought might have been written by JonBenet’s brother. The postings had been made by a woman with no connection to the case.

Foster cannot comment on the investigation, but said he stands by his statements he has made for the record in the case.

“Don’t believe everything you read in the paper,” Foster warned the Arts Club audience.

HIGH MARKS FROM MORNINGSTAR, S&P, MOODY’S, MONEY MAGAZINE AND BILL.

We take a lot of pride in gaining high marks from the major rating services. But the fact is, we’re equally proud of the ratings we get every day from our participants. Because at TIAA-CREF, ensuring the financial futures of the education and research community is something that goes beyond stars and numbers.

We became the world’s largest retirement organization by offering people a wide range of sound investments, a commitment to superior service, and operating expenses that are among the lowest in the insurance and mutual fund industries.

With TIAA-CREF, you’ll get the right choices—and the dedication—to help you achieve a lifetime of financial goals. The leading experts agree. So does Bill.

TIAA-CREF can help you build a comfortable, financially secure tomorrow, with tax-deferred annuities, mutual funds, IRAs, insurance and more.

To find out more, call us at 1 800 842-2776.

Why Do We Have To Take Capstone Classes?

By Dan A. Farmer
Executive Editor

For this week The Coyote Chronicle is taking on whether or not CSUSB should require integrative Capstone class for graduation. They sure do take up a lot of time. 12 units to be exact. So why is it that CSUSB requires them?

Without checking with administration or faculty, I'll take a stab at the question from a purely student point of view. Let's start with the vision statement for our school. "California State University, San Bernardino will become one of the leading comprehensive universities in the nation, distinctive for its contributions to the understanding of learning and for the creation and study of innovative partnerships to promote educational, social, economic, and cultural advancement in the region.

We have the privilege of participating in one of the country's most diverse curriculums in the nation, and on a larger scheme, the world. CSUSB has a duty to embrace this uniqueness and address the fact that with multiple cultures comes multiple ways of understanding and learning.

Capstone classes are CSUSB's answer for reaching out and building a bridge to unite all of these cultures and create an environment of understanding in which we all can learn and adapt to our multifaceted center of scholastic enrichment. Classes such as Perspectives on Gender, Ideas in American Culture, and Roots of Modern Racism in America provide avenues of understanding and acceptance of our diversity and place us on a pedestal for the rest of the educational community to learn and take example of.

In a selfish light, Capstone classes give us an edge in the real world. We have the advantage of being prepared for an evolving workplace where more and more the standard is knowing how to work side by side with people from many different backgrounds and many different beliefs.

Our path for success is paved by these Capstone classes. We are an elite group of scholars that will be able to enter a new era in the American work force that actively seeks people who can function and excel in a diverse environment. We are the leaders of a new business mentality that needs to be able to adapt to new and enriching surroundings. Embrace and enjoy this opportunity presented to us in the form of Capstone classes. It can be your biggest edge in entering the "real world."

By Danielle Stewart
Layout Editor

Higher education is a wonderful concept. I love learning, discovering, and using acquired knowledge. Education systems have worked well by providing individuals with opportunities to expand their knowledge and use it in a specialized job setting. One aspect of the curriculum I do not agree with is the upper division Capstons required in humanities, natural, and social sciences.

"Everything I ever wanted to know I learned in kindergarten." That is the title of the book. Seriously though, the Capstones are repetitive courses of the lower division, general education requirements. During the last two years, students should plainly focus on the major. After all, that is the reason they are there in the first place.

The Capstones impose three problems on the students: they take focus away from the major field of study, the level of work involved is left to the teacher's discretion, and the information mimics concepts learned in previous classes. If you think about it, the first two years of the higher education process are just a reinforcement of the things relearned in high school.

Capstones are four unit upper division classes requiring constant studying. Since they are so time consuming, they divert attention away from the student's major. Extensive reading is involved in understanding key concepts, which are usually buried underneath a bunch of jargon. It seems that these classes are unnecessary for a well-rounded education and without them, students can continue...
The $700 Blue Plate Special: Greek Housing?

By Dick Phillips
Chronicle Staff Writer

Have you ever wondered where your ASI fees go? On April 13th, I attended the ASI Finance Board Meeting. I discovered that the board was going to vote to spend $700 on food for an information night dinner regarding how to change the city ordinance prohibiting off-campus Greek housing.

The event, which is being promoted by ASI Vice President, Mary Ellen Abilez, will attempt to bring together 5th ward city Councilman Jerry Devlin, various ASI representatives and selected representatives of the fraternities and sororities at CSUSB. As discussion of the agenda item started, I had the feeling that the board was grossly ignorant of the facts concerning off-campus Greek housing. It seemed to me that the board was more concerned with throwing a bone to Greeks in the form of a worthless dinner, rather than looking at the facts.

As of right now, the City of San Bernardino has an ordinance that bans fraternity/sorority houses. The only way to get around the ordinance entails a host of environmental studies, neighborhood approval and a formal OK by the city council. With this in mind, I think it is highly improbable that Councilman Devlin could convince his fellow councilpersons to throw out the ordinance. But, if the city council threw out the ordinance, there still wouldn't be Greek housing. Why? To put it simply—money.

The current state of the Greek system at CSUSB could not support a "Greek row." The Finance Board, in their wisdom, failed to notice that it takes hundreds of thousands of dollars to build Greek housing. Since the Greek system at CSUSB is around twelve years old, most if not all the fraternity/sorority's national organizations will refuse to fund Greek housing because our Greeks are not economically viable. This means that CSUSB Greeks have a hard enough time paying their dues and tuition without having to worry about having their dues tripled or being forced to live in the fraternity/sorority house to maintain occupancy.

Don't get me wrong. I'm all for Greek housing. I've lived in my fraternity's unofficial fraternity house for 2 years. My problem stems from the carefree spending of ASI fee money that you and I are forced to "contribute." After debating the issue with the board, they ultimately voted to spend the $700 on the dinner. When will ASI learn that it doesn't take $700 to figure out a way to change the Greek housing ordinance? Why can't they pick up a phone and call fraternity/sorority presidents about the ordinance? Is this $700 dinner really necessary? You be the judge.
Spotlight on Kevin Grisham

By Karen Wesche
Chronicle Staff Writer

Kevin Grisham has not always studied world politics and international diplomacy, but his considerable knowledge in these areas helped the CSUSB Model United Nations (MUN) team earn the "Outstanding Delegation" award at the National Model United Nations Competition in New York.

The weeklong event, held March 29 through April 4, takes place annually at the United Nations in New York. The competition hosted 2,700 students from 183 universities around the world. CSUSB represented Saudi Arabia and took home the highest honor. The contending universities included Georgetown, BYU, University of Wisconsin at Osh Kosh, University of Tokyo, Heidelberg University in Germany and other impressive competitors.

After the 1998 competition, Grisham was elected Secretary General for the Model United Nations. The duties of this office involved yearlong preparations for the 1999 event, and coordinating and facilitating the flow of proceedings at the actual competition.

Most of the 20 MUN team members are also on the Model League of Arab States team, which is just as successful. At the Southern California tournament, hosted by UCLA on March 28, CSUSB took home its eighth consecutive victory.

The success of these teams is the result of many factors. They have excellent leadership in Dr. Ralph Saimi, who trains the teams, and the members display extraordinary commitment. Throughout the year, they are researching from four to six hours a day. They study the political position of several countries on a variety of topics and stay current on international events. Grisham said that he considers himself privileged to be surrounded by so many intelligent people.

