The Three Amigos

by Wendy Theroux

On May 14, 1987 Mr. Jerome Lawrence and Mr. Robert E. Lee will be performing and lecturing on campus. They will appear in the Creative Arts Theatre at 2:00 p.m. where they will lecture to the Theatre Arts majors and discuss "Under the Volcano", and future turmoil in the theatre. A special dinner will be held for them and they will appear in the Recital Hall in the Creative Arts building at 8:15 p.m. Their lecture will be open to the public. Tickets can be purchased in the Theatre Arts office for $5.00 and $2.50 for students. The title of their lecture is "Which one can’t spel"?

Mr. Lawrence is a noted playwright, director, and teacher. He began his theatrical career as an actor in high school, college, and summer theatres. He also directed numerous summer theatre productions. He was the senior staff writer for CBS (1939-41) and also had a part in many radio productions. Mr. Lawrence has traveled to and studied theatre in almost a hundred countries. On his round-the-world trip in 1964, he initiated the cultural exchange tour of the Harold Clurman rehearsal panel of Eugene O'Neill’s Long Day’s Journey into Night for Japan. He has lectured and taught at Banff School of the Arts, N.Y. University, USC, UCLA, Yale, as well as many others. He was also on the Drama Panel, U.S. State Dept. Cultural Exchange Program (1963-71), a judge for the Hopward Drama Award, and a judge for the Samuel Goldwyn Award.

Mr. Lee is an esteemed playwright, director, producer, and lecturer. He wrote Ten Days that Shook the World and directed it’s production in honor of the twenty-fifth anniversary of the Theatr Dept. at UCLA in 1973. He was also a director with the March of Dimes. He wrote several radio series (1938-45) and was a director of the Screen Guild Theatre, The Aldrich Family, and the Jack Benny Show. Mr. Lee was the professor of playwriting at the Pasadena Playhouse (1963) and a lecturer in graduate playwriting at UCLA (1966-74). He has also been a guest lecturer at many colleges and universities throughout the world, including Gorkey Institute (Moscow, USSR), Brigham Young University, University of Redlands, and USC. Letters to the Editor

Disagrees With Article

To: Mr. Eldred G. Lawrence, Chronicle Editor-in-Chief

After reading your article about Penni Overstreet, A.S. President, I was compelled to write back for several reasons. As I am sure this will never be printed, I will be brief and I hope not too curt.

The first thing I question was the methods used to get the article so quickly after the A.S. Board meeting. I am not satisfied that this was not already known and written before the Board meeting. It is my understanding that the paper must have an article seventy-two hours before publishing. So was it Steve Hekman's control over the typesetter, or yours that allowed it to be published so quickly?

The problem I have with the article is that the quotations included were from people who have a personal problem with Penni. If there were problems in the beginning, why have they waited until one month before she must step down to ask for her resignation? Penni recognizes that there are problems in A.S. But without support from her officers she is helpless. Hekman is a large part of this problem. He continually says Penni has not represented or done anything for the students. I wish him all the luck in the world as our new A.S. President. And maybe he will get some support. He has already lost it from many students because of the photocopier he keeps hoarding obtaining for the student body. That copier cannot be used by anyone but people trained on it. The allegation Novek made about being put her activities on campus is news. Regarding Mr. Hekman and the Board of Directors, well they can fend for themselves, as it was their decision. What the Chronicle attempted to do was to write an objective article about an important board decision, and that is exactly what happened, without the "help" of Mr. Hekman as you imply. The board's agenda was made public a week in advance, and the Chronicle editors covered it in a timely way.

Now about this 72 hour deadline...I'm curious to know where you got your information, we repeatedly state in every issue, our regular deadlines are the Wednesdays preceding publication at noon. This is done in regard to non staffs (clubs, etc.) who regularly submit articles and photos to us. Besides, if we did have a 72 hour deadline, I'd have to hire someone to camp out in the office on Sunday mornings.

