Congressional hopeful Husing gets a warm welcome at Cal-State

by Rene Jacober

Democratic candidate for the 33rd congressional district, John Husing, addressed a large audience in PS 10 Wednesday.

The San Bernardino Valley College economist presented a talk discussing both domestic and international problems and political issues for the upcoming primary election.

"The county's voters are faced with the most critical problems in America's existence," Husing said.

Referring to Mayor Ballard, his Democratic opponent in the June primary, the College professor said "the voters must have an alternative to the man who arms his city's fire trucks as a solution to civil unrest."

As for Rep. Jerry Pettis, R-Loma Linda, Husing noted that the "incumbent voted against rat control, war on poverty and open housing bills."

Speaking about his qualifications, Husing said:

"I have a background in the domestic and foreign affairs of the United States."

**Lost and Found runneth over**

What do "Catch-22," ear-rings, a typewriter, and a little black book have in common? These and hundreds--literally hundreds--of items are in the Lost and Found Department of the Admissions Office.

Male and female clothing, a typewriter, and hundreds of other items are in the Lost and Found Department of the Admissions Office.

Who lost a typewriter?

Who lost a black book?
In the language of journalism, —30— means "the end." This term is usually typed on the bottom of a reporter’s last page when he submits his story.

For me, however, it symbolizes the end of my editorship. But for the newspaper, I hope it means a new beginning. Charged with an enthusiastic staff next year, The Pawprint is indeed capable of realizing the ideals upon which every newspaper is founded: freedom and responsibility.

As one of the pioneer editors of the student newspaper at Cal-State San Bernardino, it was my pleasure to establish the paper in the role it now serves. I hope the newspaper will be expanded to play a more vital role in the years to come. Its many possibilities were, perhaps, not realized this year. But they will come, I am sure of it.

As a last word, but not as an after-thought, it is only fair to admit that the newspaper’s advisor, Les VanMarter, must receive some of the laurels— if indeed this year’s paper deserves any. His suggestions and level-headed approach were invaluable. Although I think he felt like merely a "clearing house" for approving bills and supply requisitions, I sincerely hope that Dr. VanMarter does not underrate his own capacity as our advisor this year. He helped us through the tough decision of not stirring the college’s conscience in the "writing" of some of Cal-State’s best personnel. And although he did not agree with the tone of Gerald Farber’s "The Student is a Nigger," Van Marter was the first to champion our right before the Publications Board to print the controversial article.

"Thanks! cannot convey our real feelings; it is too small a word." —Patrick Sheeran Editor

Letters

Editor

Many students at CSCSB believe that class governments cannot function successfully and are merely a "clearing house" for approving bills and supply requisitions. They believe that many deserving students or organizations do not receive the credit they should. Some students believe that, if class governments were more effective, they would be an important part of the academic community at Cal-State. As to effectiveness in the student government, one expands: "Physical Plant: for building a sorely needed parking lot."

The Student Body President attempted to hurry a con-

Cal-State biologist works on insect control in world's only Tribolium stock center

Cal-State San Bernardino may be known for its windy desert location, but the little-known fact that it has the only Tribolium Stock Center in the world escape most students at the college.

What's a Tribolium? In Biology, the Tribolium genus includes insects commonly known as "flour beetles." Dr. Alexander Sokoloff, Professor of Biology at CSCSB, has been studying the genetics, particularly of Tribolium castaneum and Tribolium confusum for about 13 years. Sokoloff now supplies the beetle to scientists all over the world, he says.

Sokoloff's interest in flour beetles began after graduating from the University of Chicago when his major professor gave him some mutants to determine their mode of inheritance. "Up to that time, after some 25 years of research on these organisms," Dr. Sokoloff said, "a total of four mutations had been discovered. Since 1958, however, there has been a veritable population explosion of mutants. Despite the long developmental period (of about 45 days from egg to egg) about 200 mutations are now known in Tribolium and nearly all have appeared spontaneously, that is, without submitting the beetles to irradiation or chemical treatment."