The spirit of the team, according to Grisham, may be another key element of success. "It’s all about teamwork,” he commented. “Because of the extensive process, you tend to bond. I feel a real sense of family. The relationships we’ve formed mean much more to us than even the winning of the award.”

This attitude has relevance and value in international diplomacy. Grisham stated that diplomacy should not include an "I win or you win" mentality.

"As Americans, we have a competitive spirit, but diplomacy is more than I win or you win. When we both walk away from the table with something, we’ve both won,” he said.

As enlightened as Grisham is today, his early college years were not spent studying these disciplines. After moving to Victorville from Louisiana, he attended Victor Valley College and received two associate degrees. He was a pre-med student aspiring to be a psychiatrist. However, when he transferred to CSUSB he changed his major and received his Bachelor’s in criminal justice.

It was as a graduate student, that Grisham became involved in the MUN and Model League of Arab States. He became fascinated with the study of the Middle East after taking a political science elective in his senior year and decided to pursue a Master’s in Interdisciplinary Studies, encompassing National Security, Criminal Justice and Political Science.

Grisham will attend UCR in the fall to work on his doctorate in political science. He plans to be a full-time professor, write books, and travel the Middle East, to do in-depth research in the region. Later in life, he would like to obtain a law degree and possibly work for the United Nations investigating human rights violations.

What does the term Hispanic mean? What does the term Latino mean? What purpose do either of them have? Oddly enough, there are many people who are divided over these two words. And there are some that really rather not use either term. The term Latino, as it is most often used by people of Latin American descent, has become a loosely identifying term for anyone who is descended from any of the Latin American nations: ranging from the Southwest United States to Mexico, the Caribbean, Central America, and the farthest reaches of the South American continent.

The word Latino, on its own, is actually based on the language of a person. Any people who have a Latin-based language as the dominant language within their culture are Latinos. For example, Rumanians are Latinos. In French, the term is translated Latin, but nonetheless refers to French being a Latin-based language. Spaniards, Italians, even Filipinos are considered Latinos (in the Philippines, Spanish is still somewhat dominant language, although fading rapidly). So, in review, a people that speak a Latin-based, or Romance language, are considered Latinos globally.

Hispanic. Hispanic has become almost a slur for some and yet, a simple misnomer for others. The term Hispanic was instituted by the United States Federal Government in an effort to more easily categorize people of Latin American origin. Rather than listing each nationality on government and private business forms, it was found simpler to initiate an all-inclusive term for population censuses taking, ethnicity statistic studies, school entrance applications (of all ages), etc.

Since the majority of these nations have Spanish as their national tongue, Hispanic seemed to fit the task well. But, there was and is a bit of a snag with the term, which has bothered and even enraged quite a few people of Mestizo heritage. (Remember Mestizo meaning mixed heritage of Iberian and Native American culture/blood; also used to identify general European and American Indian mixtures.)

Hispanic infers of Spanish origin. Again, this term is based on language, yet it implies more. People that take pride in their Native American Heritage resent the idea of being labeled originating from the Spain. The very people that caused so much devastation in the Western Hemisphere, some 500 years ago. The argument is legitimate: The idea is that the term Hispanic denies Native heritage, nullifies it in not so many words, if you will.

Both terms are based on language, not so much on cultural origin. That in no way legitimates it. But among many people of Hispanic/Latino origin, there has been an invisible line drawn. Some that utilize the term Hispanic, view those that use Latino as militant or radical, undeserving of legitimate grievance.
Private Franchising

■ An Opportunity to Succeed

By Victoria A. Seitz, Ph.D.
Special to the Chronicle

For some of you when you graduate you'll want to go with a large company and work there. Others may want to go into business for themselves.

So, you work for a company and you help them to achieve a $2,700 profit. Where do you think that most of the profit goes? To the company. Yes, you'll probably get a bonus but not any where near the amount that the company gets, or for that matter, the bonus that the CEO gets.

For those that want to be independent business owners you have several options today that include buying a franchise or opening the doors to your own business.

With your own business you start from scratch building awareness, finding suppliers, training employees and so forth. When the company makes a profit, whenever that is, you get the majority of it, if the company survives.

Small businesses may employ the majority of Americans but they also have the highest attrition rate of all company structures. In this day and time, if you're in business for five years that's a plus; however, it doesn't guarantee your future survival.

Another option is buying a franchise such as McDonalds at $1 million dollars, free and clear, or Baskin Robbins at $64,000.

Owning a franchise has a lot of benefits that include the instant awareness of your company as well as the training and supply functions that accompany the franchise agreement. Further, if you make the company a $2,700 profit you get the majority of it where the company gets a small portion.

I don't know about the rest of you, but I don't have $1 million dollars to invest in a McDonalds or $64,000 for a Baskin Robbins.

Other direct sales companies include Mary Kay, Avon, Nikken, CiTC, Herbal Life and Pampers. Another company that you're also probably familiar with is Amway, which started out in the soap business, now distributes products and services for MCI, Kelloggs, Sony, and many more national brands through independent owners. Incorporating the Internet, Amway will be opening their mall Quixtar September 1, 1999.

In private franchising you are the contracting corporation rather than the warehouse club or the online service that provides products to consumers.

All in all, private franchising is a better marketing strategy that combines the successful marketing trends that are currently being used and the latest technology to satisfy consumers needs and wants with you making the majority of the profit. Rather than paying wholesalers, jobbers, retailers, that 65% of the revenue generated is absorbed in paying for this overhead.

Manufacturers have tried to find more efficient and profitable means to get products to consumers such as selling directly to Warehouse Clubs such as Sam's or now, selling through online services via the Internet.

Stop by Jack Brown Hall and discuss private franchising issues with Dr. Victoria Seitz.

Privatizing shopping for consumers, and

To further understand the growing role of private franchising, let's review traditional distribution channels. Manufacturers have, in the past, used various means to get products to consumers. These included brokers, jobbers, wholesalers, advertising and retailers, and where 65% of the revenue generated was absorbed in paying for this overhead.

Manufacturers have tried to find more efficient and profitable means to get products to consumers such as selling directly to Warehouse Clubs such as Sam's or now, selling through online services via the Internet.

In private franchising you are the contracting corporation rather than the warehouse club or the online service that provides products to consumers.

All in all, private franchising combines the successful marketing trends that are currently being used and the latest technology to satisfy consumers needs and wants with you making the majority of the profit. Rather than paying wholesalers, jobbers, retailers, that 65% goes into your pocket.

Privatizing franchising gives you the opportunity to distribute national brands of products and services without the huge expense of buying a traditional franchise. Further, if you get others involved in distributing these products and services to consumers, you make a percentage of what they make.

Some of you will say this sounds like direct sales, yes it does, but this is the way many national companies are going. For example, American Express Financial Services, Excel telecommunications and Softview Computer products are just some of the companies that have chosen to let people be their own boss while expanding the service area of the company without the expense.

Other direct sales companies include Mary Kay, Avon, Nikken, CiTC, Herbal Life and Pampers. Another company that you're also probably familiar with is Amway, which started out in the soap business, now distributes products and services for MCI, Kelloggs, Sony, and many more national brands through independent owners. Incorporating the Internet, Amway will be opening their mall Quixtar September 1, 1999.

Want to know how you can get a piece of e-commerce? Like to make an extra $500 or $1,000 a month part time? Or do you want to get your own business started? Check out www.wwdb.com (password — dream, name — distributor) www.countdown1999.com or stop by Jack Brown Hall 423 and we'll talk about being your own boss.

