Large amounts of rainfall flooded a good portion of the CSUSB campus on the weekend of Oct. 13, 2006.

CSUSB became engulfed with heavy rain, sleet, and hail around 11:00 p.m. on Friday the 13th. There were also strong winds that blew through school pathways.

The campus weather station reported 2.24 inches in less than two hours. In a half-hour period there was a 1.81 inch downfall.

The large amount of water that flowed through the campus picked up mud, leaves, and hail. The water then carried the material into the interior ground drains. The drains became clogged as they could not capture all the flowing water, Vice President for Administration and Finance David Demuro reported in a campus-wide email. The buildings became full of the "mud soup" that the drains clogged. Some of those facilities

Heavy rain, steel, and hail, caused flooding on the lower levels of various buildings on campus.

CSU named one of top Green Power users

Shane Olga
Staff Writer

The Environmental Protection Agency (EPA) named California State University the top 25 campus generator of Green Power.

The CSU also ranked second in the EPA's top 10 College and University Green Power Partners, with over 73 million kilowatt-hours (kWh) voluntarily purchased through September 22, 2006.

Green Power is defined as electricity that is generated from environmentally friendly sources, such as solar, wind, geothermal, biofuels, biomass, and low-impact hydro.

Renewable, Green Power energy sources are cleaner than conventional energy generation systems. Conventional energy systems burn fossil fuels that create carbon dioxide, a greenhouse gas.

CSUSB is in the process of installing new renewable energy sources. Buildings will soon feature photovoltaic panels such as those pictured above.

CSUSB offers computer engineering degree

Frank Beatty
Staff Writer

Six years of effort has lead to the birth of the new Bachelor of Science in Computer Engineering degree at CSUSB.

Dr. Keith Schubert, assistant professor of Computer Science, explained that the new degree falls between the existing areas of Electrical Engineering and Computer Science.

Faculty members from both the physics and computer science departments, including Arthur Concepcion, Keith Schubert, Tim Usher, Ernesto Gemel, Paul Dinten, Tatsha Karmat and Tony Yang, helped design the program.

After the initial planning phase Schubert was hired five years ago to help develop this degree.

"Computer engineering started in the 1960s and is still new and dynamic," said Schubert.

Five students have started preparing for the new degree and will be able to officially change their majors next year.

According to Schubert, this is a year and a half ago the final version of the program was submitted to the state university system Chancellor's office.

After comparing the plan to that of other Cal State programs, it was accredited in the spring of 2006.

CSUSB has nine engineering programs overall.

Traditional light bulbs add up

Rodolfo Segura Jr.
Staff Writer

In an effort to change the world, Energy Star's new campaign, which involves replacing one light bulb for a fluorescent light, may be the answer.

"Light a Change," the Change the World campaign is the name of the campaign. The program's main goal is for every single household in the nation to change at least one standard light bulb for a compact fluorescent one.

According to the California Energy Commission's Consumer Energy Center website, the program will run from Oct. 1, 2005 to Nov. 30, 2006.

"Together we can change the world by using more energy efficient lighting and appliances, which also reduces greenhouse gases in the environment," the website states.

In California alone, changing one light bulb for one compact fluorescent bulb can reduce energy use by up to 60,000 hours of electricity in one year. That's enough energy to light all the households in Sacramento for 660 days, or almost two years.

Fluorescent bulbs, the ones being promoted in this project, can last up to 30 times longer than an ordinary bulb.

Fluorescent light bulbs also generate 70 percent less heat than a regular bulb. A regular bulb, on the other hand, creates greenhouse gases in the environment.

According to Joseph Trimble, current Energy Advisor to Governor Schwarzenegger, this is a perfect example of how small steps can effect big changes.

Trimble also said that if you cut your home energy use, you could reduce pollution from power plants.

According to Trimble, changing just one 75 watt light in your home to a more energy efficient 20 watt Energy Star bulb or fixture can be good for the environment as well as for your pocketbook for more than two weeks.

Trimble was the Chairman of the California Energy Commission in 2005. Fun fact Continued on Pg. 2

Traditionally, fluorescent light bulbs last longer and generate less heat than regular ones.

Work crews are hard at work cleaning up and restoring CSUSB buildings that were affected by the flood that hit the campus on Friday, Oct. 13, 2006.

Some of the buildings affected are the University Hall, the Student Union and the entire basement of the bookstore.

An update was done on Saturday, Oct. 14, 2006 to determine what needs to be repaired.