Sincerely,

Lori J. Sabin, President Eta Kappa Colony Alpha Delta Pi

And The Editor Strikes Back

Ms. Sabin,

Your opinion is as valid as any person's, but your facts are questionable. Let me clarify a few of the points you brought up:

Regarding the speed at which the board's decision's story was published, I can attribute this to the same thing that causes us to publish sports news 3-4 days after the game or event happened. It's called "news value", and I can assure you that if you read any newspaper (professional or campus), you'll find that when an event of high news value happens, the name of the game is speed-to-report it, and to publish it. Whether you have an objective or personal (as the letter implies) viewpoint to this event, you cannot deny that a board of directors' vote of no confidence in the CSUSB student body president is news.

Regarding Mr. Hekman and the Board of Directors, well they can fend for themselves, as it was their decision. What the Chronicle attempted to do was to write an objective article about an important board decision, and that is exactly what happened, without the "help" of Mr. Hekman as you imply. The board's agenda was made public a week in advance, and the Chronicle editors covered it in a timely way.

Now about this 72 hour deadline...I'm curious to know where you got your information, we repeatedly state in every issue, our regular deadlines are the Wednesdays preceding publication at noon. This is done in regard to non staffs (clubs, etc.) who regularly submit articles and photos to us. Besides, if we did have a 72 hour deadline, I'd have to hire someone to camp out in the office on Sunday mornings.

Disagrees With S.U. Controversy Article

To the Editor

Dear Sir,

Regarding your article of 22 April, entitled "Controversy High in S.U. Expansion", there are several points to which I object. First, the Student Union's Board of Directors-referred to as "a committee set up to make decisions on what changes and additions will be made"-is comprised of six students representatives (one student position is currently vacant), two alumni representatives, two administration representatives, and two faculty representatives. The committee of the board which I think you intended to refer to is the Expansion/ Renovation/ Repair committee which is empowered to make recommendations to the board and take limited action, not to exceed $5000 in single expenditures for repair and renovation concerns for the current building.

Second, the allegation that "the board doesn't realize the size increase our school is experiencing increase our school is and will be experiencing", is completely incorrect. As of the first of many written program justification reports (February 87) for the expansion proposal, the board has experienced two years to accommodate a future student enrollment of 12,000 FTE (full time equivalent) within the current expansion proposal. This figure converts to a conservative estimate in excess of 15,900 students enrolled. Clearly this is well within the fifteen to seventeen thousand figure suggested in the April 22 article.

Third, while the Expansion/ Renovation/ Repair committee has only one student representative formally appointed to it, as a student representative who has attended all but one of these committee meetings over the previous year and all the board meetings, the board, is not, as Mr. Richardson feels, "running an administrative agenda". The fact that the board has worked at great length and under an April 17 deadline to get an expansion proposal on the Chancellor's staff,

Can the Review Board Spell?

by Wendy Theroux

Cinco de Mayo is a day of fun and festivities. Students at Cal State were able to join in with the festivities here on campus. The festivities took place at the Commons patio. Sounds of the Latin Society, a band who played Spanish music, filled the air. There were Spanish dancers and a booth that sold Cascarones and filled with confetti that are used to break over people’s heads on special holidays.

Five junior high schools, which were representatives of Project Upbeat, took part in the festivities. Project Upbeat is an organization that was established to make junior high students aware of the demands of going to college. There were 250 jr. high kids present with their teachers. Fun and laughter filled the air. Some of us, however, weren’t laughing along. Lunchtime came and a table laden with Mexican food was filled—enough to feed 400 people.

A speaker came up to the microphone and announced that lunch would begin. He told the junior high kids to line up; they did so in line that went around the building. Everyone else was told that they would have to wait until the junior high kids had their food (in order to get in line). That’s when a few unholy faces began to appear. Many more appeared, and it was A.S. (Associated Students) who had paid for the lunches. A.S. gave $1,700 for food, $675 for a band and Committee for Clubs gave $200 for the event. The money that A.S. and Committee for Clubs has in their treasury is the money that we, as students, pay in our student fees. So, in other words, the money was used to feed 250 junior high school kids and their teachers before we could have any ourselves. When A.S. gave the Board the money, they gave $1,700 for food. No stipulations were made about how the money would be used—it was as specific, other than food. No mention was made to A.S. about the junior high kids who would be eating.