With Earth Day approaching, The Coyote Chronicle began to wonder which people here on campus are actively involved with environmental awareness. We ended up meeting Dr. Darleen Stoner.

Dr. Darleen Stoner seeks to change the lifestyles of our society to combat the degradation of the earth

CSUSB Professor Embraces Earth Day

By Mindy C. Stevenson and Michelle Wheeler
Chronicle Staff Writers

With Earth Day approaching, The Coyote Chronicle began to wonder which people here on campus are actively involved with environmental awareness. We ended up meeting Dr. Darleen Stoner. She is a professor of environmental education here at CSUSB and is also the founding director of the Inland Empire Environmental Committee. Recently we had the opportunity to interview Dr. Stoner and ran into a fascinating woman whose life just happens to revolve around environmental awareness and the betterment of the world we live in.

Chronicle: What exactly does your committee, The Inland Empire Environmental EXPO, do for the campus?
Stoner: The committee provides events to help people find solutions and resources to guide them to solutions for environmental concerns. The committee has been on campus for 13 years now. They provide the environmental EXPO with displays and exhibitors. They work with the Student Union and A.S.I. The committee sends out mailings and a newsletter called NESTnews to all schools in the Inland Empire, and runs an environmental web-page which you can see at soe.csusb.edu/nest/

The committee is also responsible for recycling bins we now have on campus, but their major contribution is the EXPO.

Chronicle: What did you do before you became a professor at Cal-State?
Stoner: Before Cal-State I worked at Elementary and Jr. High schools. My masters is in biology and I care about the environment so I put all my effort there.

Chronicle: What classes can students take on campus concerning the environment, and how can we get more involved?
Stoner: The majority of environmental classes are part of the masters program. There is one undergraduate class called environmental studies that everyone can take. Also students can help A.S.I. in passing out flyers and come to the EXPO.

Chronicle: What kinds of environmental issues can we expect to face in the future and what goals do you have for the future of the environment?
Stoner: The most important thing we can all do is change lifestyle and develop environmental consciousness. Everyone needs to be involved with the job issues and social consciousness we need to take care of. There are great advances taking place in technology right now and we can use them to help the environment too; most important we all must become aware.

Stoner
Just Who Are the 2 Skinnee J's?

By David Cade
Chronicle Staff Writer

Emerging on stage in bright red Divo-esque body suits and gold helmets, the 2.Skinkee J's opened the Everlast and Sugar Ray concert in Coussoulis Arena a few weeks ago.

With music I can only describe as industrial-funk meets hip-hop, the two front men gave an electric sound. Add to the funky, hip hop back beat and you've got a style refreshingly different from the mainstream—your typically over sampled and unoriginal rap groups.

After the concert, I had the good fortune to meet and talk with Andy Action, the band's drummer.

INT: So how long have you been on tour with these guys?
AA: This is the last day of seven weeks with Sugar Ray and Everlast. I'm feeling a little bit emotional right now, so be honest.

INT: How so?
AA: We made really close friends with all of them and they've treated us amazingly well. They've exceeded all manner of courtesy in us that they didn't have to.

INT: Tell me about the tour, how you got picked up for it?
AA: Well, that's sort of an interesting story actually. In October, before Everlasts single blew up, he came out and opened up for us on the east coast for about twenty dates. And that was a really interesting way to meet one of your idols because he's like a legend, and there he is opening for us. It was a little awkward. But in a nutshell, my dad was a friend of mine got axed. A lot of employ­ees, who really have been up to bat for us over many years, got axed. It feels bad.

INT: That's too bad.
AA: Yeah, it blows. It really fkin' blows. But you know what, a lot of big name bands are gonna continue to rock on, so we'll be fine. Long live rock.

INT: Well, hopefully the exposure tonight with MTV being here...
AA: Oh yeah, well, you know, MTV has been really nice to us.

INT: Really?
AA: MTV's the largest radio station on the planet. Don't let 'em fool you otherwise. And basically, it comes down to the program directors looking at themselves in the face and saying 'can I put my kids through school with a trust fund? If I play this video...if the answers are yes, then they pass. 'Can I keep kids watching my channel?' And if the answers are no...pass. That's the bottom line. It has nothing, at all, to do with their preference, their kids preference...what bands are good, what bands are bad. It literally doesn't even enter the picture. It's what the people are listening to.

INT: Go on.
AA: Well, we have one video and it got played six times on 250,000 listeners four years ago. Actually, last fast April. But, in good news...they're re-serving that very same song and re-editing the video. And all these radio stations, all around the country, are starting to add it to regular rotation.

INT: Where you're on the road, do you ever have experiences where you just shake your head and go, 'man that was really weird?'
AA: All the time. About, I would say, three or four times a day. I have an experience where I just reflect on what just occurred and I'm like 'holy shit.' People treat me strangely. And sometimes, no matter how many times they project upon me. Like obviously you don't know somebody when you first meet them. But they imprint upon you something that they either want you to or hope you to, or wish you could be, or that they believe you to be...and then they interact with you on those terms. And that's a very strange way. Because we're not rich, we're not famous; we're not sexy. But people will throw themselves at us and do and behave strangely and offer bizarre things...and I'm never just going in a sexual direction here. Just the big picture, we get treated differently than other people. Sometimes we get treated like shit, but a lot of times we get treated really, really well.

ARTS & ENTERTAINMENT
The Coyote Chronicle
April 22, 1999
The Offspring is a band in transition. After the success of 1994's *Smash* and 1996's *Ixnay on the Hombre*, they are no longer certain what type of music they are in the business to make. As songs like "Pretty Fly (For a White Guy)" and "Get a Job" indicate, the band has been compelled to cater pop ditties to FM radio. At the same time, they still want to thrash like hard core punk rockers, as on the songs "Standing at the Sun" and "Walla Walla." This leaves us with an uneven album that's just as frustrating as it is pleasing. Once the Offspring decide whether they want to be the Beatles or the Sex Pistols, their work will be far more significant.

Canada's music scene has always been like a leaky faucet, and the Barenaked Ladies are yet another delightful drop. With melodies to drool over, *Stunt* is like Pavlov's bell for music fans. From the eccentric and wacky "One Week" ("Chickity China the Chinese Chicken/ Have a drumstick and your brain stops tickin'") to the wicked "Alcohol" ("Would you please ignore that/ you found me on the floor/ trying on your camisole?"), the Barenaked Ladies have made the kind of album that both popular radio and college radio should finally praise together.

If the Judds had been a trio, this is the music they would have made. As a result, it is hard not to like *Wide Open Spaces*. The Chicks' excitement is contagious and they compel you to sing along. Yet, like most recent country albums, the Dixie Chicks choose to play it safe within the confines of country/pop structure as defined by Reba McEntire and Shania Twain. It would be refreshing if these three free spirits bared their souls instead of belting out tired lyrics about independence ("If these are life's lessons, she'll take this test"). Despite the cliches, the Dixie Chicks rise above it all with talent to spare on this breakthrough debut.

*Lost & Found* is a comedy about a guy who would do anything to get the girl of his dreams - and did!
Encounter In 3D

Amber S. Miner
Arts & Entertainment Editor

I haven’t seen a good 3D movie since the days of the paper and plastic glasses that never quite fit right. Until my recent viewing of “Encounter in 3D,” this movie is playing at the IMAX at Edwards Theatres in Ontario. The audience receives wrap-around glasses equipped with personal speakers. Once these high-tech glasses are in place, the 3D experience begins.