SCIENTIST-AUTHOR

Dr. Sokoloff has discovered over 150 of these 200 mutations, and is largely responsible for having mapped the relative positions of many of them on the various chromosomes. This information is usually first reported in the "Tribolium Information Bulletin," which Sokoloff has edited since 1960. Two years ago he summarized all the available information on flour beetles in his work, "The Genetics of Tribolium and Related Species."

The increase in mutations available in Tribolium prompted Sokoloff to seek financial assistance from the National Science Foundation to establish a Tribolium Stock Center in 1965. This made it possible to bring 95 percent of the mutant material under one roof, he said. The Cal-State biologist now supplies the mutant material, as well as other special stocks, to scientists all over the world.

BERKELEY GENETICIST

Dr. Sokoloff received strong impetus in this research when he became the first Associate Research Geneticist and later, Research Geneticist at the Department of Genetics, University of California at Berkeley. His research interests he primarily in the study of population genetics and population ecology of the flour beetle.

"The work on mutants is of second-rate importance. Nevertheless, every bit of information, whether derived from experiments with emphasis on ecology, physiology, nutrition, biochemistry or what-have-you contributes to our basic knowledge of the biology of flour beetles."

Dr. Sokoloff maintains the value of flour beetle studies in the combination of the information provided by scientists of different backgrounds and training. Noting that "Radiology has reported the reaction of the beetles to various dosages of irradiation," Dr. Sokoloff said it is possible to render the insect sterile, an important aspect for those who wish to control these pests.

A DOUBLE LIFE

Up to now, Sokoloff has lived a double life. For the past two years, he has taught in San Bernardino, flying up to Berkeley every month to check up on the progress of his research at the University. His research in Berkeley will continue until the end of June. Now that research facilities have become available, he is seeking federal funds to continue his research at CSCSB.

Because flour beetles run millions of dollars of stored cereals and processed commodities, Dr. Sokoloff would like to see the introduction of beetles rendered sterile by irradiation or genetic means bring flour beetles under control. This would certainly make more food available to mankind, he says.

CSCSB Junior will Study in Germany

Carl Hellman, CSCSB junior, has been selected to study in Germany next academic year in the California State Colleges International Programs.

Hellman will receive CSCSB credit for the courses he takes at either the University of Heidelberg or the Free University of Berlin.

Two CSCSB students are currently studying in Europe. Linda Arth is attending the University of Upsala in Sweden, and Cecilia Ramirez is attending the University of Aix-Marseille in France.

To be eligible, students must be juniors, seniors, or graduates at the end of this academic year. They must have a grade point average of 3.0 GPA or better. Loans are available for students selected to study overseas.

Hellman, a graduate of Aquinas High, came to CSCSB when the college opened in September, 1965. He has made both the President's List and the Dean's List at CSCSB. An AS senator, Hellman is majoring in history.

McCarthy Hdqtrs. welcomes help

Volunteers to work for the California Primary campaign of Senator Eugene McCarthy are invited to attend a gathering at McCarthy headquarters Saturday, May 18, from 10:00 a.m. to 1:00 p.m. The headquarters are located in San Bernardino at 355 South E St.

After discussion and refreshments, the students will have an opportunity to call on voters with the McCarthy story, similar to that presented in the recent primaries.

Students interested in working in the McCarthy campaign are welcome to visit the headquarters weekdays from 11:00 a.m. to 4:00 p.m. They may receive instructions and materials for use in calling on voters. The local telephone number is Turner 5-4881.

The Junior Class is selling toy, stuffed St. Bernards next week in the cafeteria for $1.00.
Campus area has a colorful past

Spanish rancho heritage is dominant— but is there really oil here?

by Mary Helen Harris

The history of the area surrounding the Cal-State San Bernardino campus is plentiful and fascinating.

Located below Devil Canyon in the foothills of the San Bernardino mountains is just east of the historic Cajon Pass. The naming of Devil Canyon has an interesting story behind it. A Daniel Sexton and two Indians were sent down the mountain to survey a road to the timberland of the mountains. On the way up, one of the Indians was bitten by a rattlesnake and died. The remaining two continued on up the mountain and finished their surveying. On the way back down, the other Indian was also bitten by a snake and died. As he was dying, he shrieked, "Tell Mary Lou and the canyon received his name.