The University brought in experts from AIC Services and Belfor Property Restoration to inspect the area and make recommendations.

The companies' recommendations were to remove the base­board, to remove drywall up to the height of the water level and to remove any insulation that was wet in the walls.

After that, the walls that were exposed were boarded up and chemically treated. The drywall, repairs, paint and the base­board are expected to be dryed out and restored.

CSU turns out more and more grads

Ethnic trends are also changing. The report shows increasing enrollment and graduate statistics. The biggest increase was in Latin American and Latino graduates, demonstrating the diversity of the CSU system, according to researchers.

When looking at CSUSB specifically, the Office of Institutional Research reports growing ethnic trends and trends similar to system-wide findings. For the 2005-2006 academic year, CSUSB graduated 2,657 bachelor's degrees and 801 masters for a total of 3,458 degrees awarded.

Ross T. Meny, director of Institutional Research at CSUSB, attributed different factors contributing to growing enrollment statistics. “It is difficult to generalize because much of the action is at the Department level,” Ross said. “Social work, for example, brings in students as electives that may seek out programs for enrollment assistance. The MHA program relies heavily on international students and they want to deal with the national phenomenon of lower costs in their home countries as well as for the student. Many CSUSB students are the first in their family to attend college and have no role models for how to proceed.”

Sixty percent of bachelor’s degrees and 63 percent of master’s awarded in 2005-2006 went to women, continuing the trend of increased female enrollment and graduate numbers.

Economic trends are also changing. The report shows increasing enrollment and graduate statistics. The biggest increase was in Latin American and Latino graduates, demonstrating the diversity of the CSU system, according to researchers.

Flood of pictures worth thousand words

Pictured above are images of some of the damage caused by the flooding. Rain water flooded lower levels of various CSUSB buildings. Hail compounded water collection in buildings and caused some collateral damage as well. Also shown are workers from Belfor Property Restoration, one of the companies contracted to execute repairs, who are working to restore CSUSB property.

Associated Students, Incorporated's (ASI) mission is not only to entertain students here at the California State University, San Bernardino campus, but to bring a sense of pride to our students, alumni and family friends.

This Friday, Oct. 27 at 6:30 p.m., ASI will be hosting a Pop Rally before the CSUSB-women's volleyball team takes on Humboldt State University at the Coussoulis Arena.

At this rally, there will be face painting, raffles, contests, free pizza, drinks and free ice cream. Our very own CSUSB Coyote Radio will be providing on-air entertainment. This event is free of cost for all CSUSB students.

The purpose of this rally is to give everyone who attends encouragement to build a larger sense of coyote pride and to show support to the CSUSB teams.

A pop rally is simply a way of pumping up the crowd's enthusiasm before an athletic event. Depending on the campus and the event a pop rally can differ in what is celebrated, done, given, and cheered.

Students, alumni, friends, family and the community at large are all welcomed to attend in hopes that eventually the 5,000-seat arena will be filled with a large crowd.

Teddy Rodriguez, who is the ASI Vice-President of University Affairs, hopes to increase student involvement and participation with CSUSB athletics in general.

"This Friday, Oct. 27 is the last opportunity to join the fun! ASI is also working towards having more activities during the basketball season."

ASI hosted a paid pop rally for our women's volleyball team. The volleyball team is ranked number three in the nation and going strong.

"We have the right mix to put together a good team," said Melanie Lindsey about her poem "The Whole Truth.

"Ripple, Holyman," said the audiovisual technician, James Fukazawa. "This was due to the fact that Technical difficulties that did not allow us to present the program as we normally do."

"I was breaking the Jaw," the poem "is a pleasant surprise to see students reading literature for required reading," said Manuel Delgado, member of the ASI Activities Board.

"Sports and university affairs are generally Monday's but about how much fun we have," said Nancy Coria, President of University Affairs.

"The ASI Activities Board works with the Vice President of University Affairs to make Open-Mic Night and other events such as Karaoke Night and Movie Night a possibility.

"The event is open to students and faculty. The Poets and Writers who aim to create a space for the students and faculty here at CSUSB to come together to share their work," said Nancy Coria, President of University Affairs.

"I think this is an opportunity for students to express their creativity and to engage with each other in a fun and creative way."

Many students do not have the time and money to drive far for custom work, so they are also able to customize awards, laser engrave, make decals, embroidery, make wooden letters and symbols, or do more intricate work like jewelry, and even do anything you can think of!