This 3D experience teaches as well as entertains. The movie takes the audience on a visual tour through the history of 3D, even showing some of the first 3D movies to have been made. It gives a brief explanation of how 3D technology works. It is new, advanced 3D is so unique compared to the everyday 2D movies we’re used to.

While Elvira gets put on hold, the audience gets to see three of the most amazing 3D short films ever made. These are incredible. I couldn’t believe how realistic the effects were. They bring you right into the screen with them, and before you know it you are sucked into a whole new world.

In the end, Elvira gets to do her show. The entire film is interesting; the 3D effects are very advanced. It made me feel like I was flying. They threw monsters, trains, and other various objects your way. It is worth seeing mostly because this new, advanced 3D is so unique compared to the everyday 2D movies we’re used to.

Art on the Internet

Amber S. Miner
Arts & Entertainment Editor

The Internet is changing the art world. Web pages are becoming works of art in themselves. Galleries are going online. Unknown artists now have a forum in which they can reach an audience that until the advent of the Internet, was unreachable.

The potential audience that is available on the Internet is perhaps the most important factor of the changing art world. Every one is essentially “equal” in that anyone’s website can be “hit” on at any time. Anyone can post a virtual gallery of their own.

But what happens to traditional galleries? Many are wary of going online mainly because of the ease in which images can be downloaded. All it takes is a click of the mouse. This makes art dealers nervous for two reasons.

The first reason art dealers are wary of the Internet is that if work can be easily downloaded, it can then be easily reproduced and re-sold, even without the necessary permission. Second, the Internet as an artist’s forum makes dealers nervous because of how difficult it is to track down and “catch” people who are downloading works illegally.

A common misconception of works posted on the net is that anyone is free to download them. The truth is that once an original piece of work has been posted on the net, it is copyrighted. It doesn’t have to have the copyright symbol in order to be protected. The only pages in which it is legal to download images and text are government pages, or those which have a URL ending in .gov or .mil.

The Internet has the potential to be the first forum in which everyone has an equal chance to have their art seen, read, or heard. One no longer has to find an agent who believes in them in order to find an audience that does.
30 Years of Earth Day

By Gaylord Nelson
Special to the Chronicle

For today's college students, there has always been Earth Day. Growing up, almost all of you participated in school, scout, or community activities that marked this occasion.

But, as recently as 1969, there was nothing called Earth Day. As a U.S. Senator, I was dismayed the Senate and the rest of the political establishment were simply blind to the environmental deterioration all around us. I could count on one hand the number of senators who would have described themselves as "environmentalists," and I was searching for some way to change that.

From my travels around the country, I knew Americans were much more aware of and concerned about the state of the environment than the political establishment. Finally, it occurred to me that if we could organize a huge, national demonstration on behalf of the environment it might force the issue onto the nation's political agenda.

After proposing the idea in a September 1969 speech in Seattle, I sent a letter to every major college newspaper and took other steps to spread the word—and wondered if it would catch on.

The public response was overwhelming. On the first Earth Day, which was April 22, 1970, some 20 million Americans took part in a wide range of activities. Just as remarkable was the fact that I did not organize all this; students and teachers and other citizens simply felt strongly enough about the planet's condition that they rushed to support the cause.

American Heritage Magazine called Earth Day "one of the most remarkable happening in the history of democracy." I never dreamed that 29 years later Earth Day would still be going strong.

Will the new millennium be good—or bad—for our planet's health? The answer depends in large part on the generation now on our college campuses. I believe most young people understand the importance of environmental protection and what we need to do to be responsible environmental citizens. The key question, then, is: Will your generation act on this knowledge and commitment? If you do, you will be remembered as the generation that made the critical difference.

The key challenge for you is to forge and maintain a sustainable society—one that meets its own needs without depriving future generations of the chance to meet their needs. No country has managed to achieve that goal. We are all consuming our capital and counting it on the income side of the ledger. That is not sustainable. What is our capital? It's our resource base: air, water, soils, forests, rivers, oceans, minerals, scenic beauty, and biodiversity. Take that base away, and all that is left is a wasteland.

We have only one planet. Nothing could be more important that making sure it is a livable planet. Through community work, political activity, and lifestyle decisions, you have the power to save Earth.

Editor's note: Earth Day founder Gaylord Nelson, a former U.S. Senator, is Counselor of the Wilderness Society.

The Watershed Project

Cal State Professor Receives Prestigious Grant

by Danielle Stewart
Design Editor

A Cal State University, San Bernardino professor is the recipient of the competitive $10,000 NEA Grant, the National Endowment for the Arts grant.

Sunt Khalsa, photographer and CSUCB art professor, receives the grant with Chico photographer Geoff Fricker. They plan to use the grant to explore California's waterways and use their research in a touring art exhibition involving visual art, spoken word performance, and a public lecture series.

Photography, art, water, and the environment. What do these things have to do with one another? Well, they are the foundation for Khalsa and Fricker's exhibit, called Watershed. It will be comprised of photographic and sculptural works studying human interaction with lakes, streams, and rivers. They plan to create an interactive art engagement and a series of public lectures that will tour sites in California and Nevada. It will begin in September at Cal State, Chico, then move on to Humboldt State University at Nevada, Reno. A public lecture series will also tour sites.

"Through community work, political activity, and lifestyle decisions, you have the power to save Earth."
Ecocriticism: A New Approach to Studying Literature and Environment

By David Cade
Chronicle Staff Writer

"Much of literature is designed to bring about social change. But it's not often that literary criticism and scholarship has been intended to help bring about social change," said Daniel Patterson, professor of English at CSUSB.

ASLE, the Association for the Study of Literature and Environment, is a world-wide academic society pioneering ecocriticism which looks into the relationship between human culture and nature. Members bring together their interest in environment, environmentalism and natural history and join them with the study of literature.

This growing movement of scholars has legitimized ecocriticism and made it possible to study nature writing texts in university courses as literature.

"A lot of the fun scholars have been having with this movement," Patterson said, "is the fact that we can go back and recover texts that haven't been read in a long, long time. Because they were nature writing (texts) and nobody in academia knew what to do with them, there was no place for it (in universities)."

Even publishers didn't recognize it as a distinct genre of literature. Patterson mentioned a writer by the name of Sarah Orne Jewett. Apparently, when she sent a story to a New York publisher, they rejected it because it had trees and birds in it.

That was in the 1890's, but Patterson said, "that kind of prejudice still exists...people for the most part are not interested in nature. Today we like TV. We like immediate gratification. We like cars and action adventure films." This pop culture mentality doesn't discourage Patterson though. If anything, it reaffirms the urgency and importance of the work ASLE is doing.

Two-thousand members strong and growing, ASLE's ecocritical movement is rapidly building momentum. Now there are courses being taught all over the world in nature writing. Because the movement is interdisciplinary at its core, you might have a teacher in a biology or philosophy department, not just English, teaching a course in the nature writing of that region.

The end result is a curriculum in the nature writing that helps people study all the written representations of that particular place. "It helps give people a sense of their place as a particular place," said Patterson, "which is a fundamental governing principle of ecocriticism. It is a social goal. Because if you get to know your place, you're much less likely to treat it with disrespect or to trash it."

New Major

○ Environmental Concentration to begin in Fall
By Karen Wesche
Chronicle Staff Writer

The management department has added an environmental concentration that will begin this fall. The program was inspired and developed by Dr. Elisabeth Ryland, along with many of her colleagues.

This is the first time that an environmental management program has been offered to undergraduates. If all goes well, a minor program will be added by Fall, 2000.