MOJAVE TRAIL

Long before any white man entered the San Bernardino valley, the Mojave Indian trade trail was established. The trail ran from just north of Needles southward through Barstow and Victorville until it met the San Bernardino mountains. One of these forks cut through the Cajon Pass, into present-day San Bernardino and continued down into Colton and Riverside. The San Bernardino Freeway closely follows this old Mojave trail. This trail was discovered by Pedro Fages, who in 1859, was the first white man known to have set foot in the San Bernardino Valley. Chasing a band of deserting soldiers, he followed the trail going northward and found he had camped on the grounds of present-day CSCSB.

HORSE RAIDS

In the 1830's, Mexico was in chaos and provinces like California were left to shift for themselves. It was at this time that the frequent horse raids on the ranchos began. A Ute chief, Milagro, with the "Hawk of the Mountain," led a band of Ute, Pima, and Snake Indians on raids into the ranchos of the valley. This band of 200 well-armed men raided the valley and led the stolen horses through Cajon Pass. One time Walkara and his men took 5,000 horses plundering through Cajon Pass, and raised such an enormous cloud of dust that it was noted all over the valley.

One of the ranchos raided was the Rancho Sueste. An owner was an English sailor named Michael White; he was asked by the San Bernardino ranchers to defend their stock from Walkara and his men. To keep a better way over the valley, Miguel Blanco, as the Californians called him, built a log-fortress on top of Don Devil Canyon. Overlooking the Cajon Pass, Miguel Blanco stayed there alone until the horse thieves stole all his stock and forced him to abandon his Rancho to the Ute for other owners. The owners are situated on the old Rancho Mousque Mauque and the site of White's house is but a few miles west of the campus.

Faced with the prospect of less-strict discipline and the gold fields further north, the Mormon Battalion of 500 men, women, and children left Salt Lake City in March of 1851. Entering the San Bernardino Valley, they camped in present-day Devils Dams before the horse thieves stole all his stock and forced him to abandon his Rancho to the Ute for other owners. The owners are situated on the old Rancho Mousque Mauque and the site of White's house is but a few miles west of the campus.

CSCSB WHEAT FIELD

The Mormons bought Rancho San Bernadino as their permanent settlement for $77,500. The Rancho was huge. The 35,500 acre ranch took in the heartland of the San Bernardino Valley, and with Amasa Lyman supervising, the area of San Bernardino developed quickly. Even as far as San Bernardino as it was, the present CSCSB campus was part of a 4,000 acre wheat tract.

CSCSB VINEYARD

Since the settlement of the Mormons in this area, Rancho San Bernadino was neither slow in developing. Even up until 1865, there were small, privately-owned ranches and farms all over this area, from Little Mountain to the Cajon Pass. Even today, four miles west of the college is such an area where the small ranches still exist. But business came to Verdantem and the surrounding area of Iron Mountain, and the vineyards were at their height. With the Myer-owned vineyards were the site of the first legal distillery in this area, granted in the late 1800's.

This land put aside for education is not a new idea. Nearly 60 years ago a small room schoolhouse was built for the children in the area. Unfortunately, it has been since torn down, but it used to be on the eastern portion of the CSCSB property.

WHICH WAY TO THE NUDIST COLONY?

In the early 1920's, the area around the college was believed by many to have as great an oil potential as the Long Beach area. Financed by a group of hopelings, one shaft was sunk almost 3,500 feet. But before oil was ever struck, the water company stepped in and protected the oil drilling because of damage it would do to an underground water basin, a necessity to the growing city of San Bernardino. The oil well, now capped, is located between Barstow Freeway and Ken doll Drive.

CSCSB WATER

In 1926, Desert Valley was developed for water purposes, the water coming from underground springs. It is now under construction, which will construct badly-needed water to the valley from the Feather River.