For more information, contact Nancy Coria by email nancycoria@msn.com or contact Corporate Gifts & Trophies at (714) 872-0442.

"Having items here on campus provides easy access to purchase custom work (rather) than going online," said Nancy Coria, President of Sigma Pi Alpha.

"They are more expensive and with me I don't worry about messing up orders. Also, it is closer or driving to our nearest Greek store is more convenient for everyone," said Nancy Coria, President of Sigma Pi Alpha.

Coria suggested bringing Corporate Gifts & Trophies on campus to not only promote the business but also to save on gas money.

Diabetic breakthrough

Clarissa Zamora Staff Writer

The Food and Drug Administration approved a unique pill (Januvia), sitagliptin phosphate, enhances the hormone that triggers the pancreas to produce more insulin to process blood sugar while simultaneously signing the # to the patient for the cells in the body, and insulin takes the sugar from the blood into the cells.

The percentage of adults ages 20 and older in the U.S. has grown from about 3 percent to 6.5 percent, according to researchers at the National Institute of Health (NIH) and the Centers for Disease Control Prevention (CDC).

More than 230 million people worldwide have diabetes, up from about 330 million in 2005, according to the International Diabetes Federation. Diabetes is expected to affect 700 million people by 2030.

Global warming, death of our Earth

Kevin Lyons Staff Writer

Global warming could cost the world's economy $11 billion by the end of the century if necessary actions are not taken to address the quickly expanding issues, according to two American economists at Tulane University's Global Development and Environmental Institute, through a report which was commissioned by Friends of the Earth.

Their report claims that the estimated figure of up to 6 to 8 percent of the gross domestic product could even be underestimated due to the fact that it does not include certain unknown future expenses, such as the cost of biodiversity loss, or of suffering events to come.

What is global warming? The website Stop Global Warming.org defines the issue by stating that the Earth is an ecosystem that is changing, attributable in great part to the effects of global warming and man. More carbon dioxide is now in the atmosphere than has been in the past 650,000 years. This carbon dioxide stays in the atmosphere, acts like a warm blanket, and helps to heat in the hunt, hence the name "global warming." The economic battle is now to prevent a two degree or more above pre-industrial levels, and at this rate temperatures could increase by more than 2100.

The report of the New England Institute is important in that it discusses the effects of global warming on the environment can be seen already, and will only continue to grow in severity.

Global temperatures have already risen by 0.6 degrees centigrade above pre-industrial levels, and at this rate temperatures could increase by more than 3 degrees centigrade by 2100.

The report of the environmental impact of this very real problem. The effects of global warming on the environment can be seen already, and will only continue to grow in severity.

Global warming and climate change. The main effect of global warming is the increase in the earth's surface temperature. This increase is caused by the greenhouse effect, which is the natural process that helps keep the Earth warm. The greenhouse effect is caused by the presence of greenhouse gases, such as carbon dioxide, methane, and water vapor. These gases trap heat from the sun, preventing it from escaping into space and warming the Earth. However, when greenhouse gases are released into the atmosphere in large quantities, as happens with global warming, they can cause the Earth's temperature to rise, leading to a number of negative effects.

Global warming is not an isolated issue. It is a global phenomenon that affects every part of the world. From melting ice caps to rising sea levels, from extreme weather events to loss of biodiversity, global warming has the potential to create significant and far-reaching impacts on our planet. It is therefore important for us to take action to mitigate the effects of global warming and protect our planet for future generations.
If you are looking for a quiet and affordable vacation, perhaps you should consider Hollywood, which has a lot to offer.

Around 75 miles away from Hollywood is the city of entertainment. If you're hungry, why wait? Hollywood is definitely a new experience. If you still want to go and things to do.

Hollywood, the city of entertainment, is usually their first stop. Johnny Rockets, a classical 1950's diner shopping.

When big Hollywood studios want to kick-off a new film release, The Mann's Chinese Theater is usually their first stop. The theater is unforgettable with dinner. Juicy burgers and real ice cream shakes are served in a plastic cup with a really thick straw. As you drink it the toppings boba balls get sunk up through the straw. The boba that I ordered was very good with a sweet taste that tickled your mouth. Plus Amazon offers a buy one get one on this deal for the first couple of days.