According to Dr. Ryland, career opportunities in this field are growing. "Environmental literacy is vital to the 21st century," she said. Companies are pressured by law and the public to use resources efficiently and rely less on non-renewable fuel sources. The concentration will emphasize these and other points.

Research Project

○ Relationship of hopeless people & environment
By Karen Wesche
Chronicle Staff Writer

CSUSB has provided a mini-grant to fund Dr. Ryland's current research project. She is exploring the relationship between a sense of hopelessness in people about the environment, and their unwillingness to act on environmental issues.

She feels that apathy may stem from the notion that an individual cannot make a significant impact. Ryland came to the United States from Europe on a Fulbright Scholarship. She attended the University of North Carolina, Chapel Hill, where she received her doctorate in organizational behavior. She has been teaching at CSUSB since 1986.

For more information, contact Professor Elisabeth Ryland, Department of Management, at (909) 880-5748 or Eryland@csusb.edu.

Come Celebrate Earth Day at CSUSB!
Good Genes Make Good Teachers

Joan Fryxell & Geology

By Jill Dahlman
Chronicle Staff Writer

If intelligence runs in the family, the Fryxell family has proven that genetics play a huge role. With a mother who is an oceanographer, a father who is a botanist, one brother a chemist and another a geneticist, CSUSB's Dr. Joan Fryxell in the College of Natural Sciences had no choice but to excel. And she did that very well. Fryxell received her B.A. in Geology from Earlham College in Richmond, Indiana, her Masters in Botany at the University of Texas at Austin and her Ph.D. in Geology from Harvard University's department of Earth and Planetary Sciences in Structural Geology and Introductory Geology. While at Harvard, she studied and team-taught with Brian Wernicke, one of the foremost geologists in the country.

Fryxell's Geology 101 course, a general education course, is a lesson not only in geology, but also in one person's genuine love and affection for their subject matter. This attitude is contagious to students. As a student, we expect our instructors to be "top of the line," knowledgeable in their field, and impart their knowledge to us in a clear, concise way.

Occasionally, we find an instructor who is willing to poke fun at themselves, make a class interesting and to take a subject we are intimidated by and make it understandable. But it isn't often that we have someone who does all of that, and still manages to find time to be a published author of ten refereed publications, eight articles, 15 abstracts, and five manuscripts in progress. (A refereed publication is one that has been submitted for peer review and approved for publication. It is a very long, tedious process, often involving several years work from start to finish, together with major revisions.)

So why is Fryxell at CSUSB? She had three choices: work for a "top rank research university," work for a major oil company (i.e., Exxon) or teach here. "I made the decision to not work at a top rank research university, because the people are not well balanced. You would have to be a very smart maniac and devote your life to your field. Outside interests are not really possible. They expect all of your life (nights, weekends, etc.). I have a life, I like having a life. This precludes teaching for these types of universities," Fryxell confided.

As for the Exxon option, a position that would have paid twice the salary she is currently earning, Fryxell said, "In their research lab, every person in the lab is a friend of mine—they are all nice people, first rate geologists, etc. It would be a fabulously enjoyable environment to work in—money to do projects, friends, benefits, etc., but...the geologists don't get to do field work and very little work is publishable. Whatever I discovered, I wouldn't be able to disseminate. It would remain as in-house reports for Exxon. I really strongly believe that your obligation in doing research is to share the knowledge. What is the point of learning if you can't share it?"

And as for CSUSB, Fryxell is happy. "Here, I have more opportunities for field work. Seeing it, putting the ideas together while I'm standing on the problem has a reality that looking at the seismic sections will never get. I enjoy teaching; I like sharing the ideas that I find exciting and stimulating with other people, and it's especially satisfying when they catch fire about it and think it's really cool," said Fryxell. "I think the CSU system is a very important way to make a university education available to people that can't move to the university, live in the dorm and be a full-time student. We have to go to the students, otherwise they couldn't have a first-rate university education."

Geology 101 is a fulfillment of one of the general education requirements. It is also an area where some people are introduced to geology, (and oftentimes science) for the very first time. "With people taking geology, they have the opportunity to connect with the idea that science is relevant, science is accessible and in particular geology plays a role in their lives," said Fryxell. "Those are my objectives in 101. With geology majors, I can provide a solid, broad background that will impact the processes has created the problem. In large part, understanding geology prevents these kinds of problems. It is always cheaper to prevent a problem than to fix it."

The ultimate reason for loving, geology is because, "It's fun! What other kind of job requires you to apply your mind to solving a major puzzle in 3D? When I'm doing field work, I get to gain more detailed knowledge and experience with entire mountain ranges than is possible in any other way," said Fryxell.

"Sometimes I hate the weather, the gnats, or even the rocks, but sometimes it's the best experience I could ever have."
RIVER AND STONE:

MODEL AFTER A MASTER (second in a series)

Derrick Edward Sergeant
Chronicle Staff Writer

The beaver had a small problem. When the good Lord created the living things that would inhabit this world, He made some animals to be very unique; he created an unusual breed of beast that can survive without any difficulty in a wide range of different environments. The beaver is one such animal. It can live on the land or survive in the water. It can roam the wide open spaces on its short, webbed feet, or it can use those same feet to swim through the waves. It is a beautiful, amazing, and intelligent animal. I say beautiful for with its long body, a full quarter of which is made up of just a broad, paddle-like tail, and the rest covered with brown or tan fur, it is a lovely animal to behold (remember, beaver fur became so valuable because of its beauty and water resistance that a trapper could buy the ship it down to some of the most experts as the most poten-
tially vulnerable flood plain west of the Mississippi River. That means there was the very high potential for enormous floods that could rob thousands of people of their lives. But man was not to be caught off guard or forced to retreat because of something like this.

On the Santa Ana River there is a dam named Prado (refer to part one). It slows down the flow of the river and diverts some of the water into pipes and channels that ship it down to some of California's far southern districts, like Orange County. It also helps hold back flood waters. But in 1997 it was feared the dam was not high enough to effectively stop floods from reaching over it's top. So, billions of dollars and lots of human effort have gone into raising this dam so that the threat of floods can be reduced. This is part of a massive project along the Santa Ana River that will dramatically lessen the chance of any flooding ever taking place again. It is truly an amazing feat of human engineering and ingenuity.

The Santa Ana River Woolly Star had a small problem. Making its home near the banks of the Santa Ana River, this woody, flowering plant can grow up to thirty inches tall. It has wool-colored, divided leaves and a slender, tubular flower that opens up brilliantly near the tip. This flower has a slightly lavender color. It lives for about five years, but with the massive flood control project underway on the Santa Ana River, the flow of water has been reduced. The sand that this flower depends on is no longer reaching them. Without this sand, the seeds of the flower cannot grow. The species will be exterminated. But man will not be stopped by something as small as this.

Some 764 acres have been permanently set aside for exclusive use by this flower. And scientists will even bring the much-needed sand to the woolly star so that it can survive. The species has been dis-

Adobe Sets Graphics World On Fire

Adobe Systems has built a new, state-of-the-art publishing tool. InDesign is an efficient, innovative layout and design program, including some of the best features of Illustrator, PageMaker and QuarkXPress. InDesign is packed with more than 1,300 features and provides a number of powerful plug-ins that handle type, color and printing. These plug-ins make it less costly to update InDesign, because Adobe or any third-party developer can modify, remove, add, or replace the plug-ins.