When the rest of us college students finally got to eat, much of the food was gone and the plates were noticeably lighter than those given earlier. Now, the question is, why were the junior high kids allowed to eat before us? This question was asked to Gil Sanchez, who ran the event. He answered, in a way that it was A.S. (Associated Students) who had paid for the lunches. A.S. gave $1,700 for food, $675 for a band and Committee for Clubs gave $200 for the event. The money that A.S. and Committee for Clubs has in their treasury is the money that we, as students, pay in our student fees. So, in other words, the money was used to feed 250 junior high school kids and their teachers before we could have any of ourselves. When A.S. gave the Board the money, they gave $1,700 for food. No stipulations were made about how the money would be used—it was as specific, other than food. No mention was made to A.S. about the junior high kids who would be eating.

Student Representation

Dear CSUSB Student,

Last week in my letter, I discussed the structure of Associated Students, in this letter I will discuss student representation.

Other than the elected officers, an equally significant part of student work is accomplished through the numerous representative groups that serve on committees and boards.

The chance to work on a campus committee or board with faculty, staff, administrators, and students is truly a rewarding and enriching experience. Prior to running for an elected office, I was a student representative on many committees and boards. It is by being a student representative that I know the importance that students can contribute to the overall welfare of the campus community.

As you have probably heard many times, you can learn as much about yourself and the world by running for an elected office, I was a student representative on many committees and boards. It is by being a student representative that I know the importance that students can contribute to the overall welfare of the campus community.

What to Do After Graduation

A Note To Graduating Seniors

Over the years, I've had the pleasure of talking with thousands of students concerned with our society's future. Many of them have been seniors and have asked the question, "What can I do after I graduate?"

Often they ask that question with a feeling of resignation, a sense that they'll have to pass-up a full time involvement peace, environmental, consumer, and other issues in order to get a job that puts food on the table, a roof over the head, and a check in the college loan payment envelope.

Rubbish! There are countless opportunities for you to put your concise and creative abilities to work for the public interest groups were few and far between. Now, the field is burgeoning. Look through your Career Placement Office's copy of "Good Works: A Guide to Social Change Careers." There are many current opportunities available.

Jobs in the citizen movement represent a challenging post-graduate alternative to a student from social responsibility—the chance to build a future based on your generation's ideals and needs. The Center for the Study of Responsive Law, P.O. Box 19367, Washington, D.C. 20036.

Sincerely,
Ralph Nader
Lopez Speaks on U.S. Foreign Policy

by Sandra Plunk

Dr. Fred Lopez, assistant professor of political science at CSC Bakersfield, gave a lecture, "U.S. Intervention in Central America: A Chicano Perspective," on April 27. The former graduate of CSU San Bernardino went to Bakersfield not only to solicit manuscripts for the periodical "Latin American Perspectives," but also to experience the tensions in Central America firsthand for a broader teaching perspective.

Lopez presented a slide show culled from photographs taken (some of them illegally) in El Salvador and Nicaragua. It was divided into three parts: economics, politics, and military. He theorized that the wars in El Salvador and Nicaragua are not the east-west, communism against capitalism, of the same decadent, rather than battling foreigners.

Lopez, an advisor to M.E.Ch.A. at CSC Bakersfield, advised that members of M.E.Ch.A. to propose and lobby for new policies which include "true American values," including settling disputes through legal norms, domestic legitimacy to correlate policies, and stopping aid to the paramilitary. He also suggested passing a resolution on campus and for M.E.Ch.A. statewide to call for the withdrawal of support to the Contras. "Teach-ins" are important as well, "Education," according to Lopez, "is vital."

For Their Assistance With The "Yesterday" Concert.
Three students have been selected to represent CSUSB at the California State University Student Research Competition to be held May 8-9 in Fresno, California.

The three students are Viktoria Norberg from the English Department, Kathleen Schroeder from the English Department and Daniel Martinez from the Psychology Department.