Finally, the entirety of what Amazon did was based on canned wine and garnished with lettuce. This was a very simple meal, yet it was very incident. The orange chicken was not the flavor you would want in an Asian fast food restaurant; it was more of a greasy and sweet dish. On the inside, the chicken is very meek and boneless. If you are hungry this is a great choice for a meal. I was barely able to eat half of what was provided for me.

For the non-Asian lovers Amazon also offers take in place of any meal on the menu for a vegetarian style meal.

Two great performances are coming to CSUSB: The Lumen Volo Finnish Choir and Broadway legend Carol Channing are both booked to perform early this week. The Lumen Volo Finnish Choir which performs contemporary Nordic music will be performing on Oct. 24 at the university’s Performing Arts Building Recital Hall. Tickets are free and the show starts at 7:30 p.m.

Carol Channing was scheduled to perform at a scholarship benefit on Oct. 24 at the Ronald Reagan Performing Arts Theatre. Her performance has been rescheduled for a later date.

Tickets will be $35 per person and $60 per couple. VIP tickets are $100 each. VIP tickets include premier seating and a post-performance reception by Channing. Proceeds from the event will go toward CSUSB scholarship programs for students.

The night饥饿 Finnish choir is composed of two alto, two soprano, two tenor, one baritone, and one bass. Lumen Volo has been performing for over 13 years in many different venues all over the world.

The choir has been acclaimed to have brought back some of the interest in the area of harmonizing melodies from early music vocals according to the CSUSB news public affairs office.

Their music is a vocal mixture from the Renaissance, medieval and contemporary sounds. Volo has also been awarded special grants by the Finnish Cultural Foundation. The Finnish Choir, in 2002, was awarded special prize for a high-profile record from Finnish Broadcasting.

This choir is a major musical group in Finland and has almost always had a festival when the Choirs’ anniversary.

Channing has performed in many memorable films such as "Gentlemen Prefer Blondes," "Skidoo," and as a voice in the cartoon "The Brown Little Toaster Goes to Mars." Channing received a Tony for the Broadway hit "Hello Dolly."

Known for her big eyes and larger than life smile, Channing will tell stories about her amazing life and song.

Throughout Channing’s entire time performing "Hello Dolly" she never missed one of the over 3,000 plus performances. Some might say that her distinctive voice is what made her the star she was and still is.

"Her voice carries and she has great stage presence," said Ashley Schoner who has seen Channing in a sold out performance.

In 1995 Channing received a lifetime achievement Tony award for her illustrious career. Do not miss these two opportunities for women in entertainment not right here at CSUSB. You should not miss the free performance by Lumen Volo and keep your eyes open for Channing coming soon to CSUSB.

Imagine being paid to enjoy a night out with the stars? Seat-fillers, like you can rub elbows with celebrity, literally.

Seat-filling also offers people the opportunity to go to concerts, television tapings, game shows, and many other events for free. Compensation can be offered too. CSUSB’s Latino Business Student Association has created the seat-filler position as a fundraiser all the time.

This year alone they have raised over $700. On October 19 25-30 of the group members want to The George Lopez Show! They are estimated to have made about $300 at this show alone.

"The shows only take a couple hours; they do each scene 3 times." Lopez said. "The shows only take a couple hours; they do each scene 3 times."

The group goes to different study such as CBS Student, Warner Brothers and ABC. This has become a fundraiser for the LBSS for several years now, however this year they are doing it more frequently than ever before!

There are multiple agencies that organize these seat-fillings. Becoming a part of a red-carpet party or a fancy award show is as easy as simply creating a profile on seat-filler.com. Over 40 events each year, they have handled the SAG Awards, the Grammy Awards, The People’s Choice Awards, and the American Music Awards.

There are several opportunities for anyone to apply to the seat-filler position in North Hollywood. Please check the next insert for information about the 2007 Talent and education.

Here is the reason seat fillers have a job: producers of these events don’t like empty seats. They think they look bad on camera, especially if they are in the first ten rows or so where the number six, and which are often pumped by the camera, according to seat-fillers.com.

So when a celebrity guest gets out of the limo, into the bathroom, socialize with friends, or whatever it is a gap is left to arrive, the producers quickly fill that empty seat with a warm body.

Martin’s character does an entertaining job of demonstrating some of the challenges and excitement that being a seat-filler can bring. So go ahead and check out the seat-filler business! With no filling you are guaranteed a fun, entertaining way to see some extra cash.

If 17,000 people died tomorrow, would you notice?