InDesign has common tools, commands, palettes, keyboard shortcuts that will work with other page layout and drawing programs while offering support of PDF files, which are playing an increasingly important role in prepress workflows. When you paste or drag-and-drop native Illustrator artwork into InDesign, the elements become editable objects. InDesign offers artistic freedom and powerful tools that help you realize your creative ideas.

When you place an element (text or graphic), InDesign automatically places the frame instead of forcing you to stop and create a frame first. You can even paste a frame within a frame. What's more, you retain complete control over these frames.

Gradient fills and strokes can be used whether you're adding contours to shapes or creating whimsical color combinations.

InDesign provides a number ofBezier path tools. There's also a scissors tool for cutting paths.

InDesign lets you combine multiple paths into compound paths to create unusual shapes with transparent areas. And you can convert text to paths and then fill those paths with images, graphics, or text.

InDesign offers an extraordinary range of productivity and enhancing tools to help you do the most creative work possible while meeting your deadlines. InDesign also offers QuarkXPress keyboard shortcuts and an editor that allows modification. Multiple undo and redo are two of the favorite features. InDesign supports page sizes from 1 pica x 1 pica to 18 ft. x 18 ft.

The program has innovative composition engines, layout features and kerning. You can zoom to any level between a five and 4,000 percent view. For those who use the current version of Adobe's PageMaker, don't lose heart. You will be able to upgrade to InDesign. Adobe Systems will continue to support PageMaker, but will change its emphasis from graphic arts to supporting the needs of today's business community.

For more information visit: www.adobe.com/prodindex/indesign.

Contributed by Jill Dahlman

Adapted from "Another Lesson in Life" (from the book "First Things First" by Stephen Covey)

One day an expert on time management was speaking to a group of business students and, to drive home a point, used an illustration those students will never forget.

As this man stood in front of the group of high-powered over-achievers he said, "Okay, time for a quiz."

Then he pulled out a one-gallon, wide-mouthed mason jar and set it on a table in front of him. Then he produced about a dozen fist-sized rocks and carefully placed them, one at a time, into the jar.

When the jar was filled to the top and no more rocks would fit inside, he asked, "Is this jar full?"

"No!" the class shouted.

Then he grabbed a pitcher of water and began to pour it in until the jar was filled to the brim. Then he looked up at the class and asked, "What is the point of this illustration?"

One eager beaver raised his hand and said, "The point is, no matter how full your schedule is, if you try really hard, you can always fit some more things into it!"

"No," the speaker replied, "that's not the point. The truth this illustration teaches us is: If you don't put the big rocks in first, you'll never get them in at all."

Then he said, "Really?" He reached under the table and pulled out a bucket of gravel. Then he dumped some gravel in and shook the jar causing pieces of gravel to work themselves down into the spaces between the big rocks. Then he asked the group once more, "Is the jar full?"

By this time the class was onto him. "Probably not," one of them answered.

"Good!" he replied.

He reached under the table and brought out a bucket of sand. He started dumping the sand in and it went into all the spaces left between the rocks and the gravel.

Once more he asked the question, "Is this jar full?"

"No!" the class shouted.

"No," the speaker replied, "that's not the point. The truth this illustration teaches us is: If you don't put the big rocks in first, you'll never get them in at all."

Q: How can I write for the Chronicle if I don't have a lot of time to commit?

A: Freelance. Write what you want, when you want! Call (909) 880-5289 for more information or email features2editor@members.student.com today.

Buying Grades

A professor was giving a big test one day to his students. He handed out all of the tests and went back to his desk to wait.

Once the test was over the students all handed the tests back in.

The professor noticed that one of the students had attached a $100 bill to his test with a note saying "A dollar per point."

The next class the professor handed the tests back out. This student got back his test and $64 change.

What are the 'big rocks' in your life?

A project that YOU want to accomplish? Time with your loved ones? Your faith, your education, your finances? A cause? Teaching or mentoring others? Remember to put those BIG ROCKS in first or you'll never get them in at all.

So, tonight or in the morning when you are reflecting on this short story, ask yourself this question: What are the 'big rocks' in my life or business? Then put those in your jar first.
The Unseen Disability

By Carrie Anne Still
Chronicle Staff Writer

So, you think your eyes are bad? Start counting your blessings now, it's probably not as bad as you think. Thousands suffer from various kinds of retinal blindness in America, and end up with all or part of their vision seriously impaired or destroyed.

Macular Degeneration is one of those diseases, and Sam Romero is one of those people. The extremely sensitive macula is located in the center of the retina. It provides us with sight in the very center of our visual field. Sam Romero works in the Public Affairs office here at CSUSB. Among other things, he deals in media relations, writes for the Cal State Magazine, writes press releases, etc. Sam has Macular Degeneration.

The macula allows us to see fine details when we look at something. It is the sharp detailed vision necessary for reading, driving, recognizing faces and other close-up work. Macular Degeneration damages that central vision. Sam tried to help me understand a little of what it was like.

"When I look straight at something, I don't really see it," he said. "It's like when someone takes a picture with the flash on, the person getting their picture taken is blinded for a moment by the flash and they have that little spot there... This is kind of at those last stages just as the spot is disappearing. You can't see anything in that spot."

MD is more common in people over 60; however, some develop it as young as 40. There are some rare cases—like Sam's—when it is developed at a very young age. In his case, like many others, it was hereditary. "I first started noticing it when I was about 13... it was several months before they actually diagnosed me as someone having Macular Degeneration." When they first started measuring his vision it was around 20/100 and since has progressed to about 20/450 (with corrective lenses) where it has stabilized for the most part.

The "good" news is that MD doesn't affect peripheral or side vision. Sam's peripheral vision is in effect, his main vision. When, for example, he talks to people he looks at them from the side. "It throws people off a lot of times, because they think I'm not paying attention." He laughed.

The cause of Macular Degeneration is unknown, and at this point it is not curable. The goal is to better or stabilize the condition. This can be done in different ways, from nutrition to laser surgery.

"I find the limitation more annoying than I do life-altering," Sam said. "I still play basketball, I still play volleyball, I still read..." Macular Degeneration is potentially a very limiting disease. But some, like Sam Romero, just choose not to be limited. To live life to its fullest in spite of it all.

For more information on Macular Degeneration you may contact the American Academy of Ophthalmology.

Chronicle Staff Writer

What is it that everyone has, but doesn't always use? Better yet, takes for granted until you lose it? The answer is—you brain! The brain is perhaps the most fascinating conundrum to have puzzled philosophers through the ages. It is a complex organ of us should practice using it more often, yet no one is really sure how it works.

The real mystery about it is that as you try and figure out how it works, your brain is what you're using to decipher the mystery! Most of us take it for granted and often forget that it's even there, until you get one of those million-in-one Excedrin headaches. But I guarantee you, if you ever lost any portion of the use of your brain, you'll never neglect it again.

Closed Head Injuries (C.H.I.), Traumatic Brain Injuries (T.B.I.), and Acquired Brain Injuries (A.B.I.) are just a few of the labels given to the disabilities stemming from damage to the brain.

Inclusive of any injury to the brain that a person is not born with or inherited. Acquired Brain Injuries can range from blows to the head during an automobile accident, to a stroke or heart attack restricting oxygen to the brain or to a simple fall on the old noggin while skateboarding. Nonetheless, any damage to the brain from an outside force/source can be detrimental.

I am a disabled student here at CSUSB. I became disabled in 1993, when I was struck by an 18-wheel diesel gravel truck on the 605 freeway while driving a Toyota Corolla. To say the least the accident was horrific, but I survived. Among a cascade of injuries, the worst was the damage to Acquired Brain Injury.