The competition is designed to focus on Graduate level research that has been done at CSUSB. To participate however, one does not have to be a graduate student to submit a paper. Undergraduate papers are encouraged and welcomed.

In the English Department, Eric Grunewabi, Student Research Competition coordinator, has been working with the three students to help prepare them for the competition. This is the first year that CSUSB has participated in this competition, and there has been a lot of interest shown by students who want to participate in it next year.

Each department on campus is allowed to enter a team or just one student into the contest. Each area of study competes in its respective area of study. For example, the English Department team will compete against other English Department papers. This allows for a more fair judgment for all papers being presented.

To be eligible to go to the Fresno competition, the students must submit a 20 page paper together with the serial number. If the typewriters are not claimed by the time of the competition, they will be disposed of. Information is available from Hollie Larsen, Campus Police, ext. 7555.

The Graduate English Association is seeking donations for its "Literate Bake and Book Sale," to be held May 20-21 in front of the Fusu Library. Contributions may be left in "drop boxes" in the English Department Office (PL 236B) and outside Dr. Bruce Golden's office (CA 177). The donations will be picked up, and a message is left for Dr. Golden, ext. 7684, or Ellen Elstrum, 887-0087.

The official enrollment count for spring quarter will be 6983, which is the number of students who were on census date. However, the headcount translates to a full-time equivalent (FTE) of 5128.1. While both figures represent a drop from the traditional fall quarter high, they are 10.17 and 9.73 percent higher than the same statistics for spring 1986.

The three students are: Viktoria Norberg, from the English Department; Kathleen Schroeder from the English Department and Daniel Martinez from the Psychology Department.

New Technology in Learning

On Friday, 27 March 1987, I was invited to CSU Long Beach to view "The First Emperor of China, QIN SHI HUANG DI, 221-206 B.C." an interactive videodisc presentation by Dr. Ching-chih Chen, Professor and Associate Dean, Graduate School of Library and Information Science, Simmons College, Boston. The audience was peopled with Chinese scholars, historians, artists, archaeologists and librarians. From a cultural viewpoint, the video and data which covered the terra cotta army figures and the Great Wall of China were inspiring in themselves. Librarians and other technologists no doubt were fascinated by the interactive aspects of the projects. The program which was funded by a grant from the National Endowment for the Humanities and by Simmons College is contained on 2 videodiscs with 54,000 frames per side. It succeeds in its objective to demonstrate how harmoniously humanity and technology can be combined for unique cultural and educational experiences. Although still in the Research and Development stage, the plans laid out for the software to produce the interactive coursework phase were very impressive. Dr. Chen showed how one frame could be cataloged in numerous ways to almost guarantee accessibility by the student. Index terms for a frame of a terra cotta figure could be accessed by (1) the first three letters "ter", various spellings and spellings of "terracota" and words like "terror", "terrifying" etc. which could be descriptive of the statue's facial expression. Other items in the frame could also be accessed, such as the wall, trench etc. Three-dimensional viewing was accomplished by providing slides taken from all sides. There are more than 200,000 still and video images accompanied by music and narration. The narration is in English and Chinese and either audio channel can be suppressed. Chinese language students would benefit from this feature. Closeup viewing is also provided to highlight details of the statues. Pictures of the Great Wall were taken from a helicopter to augment the many still pictures also included. Dr. Chen feels her job as an Information Specialist is to find out what the patron wants to know and to provide it - not a bibliography or reference to some source at a distance. Her videodisc documentary on Qin's dynasty can be played sequentially for a general historical study, or it can be accessed randomly for close examination of any of the frames (there are a total of 216,000). In addition to the videodisc player and monitors Dr. Chen travels with a portable computer with a 10MB hard disk. She is travelling to various cities and institutions working on for the coursework phase is more complex and ambitious. Ideally, almost anything you ever wanted to know about the first emperor of China could be retrieved by asking the right questions and viewing the retrieved images or listening to the narration. With the newer technologies providing for audio, video and digital signal transmissions, it is possible that remote access to this type of program will be available.