Of course you would. There would be 24-hour news coverage. Dramatic headlines. And a devastating effect on our country forever. But last year, driving and drinking did kill about 17,000 people. It injured half a million more. But because it happened over a year rather than in a single day, most of us hardly noticed. It’s a growing problem, with a simple answer. If you drink, find a safe way home. And help remove the marks that drunk driving leaves on our country.

The Egyptian-themed program includes an introduction to the pharaohs and the exploration of death and burial in ancient Egypt. The event will be held on Saturday, Oct. 22 from 7 p.m. to 10 p.m. The celebration will include a tour of the Egyptian gallery and guests will have an opportunity to view the films "The Concept of the Afterlife," "Mummification," and "World Rituals.

One of the rituals that Egyptians performed was a technique called "bar weighing of the heart," which is an idea that the Egyptians had about the afterlife. Another ritual that Egyptians performed on the dead was the reopening of the mouth, which is an "act of the cycle of life." Within this ritual, they open the mouth with the same tools that they used for embalming and in doing the embalming.

There will also be Egyptians with authentic live music and reenactments of Egyptian rituals. There will be origami, self-branding, and fine wine will be served. Game-provided Marjorie Venk, who teaches Ancient Mediterranean Art History and Archaeology at the University of Maryland will attend and talk about "Egyptian Funerary Art to Las Vegas," which will focus on ancient Mediterranean cultures.

The "CSI: Museum" has the best ancient collection in all the museums, said Eva Kirsch, director of the Robert V. Franklin Museum. "People should really come to learn about this culture," she said.

Sarah Ehrachi, director of development at the Robert Alberts Art of Letters, said the evening will be educational and entertaining.

"This is not a Halloween party, but a birthday party, Egyptian style," she said.

The cost to attend the event is $21. If you would like more information about the evening, contact the Fullerton Art Museum at (949) 537-3714, or pick up a brochure for "The Secrets Of The Dead."

Program opens doors

The International Student Program offers foreign students the opportunity to come and learn English.

There are two options for students to consider when they are deciding where to live while attending the program at CSUSB.

Some decide to stay on campus while others choose homes.

With home stay, the students are able to experience American family life. In addition, students have the opportunity to sharpen their American language skills. If students decide to stay on campus, they stay in dorms that are 537-3374, or pick up a brochure for greater interaction with fellow students as well as with the CSUSB faculty.

Another benefit for students living in the dorms is that they also have the opportunity to explore California by taking several organized trips during their stay in the U.S.

The American Culture and Language program also offers Open University Study, in which students take classes and receive grades and units that may be transferable to the CSUSB if they wish to attend.

The International Student Program also offers training for foreign students to help them decide to stay on campus or off campus.

Indians Intertribal and dance competitions. Returning vendor Gray Wolf Manuel Band of Mission ~

wow, held at CSUSB until midnight with themselves bird singing could perform at the

c Though the change of venue did not dampen the spirits of those attending the annual San Manuel Pow wow, the field was too wet for everyone to perform on it. But dancers had to cope with a smaller crowd.

Jennifer Vayn/Chronicle

Dancers ready themselves to perform at the annual San Manuel Pow Wow at CSUSB October 13-15. The event opened Friday night with the blessing of the grounds and continued until midnight with traditional dancing, belt singing and dance competitions.

Jennifer Vayn/Chronicle

Described this event as the best Pow Wow this year Gray Wolf has followed the circle for 25 years, selling and displaying his handcrafted goods. San Bernardino residents Marce Roberts and Denise Gorrilinos both agreed that the evening of dancing and tribal art was beautiful. Roberts said she most enjoyed the costumes and the crafts at the events, which she has attended in the past.

Vendors selling food, car-

rances and jewelry stayed on the field Saturday and Sunday under their tents and heated the cold. The dancing portion of the event was moved back up campus to the old gym because the field was too wet to use after a torrential downpour late Friday night. Sunday morning vendors exchanged stories of the rain and the vendor change with anyone wandering where the dances were.

The change of venue did not sway spectators. Many began the morning taking in the crafts and food out on the field before making the trek to the gym to watch the show.

The crowd filled the room and dancers had to cope with a smaller size than they were used to, but everyone continued to sing in good spirits.

The number of vendors circles the basketball court, creating the standard Pow Wow circle. Several hundred people filled the gym near capacity. They stood up or brought their own lawn chairs for seating while others crowded in doorways and found any open bleacher seats to watch the event.