The left hemisphere of my brain was severely damaged, as well as the frontal lobe in the sinus area. The damage to the left hemisphere left me without the ability to read, write or talk. Physically, my spinal cord was twisted out of its natural curve, my left shoulder was separated from the collar bone, and my left jaw was knocked out of socket. In essence I was a mess.

After rehabilitation and therapies of all kinds, I was allowed to go back to school. At the time of the accident I was a junior at Cal-State Long Beach. After the accident I had to take pre-baccalaureate studies, but I was able to begin a bachelor's degree at CSUSB.

The Most Common Form of Blindness

Symptoms of Macular Degeneration include dark or empty areas in the center of vision.

By Carrie Anne Still
Chronicle Staff Writer

Macular Degeneration is one of those diseases, and Sam Romero is one of those people. The extremely sensitive macula is located in the center of the retina. It provides us with sight in the very center of our visual field. Sam Romero works in the Public Affairs office here at CSUSB. Among other things, he deals in media relations, writes for the Cal State Magazine, writes press releases, etc. Sam has Macular Degeneration.

The macula allows us to see fine details when we look at something. It is the sharp detailed vision necessary for reading, driving, recognizing faces and other close-up work. Macular Degeneration damages that central vision. Sam tried to help me understand a little of what it was like.

"When I look straight at something, I don't really see it," he said. "It's like when someone takes a picture with the flash on, the person getting their picture taken is blinded for a moment by the flash and they have that little spot there... This is kind of at those last stages just as the spot is disappearing. You can't see anything in that spot."

MD is more common in people over 60; however, some develop it as young as 40. There are some rare cases—like Sam's—when it is developed at a very young age. In his case, like many others, it was hereditary. "I first started noticing it when I was about 13... it was several months before they actually diagnosed me as someone having Macular Degeneration." When they first started measuring his vision it was around 20/100 and since has progressed to about 20/450 (with corrective lenses) where it has stabilized for the most part.

The "good" news is that MD doesn't affect peripheral or side vision. Sam's peripheral vision is in effect, his main vision. When, for example, he talks to people he looks at them from the side. "It throws people off a lot of times, because they think I'm not paying attention." He laughed.

The cause of Macular Degeneration is unknown, and at this point it is not curable. The goal is to better or stabilize the condition. This can be done in different ways, from nutrition to laser surgery.

"I find the limitation more annoying than I do life-altering," Sam said. "I still play basketball, I still play volleyball, I still read..." Macular Degeneration is potentially a very limiting disease. But some, like Sam Romero, just choose not to be limited. To live life to its fullest in spite of it all.

For more information on Macular Degeneration you may contact the American Academy of Ophthalmology.
Disability continued from page 16

I ate classes to relearn how to read and write well, also to work my way back into freshmen level classes.

Today, I am at that freshmen level again. I never gave up, although many times I wanted to. This is the beginning of the rest of my life. I learned to appreciate the brain and body that God had given me.

ABI, CHI, and TBI are all interrelated symptoms of the same problem, but the most detrimental part of my experience were those times when I felt I couldn't handle my new life, the new Ruben. There is hope for anyone who must go through such trials and tribulations, as long as you do not lose heart.

Brain injuries are most elusive, many times categorized with epilepsy and other related seizure disorders, but that is only due to the lack of research done on the topic. They remain elusive simply because doctors and scientists do not yet fully understand the workings of the brain. They cannot fix what they don't understand.

These are some of the mysteries behind Traumatic Brain Injuries. That being said, take some time to say, "Hello" or "How are you?" to a disabled person. Or just offer some help to those you may come across. Don't worry we don't bite!

Health Fair

By Robin Johnson
Special to the Chronicle

The ASI Health & Safety Chair in accordance with CSUSB Student Health and Counseling Center, MAPS, Nutrition Students, and Kinesiology Students are proud to present the Student Health Fair '99. The Fair will take place on April 28th in the Events Center and quad area from 10am to 3pm. Please wear comfy clothes and shoes for there will be a power aerobics instructor on campus that day teaching a step class. Other entertainment will be line dancing and Hip Hop music.

The CSUSB student's health fair has been in existence for five years. The whole event started when 5,000 measles shots needed to be dispensed. But since, much more has happened. In the past there have been booths sponsored by the local Police and Fire Departments. There also has been TB and glucose screening's. Additionally, the nutritional students have provided recommendations for healthy diet.

This year the nutrition students are planning to hand-out special healthy menus to students. Additionally, this year however, the focus will concentrate upon mental and physical fitness rather than actual screening's. For example, the aerobics instructor along with community leader Rod Cole will be showing students how to handle tension management. Mr. Cole will also be conducting a demonstration in the art of Tai Chi, a form of Asian fighting.

Doc in the box and 'shrink in the box' will be giving away healthy brochures and goodies to students for the asking. The Student Health and Counseling Center has plans to hand-out free First Aid kits and will have 'cold packs' for a small fee.

Other community resources such as Loma Linda's Behavior Medicine Center, plan to provide student stress tests and quick-tips for different mind and body problems. This year's theme of course is, 'Fitness in Hawaii', so be ready to join us and have some tropical fun!

If you or your club are interested in participating in the event, please contact Robin Johnson ASI Health & Safety Chair campus extension 7210, or call Debbie Galvan RNC, the supervising nurse at the Student Health Center.

The Few, The Proud.
Coyotes Sweep Cal State Los Angeles

By Richard Contreras
Sports Editor

CSUSB beat Cal State Los Angeles 9-5 Sunday April 18 to complete a home and home series sweep over the weekend.

The Coyotes (15-17, 22-20, overall) moved within two and a half games of a post-season playoff spot.

Freshman pitcher Eric Hulfert went the distance striking out four while allowing five runs, all earned.

The Coyotes struck early using a three run second and a four run third to overwhelm CSLA.

Senior catcher Adam Dick went 3-4 and Senior shortstop Todd Rasmussen drove in three runs.

The top four teams out of the CCAA will advance to the baseball championships to be held at Chico May 6-8.

Cal State San Bernardino is in a favorable position because conference-leading Grand Canyon is not eligible to compete in the tourney this year.

CSUSB has eight games left in the regular season to determine their post-season fate.

They will play a final home series this weekend against San Francisco State at Fiscilini Field.

CSUSB Wins Two at Bakersfield Tournament

By Richard Contreras
Sports Editor

The Coyotes lost to UCR 2-1 to cap off play at the Mountain Dew Classic held at Cal State Bakersfield last weekend.

CSUSB did triumph over Cal State Bakersfield and Cal State Dominguez Hills 5-2 and 4-2 respectively before bowing out and failing to place in the non-conference tournament.

Cal State continues to maintain its third-place position in the CCAA, and keeping its hopes alive for a post-season berth.

The Coyotes face tough back-to-back doubleheaders on the road this weekend against Cal State Bakersfield and Cal State Dominguez Hills before returning home next Friday to face San Francisco State.

**OUTDOOR ADVENTURES**

- Cure spring fever with a cold shower
- Splash into the fastest, wildest rapids of the year on the Kern. Through May 13, you and a boatload of friends can escape for a day of rafting for just $300 weekdays, or $400 weekends (that's for each boatload of up to six people). Call 1-800-323-4234 and ask for the boatload deal and wrap up the term with a cool head.

Outdoor Adventures is a service of Sequoia National Forest.
And that's the rest of the story...

DAM cont. from pg. 14

placed by man, but at least man is trying to make up for the displacement. They have made a wholly star reservation of sorts.