This is the Pawprint OMNIBUS - 1968.

It does not pretend to be an Annual, for we tried to avoid the posed shots of clubs and graduates which we believe are the curse of student annual publications. It is an attempt—an attempt, mind you—to capture the past year at Cal-State San Bernardino: a year of growth, humor and awareness. If the OMNIBUS, by design or accident, avoids the static side of campus life which an annual must portray, so much the better.

Nevertheless, our use of the term "omnibus" might be deceptive. We do not cover everything that happened this year; sixteen pages cannot hope to do that. We studiously avoided a textual resume of 1967-68 at Cal-State, utilizing our limited space for pictures.

Although you may be able to satisfactorily peruse this year-end publication in ten minutes, we feel that the finished product offers much more than an annual which you will shelve in the bookcase tonight.

We are grateful for the interest shown by the Publications Board and for the funds they made available for the OMNIBUS.

"Gee, maybe that speed bump is too high"
Matriculation

The Pyrenean spring spurs
And flows sporadically
Beneath the sere brown hills
Glimpsed now and then through
Haze filled blue-blue skies.

Morning Light with yellow sun
The ant-hill boiling with turn
Of bodies to the daily task
Of stuffing olive tempered
Heads with the red pimiento of wisdom.

Division on division so they
Grow, with budgets bloating
From the body politic of
Grudging senators to bodies
Rollicking with mirthful academic wit.

Decision on decision so we go
To register the soul on
Perforated paper in the files
Of consciously contrived conformity,
Shapeless pegs in gray scholastic holes.

"Hail Caesar" this we shout
While going to our several
 Arenas, to contend, defend
And explicate the knowledge
Implicit in the splitting of a hair.

HANDS UP
(The Pawprint received this letter from John Humphries, College Activities Advisor, but was unable to print it in the last issue. John is leaving Cal-State this year, so he asked us to print the letter in the OMNIBUS.)

I would like to thank the Pawprint staff for the banquet on May 16 which they held to honor Dr. Kreter, Dean Hume and myself. The honor was magnified by the high calibre of students who were responsible for the event, and of the students in whose behalf the presentations were made. I shall treasure the moment I received as a symbol of the indomitable spirit and loyalty of the students at CSCSB.

Moreover, I would like to take this opportunity to thank the administration, faculty, staff and particularly the students at CSCSB who have supported me and without whose help the activities program of the college would have been doomed to failure. It has been both a privilege and a pleasure to work with you and I sincerely hope that I have given as much to you as I myself have received. This past year has been an eventful one filled with excitement as well as disappointment. Many obstacles have been overcome but still others remain to be conquered, if this college is to realize its great potential as a really fine educational institution.

Lastly, I would like to pay tribute to the students at CSCSB. You are the life's blood of this college and the reason for its existence. If you atrophy because of apathy or disillusionment or some other disease of academia (either external or self-inflicted), then the life of this college shall become impaired, which in turn may lead to the decay of your own inquiring spirit. If we fail you, or worse yet, if you fail yourselves, then we have both betrayed the ideals of higher education and our college is reduced to a meaningless bureaucratic institution which propagates and perpetuates lies cloaked by the motto, "the pursuit of truth wherever it may lead". A community of scholars, which our college is purported to be, must be based upon mutual trust, respect, and the dignity of individuals as fellow human beings. Based upon my experience of working with you, the students of CSCSB, I am confident that you are equal to the task of building a true college community. I would hope that the other segments of the college will respond positively in a spirit of cooperation and dedication, and I extend my best wishes to the entire college for success in this endeavor.

John Humphries, Activities Advisor

DART-ITIS

Throw your darts to the platter machine,
the platter machine,
Throw your darts to the platter machine
killing the board for a song.

As you aim to the beat of the
platter machine,
the platter machine
As you aim to the strums of the
platter machine, LOOK-OUT!
One's gone wrong.

And thus barbarism is unveiled,
though wishing the board no ill
or even wall,
for one brief game of kill
you grotesquely maul
until all venom is expelled.

Dart-it!