Dancer Tassia Spoonshunter, who stood outside waiting for her group’s turn to dance, was glad that people still showed up even with the bad weather.

Pow Wows are a time to “reaf-

form our cultural and spiritual roots, both for individual tribes and for Native Americans as a whole. Everyone is welcome to join in and learn something about the first Americans as we share in the best of Indian Country,” according to the San Manuel Band of Mission Indians website, www.sanmanuel-nsn.gov.

“The event was a big suc-

cess,” said student assistant Tarissa Spoonhunter, a member of the cross cultural center.

The Cal State Community Counseling Center offers confidential one-on-one counseling serving individuals on campus or the community for personal or emotional problems. For more information, please contact the Community Counseling Center at (909) 537-5569.
Long-distance romance

Chances are the only thing forever loving. Long-distance relationships are that they are forever loving. Despite that the Socratic of people, people or, or have, been in long-distance relationships.

Whenever the term "long-distance relationship" is met with cynical remarks and warnings against engaging in it. One is indeed like who loves you in any situation, you have only ever had horror stories and tales of heartbreak.

Despite the negativity surrounding long-distance relationships, people still find themselves caught in their web. If they were truly that bad then they most likely would have slowly slipped away over time. One might say that further.

To find the answer to this putnamian question, we must either agree or disagree on our policy. If we agree, there were relatively few negative comments from those who have experienced these relationships in the past. On the other hand, responses were similar from each person who shared their thoughts on what it is like to be in a relationship of this kind.

What I found from these people was that they believed the distance allowed them to truly get to know the person they were involved with. Communications was the only medium they could use to keep in touch. What was more, forgoing in person contact might be in a face-to-face relationship. Their communications was more frequent, but also deeper, as well as involving a wider range of topics. And where and when they came from, the more they were displayed as favorite.
The CSUSB men’s soccer team kept a strong first half against Humboldt State.

The Lumberjacks improve their overall record to 11-5-2 and their California Collegiate Athletic Conference mark to 7-5-2, bringing them into a fourth-place tie withOccidental, Whittier and Cal Lutheran, all with 7-5-2 conference marks.

Humboldt State (6-8-2, 1-3-2 CCAA) welcomed the Jacks to Eureka for their final home game of the 2006 season. The Coyotes fall to 5-1-2 overall and 4-8-2 in CCAA play.

The Coyotes were unable to find the back of the net, falling to the Lumberjacks 3-2. The Coyotes had several opportunities to score, but were unable to come out of the game with a point.

The Coyotes cut the score to a 2-2 tie when Matt Colwell knocked in goal off of a rebound. Eric Webster, who took the shot that was saved back into the game, was credited with the assist.

Play continued into sudden victory overtime until Mark Lanski, T im (Finch , Ramirez) placed the shot that was saved back into the net giving Humboldt the victory overtime.

Junior CSUSB students and staff from UCR Outdoor Excursions will be offering four nights of events, activities, and special events that will be held on the CSUSB campus. Highlights of the events include: a pumpkin carving contest, chili dinner for eating (we can’t guarantee the contents of the chili, but sides and toppings are available), a silent camp fire, and enough candy to make even the most picky eater feel happy.

We will end the night with watching some of our favorite Halloween movies on the screen in the gymnastics building. On Saturday morning, we will serve up our own special breakfast, and head back to campus.

Coyote Locker Room

Name: Practice Harris

As a Nunzio, Harris is a CSUSB senior on the men's basketball team. He was a three-year starter at Chaffey College, earning first team all-conference honors for the 2005-06 and 06-07 seasons. Harris played basketball all throughout his high school career at Upland High School.

Age: 23

Hometown: Upland, CA

High School: Upland High School

Major: Business Marketing Management

Bob Model: My Mother Why: "She has a never quit attitude and has overcome great challenges. At 19, she helped me to stay on track and when I think of something that I think I can't do, I always think of her.

Favorite Athlete: Allen Iverson Why: "He does what no one else does. In the NBA he is a very unique player.

Most Memorable Sports Moment: Winning CIF in high school. "My whole senior year in high school [basketball] was an amazing year.

Problems/Injuries/Superstitions: "I think about the team and what we want to do. I envision me doing well. I believe that seeing is believing and plus I have a lot of confidence in my abilities for sure," he added.

Best Part of Being a Coyote: "I love the tradition where we are expected to win. I love being part of a winning program and how the coaches don't take winning lightly.