Everyone in Southern California had a problem.

This place is notorious for droughts. Nearly all the water used here has to be either imported or pumped up from the ground. And that has given rise to major complications.

Groundwater comes from rain and other forms of precipitation that has trickled through the ground until coming to rest in an area where it can no longer trickle down.

Over the years, if left undisturbed, this water can build up to quite high levels, the top of which is called the water table. On average, the groundwater in most areas rises about four inches per year. But in very dry areas, such as Southern California, the water is pumped at a rate of ten feet per year! Obviously, something is out of balance. However, man will not be made to give up because of something like this.

Dams are built on nearly every available river and the water is brought from that area to this one. Indeed, in the 1930's, many water districts and even Congress considered it a colossal waste of a vast amount of potential water resources to have any Western river flow uninterrupted to the sea. Whether needed or not, there must be a dam of some sort built on it. This is a concept that has endured, to a certain degree, even to our modern times. In this way, the potential problem of using up one water resource is eliminated by tapping into another.

Why does man do all of these things? In order to eliminate the threat of flooding, we build dams to hold back the water. But in holding back this water, we also hold back the sand that another species needs in order to survive. If those flowers were sentient, that might be called genocide. In order to have enough water, we build dams on rivers far away, a

The huge pumphouse—whose 12 pumps can move 1,400 gallons of water per second—looms over the 34 acre forebay, which served as a 163 million gallon pool to hold water to be later pumped into the reservoir.

Photo by Carrie Anne Still.

Stoner cont. from page 7

Stoner also talked about the EXPO and Earth Day.

EXPO has received numerous awards such as from Keep America Beautiful. This year's EXPO will receive a proclamation from the City of San Bernardino. EXPO is one of the largest environmental fairs and Earth day activities nationally. Cal State San Bernardino has become known for its environmental commitment because of the environmental EXPO. EXPO is free because of its sponsors such as CSUSB, San Bernardino County Sun, County Of San Bernardino Waste System Division Norcal/San Bernardino, Inc. California Department of Education, South Coast AQMD, just to name a few as well as Volunteers who are mostly high school students. There are 30 member of the planning committee which is made up of students, faculty, staff and the community. Over 150 Volunteers will be helping the day of the event. This year's EXPO will be great fun for kids and adults and all are encouraged to attend.

Dr. Stoner also included this comment in her interview.

Earth Day gives us all a chance to address environmental challenges that are vast and woven into the entire fabric of our life. To solve them we need a shift in our way of thinking and doing things. This is what I call developing an environmental consciousness. We must not be afraid of dreaming of the possibilities for a sustainable lifestyle that is compatible with all life on Earth. A Healthy Economy goes hand in hand with a health environment. Along with this, we must be willing to dedicate some of our time to making these dreams possible. This dedication can be through the job we chose and/or our volunteer efforts. Some of today's visionaries will be tomorrow's leaders. We have an urgent need for a unified effort by all of us. If anyone is left out they are endangering both themselves, and society."

Mestizaje cont. from page 6

Either way, both views are unnecessary. Both terms are labels based on language. Hispanic in English, Latino in Spanish, Latino, Romanian, Italian, etc. There should and must be a reconciling of this difference among our people. We have enough struggles in life, why add to division over terms that very few seem to recognize the insignificance of? We are the Hispanics, Latinos, Mestizos, etc., why allow a label to cause division and to change our fortune? The lesson for this week, don't be deceived by the hype! Somos unso, somos familia! We are one people, we are family! Until next time , Dios lo vendiga! God bless you!

Capstone cont. from page 4

...entrate more on their majors.

The professors teaching in these departments overemphasize their issues to students not familiar with the topic. Sometimes these classes require more responsibility than mandatory courses for the major. The amount of work involved in this requirement should be limited, and instructors should follow the same curriculum when teaching them.

The information learned is not new to us. We have been learning about humanities, social and natural sciences since we began school, familiarizing these areas thoroughly by now. They think we do not comprehend concepts the first time, so they force it into our heads until we don’t care anymore, causing our grades and GPA to suffer miserably.

The average student knows the basics. We should be freed from the heavy loads and the useless information these Capstones require us to learn. Don’t they think we have enough to learn already? Rather than focusing on a specific goal, the distraction confuses the mind. Students should be focused only on their majors and what they want to do with that. How am I going to use natural science in my journalism career? How is a math major going to use humanities on his or her calculations?

These are the questions that make me ask: Capstones, do we need them?
Horoscopes/Comics

Aries: (3/21-4/19)
Life should start looking up this week. Everyone wants to be a part of what’s happening to you, including your family and friends. Personal power can be a public experience, but don’t abuse it. There’s a possibility for some new romance so keep your eyes and ears open. This special.

Taurus: (4/20-5/20)
Determined to come out on top? Surely there’s an easier way like callous disregard. Virtues may sound a lot like an agenda, but associates are quick to believe in you. You should be proud; however, don’t waste too much time patting yourself on the back. You suddenly have the resources to make it all come true. Also, romance is at a halt, so use the extra time studying for upcoming midterms.

Cancer: (6/21-7/20)
Keep your emotions in check! You’re quick to anger at a time when you should be quick to forgive. The world of business is not a good place to vent your personal grudges. Petty actions can only dishonor the dreams that keep you going. So what can you do? Release your pent-up energy by taking up an extracurricular activity or hanging out with a friend.

Leo: (7/21-8/20)
People around you may appear a little melancholy. Fortunately, it doesn’t take much effort to brighten someone else’s day. Make a colleague laugh or lighten up a friend with your witty tongue. They’ll appreciate your humor. In the love department, your partner may not seem as supportive as you like. Instead of playing the blame game, calmly explain how you feel. Communication is key to a healthy relationship.

Virgo: (8/21-9/20)
If you have been witnessing changes lately, this is because little variables affect the spin in subtle ways. This week, you should see evidence of a gradual change that has previously escaped your attention. Socializing is effective for your personal life, but in business, your concentration is much better when you work alone. With this approach, you should be well-prepared for upcoming midterms.

Libra: (9/21-10/20)
Work and school seem to be in balance, but your love life appears bumpy. This week may be bittersweet times in a relationship. Ending it all would be liberating if you could handle the pain. Renewing your vow leaves you wondering about the world outside your familiar self. Your decision doesn’t have to be an ultimatum. Keep your opinions open and concentrate on other aspects of your life.

Scorpio: (10/21-11/20)
Don’t stop sending out your energy! The minute you reverse the flow, you are opening the door to all kinds of malignant debris. With all the chaos going on around you, there’s no need to make your life anymore complex than it already is. Don’t neglect your studies, but grab a few friends to see a new flick. You’ll have more fun than staying home.

Aquarius: (1/21-2/19)
This is the time to make magic happen! Your upbeat approach to the world brings you luck and physical strength. You have been flooded with new opportunities, both in business and love. Take advantage of this good fortune and live up to your full potential. Freedom and success are within your reach if you are ready to go for it.

Capricorn: (12/21 -1/19)
How fortunate for you. The water you drink seems to have been bottled at the fountain of youth. Your week sparkles with romance and adventure. Instead of boredom, you may be on your toes all week with exciting opportunities. However, think before you speak. Sensitive souls may not appreciate your usual cynicism and irony.

Pisces: (2/21-3/20)
Share your thoughts with the people around you. Your opinions are really worth something. If you remain silent, others around you may begin to assume you are invisible and all the hard work may go unnoticed. Pull back the curtains and let the full force of your personality shine in. This week is your chance to make dreams become reality.