What does he look forward to this season? "I look forward to being a team, and having a successful year. Just having fun and winning.

Ladies kick back

Aaron Garcia

Weird Ritual

Problems for the women's soccer team continued as they were unable to come up with victories against the Sierra College Wolverines and Humboldt State University. The two losses extended the Coyotes' winless streak to 14 games.

On Oct. 13, the Coyotes traveled to Sierra College in Rocklin, Calif. The two teams battled it out, leaving the Coyotes falling short in a 4-2 loss.

Coyote's freshman goalkeeper Laura Lyons was able to keep the Wolverines from scoring in the first half, collecting four saves. Lyons ended the game with six saves.

In the second half, the Wolverines finally were able to penetrate the Coyotes defense in the 73rd minute when a Sierra College player was able to beat Lyons. Lyons initially stopped the shot, but she was inside of the box.

The Coyotes were dominated on the offensive side as they were out-shot 12-5 for the game. Delimitely, the Coyotes stayed aggressive, although they committed 12 more fouls than the Wolverines.

The loss dropped the Coyotes' record to 1-4-0 overall and 6-12-0 in conference play.

On Oct. 15, the Coyotes, again on the road, had an opportunity to win a victory away from the sixth ranked Humboldt State Lumberjacks. But a penalty kick for the oppose in the second overtime period was the deciding factor, giving the Lumberjacks the win.

Again, the Coyotes were able to keep the game close throughout the match. Neither team was able to score in regulation resulting in overtime.

Lyons, the freshman goalkeeper for the coyotes, again played well collecting four saves for the game.

The deciding goal came with two minutes left to the first overtime period. A lumberjack player was fouled inside the penalty box resulting in a penalty kick.

The penalty kick was a shot on the top right corner, beating Lyons.

Sophomore Krista Feer and senior Amy Coffman tried to provide some offense for the coyotes as they both collected two shots each.

The Coyotes were out-shot as a team 19-7.

The loss for the Coyotes dropped their record to 1-5-3 overall and 6-12-0 in conference.

The Coyotes finish up their season on the road as they travel to California State Bakersfield and California State Los Angeles.

Jason Palmer/CSUSB

Women's b-ball throws it down with high hopes

Courtesy of Robert Whitehead

Cal State San Bernardino's women's basketball coach has a pre-season practice this week in hopes of putting together a set that will contend for a CCAA conference championship in 2006-07.

The Coyotes return all five starters from last year's 5-11 team, who led the team in scoring and rebounding in 2005-06. Along with 6-2 senior forward Marquita Stanley who led the team in blocked shots with 30 during a 16-11 campaign last season.

"We're trying to implement our offensive and defensive schemes for this year," said Head Coach Kevin Becker, starting his 11th season at CSUSB.

With 20 players out for the team, Becker has a lot of new faces to look at before deciding what will be the starting five. He will use the reserves by the time the season begins and the Coyotes are at home against Pacific Pacific University Wednesday, Nov. 29.

"I'm looking for chemistry and putting people on the floor whose skills fit into the framework of the team," said Becker.

"I expect our returning players to play in specific roles in practice. I will tell them they have to dominate the new players who are just trying to gain confidence," he added.

Becker described the groups as "hard-working" through conditioning and expects that to carry over to prepare for the season.

The Coyotes lost their season 2005-06 backcourt combo of point guards Thomas Thornton and shooting guard Amanda Morin to graduation.

These seniors combined a total of 32 points and 9 rebounds a game.

At this point, Becker is looking for senior Dina Doylan to play plenty of time as a reserve and a starting option.

"I'm looking for chemistry and putting people on the floor whose skills fit into the framework of the team," said Becker.

"I think she can carry that load and put up some numbers on offense," Becker added.

Other returning players who figure to see plenty of playing time include guards Jasmin McNeer, Rachael Johnson and Jaclyn Batliner.

Rainville averaged 11.1 points and 3.0 rebounds a game while starting all 27 games. Rainville, a guard, is a sophomore.

Becker's roster includes senior forward Denise Snyder and sophomore guard Heather Suttla, both of whom Becker feels more is expected this season.

Among the new faces that Becker expects to be significant contributors this season are transfer forward Jessica Christensen and junior center who has transferred to Cal Baptist, where she averaged 13.8 points and 8.1 rebounds a game for a 4-17 team last season.

"She will be a force in the paint" Becker said. Becker has plenty of depth at the guard spot.

Most of the newcomers are back court or wing players.