Interactive video is a technique similar to the InfoTrac periodical index workstations which the Pflaum Library had for 60 days trial in September, 1985. The software allows the patron to interact with the database on the videodisc. With InfoTrac we had a rather simple periodical index to approximately 1000 magazines and journals. The database was searched using Subject Headings similar to those of the Library of Congress. The patron types in a subject at the IBM computer workstations. The software then retrieves that subject from the videodisc database and lists all the references that were indexed to that subject.

The software that Dr. Chen is working on for the coursework phase is more complex and ambitious. Ideally, almost anything you ever wanted to know about the first emperor of China could be retrieved by asking the right questions and viewing the retrieved images or listening to the narration. With the newer technologies providing for audio, video and digital signal transmissions, it is possible that remote access to this type of program will be available.
Safe Tanning Won’t Leave You ‘Burned’

by Sunny Bell

Ah, you’re all caught up on your reading and you don’t need to start that research paper for another couple of weeks. A few days at last! How about going to the beach to get some rays...you can get a good start on a summer tan! Boy, what a great day! It’s nice and hot and going into the water for a quick cool-off feels so good. It’s so great to lie in the sun and bake for another hour. Oops! Coming home you don’t feel so good. Your skin is prickling and feels dry, maybe you even feel a little sick to your stomach. But that’s okay...you’ll have this great tan in a couple of days when the burn fades away. What’s wrong with this scene? What really happened to your skin? What are the long-term effects? How could you have planned better?

Don’t think I’m going to advise you to stay out of the sun. Tanned skin makes you look good. Your teeth look white; you look healthy and young. But what a shame to waste your time sunning on the beach when the real advantage of the sun is that of the skin’s ability to get a good tan and tan safely.

First, you need a little knowledge of physics and human physiology. There are several types of rays that come out of the sun: those we’re concerned about here are the ultra-violet ones. They penetrate the skin cells and cause some changes. Tanning is a release of coloring in the cells that acts as a protective shield against further exposure to UV rays. The burn response is separate from the tanning response. You can have just as good a tan without getting burned first. Without the tanned protection, UV rays continue to penetrate; they may actually split chromosomes that, years later, will function inappropriately and turn into cancer cells. It may take twenty years after a burn to have that happen, but believe me, those twenty years slide by mighty fast!

So what to do?! You are the one who controls your outdoor life, so here are some facts to help you plan it wisely. Here in Southern California, UV rays are at their peak during the midday hours, especially during the summer months. If you protect yourself during peak times, you can actually spend much more time outdoors without experiencing a burn. Being near sand increases exposure about 30% from reflection. Being at higher altitudes increases this exposure about the same amount. This is because increasing moisture in the air at lower altitudes deflects a lot of rays back up. Being in the water is not protective; UV rays penetrate water to a depth of three feet. That’s where most of your body would be. Even being under an umbrella reduces UV exposure only 50%. an equal amount is reflected right off the particles in the sky itself and onto you. If you can see the sky under your umbrella, you are being exposed. Although it’s the wrong time of year to talk about it, being around snow increases exposure 95%!

Using sunscreens are the answer! You will stay tan, even with a sunscreen with an SPF (solar protection factor) of 15. You’ve seen these numbers on the tubes of suntan lotion you buy. Want to know what they mean? Scientists hired by the producers of these products test their products under artificial conditions with a solar simulator. They put a given strength of PABA (the SAFE chemical used in sunscreens) on one area of skin and no protection on another area of skin. After a certain period of time, they measure redness. The SPF is a ratio of the number measurement of the unprotected skin over the number of the protected skin. For example, if a certain degree of redness in an unprotected area of skin was assigned a value of 30 and the redness level of the PABA protected area was a 5, the SPF would be 30 over 5, or 6. This number, then, is relative to other strengths that are available which usually range from 2 to 15. Here’s something to remember though. After one hour, an SPF of 6 is reduced to 3. You need to reapply the lotion every hour. You can also use physical sunscreens, such as zinc oxide, but even though they seem now at lovely shades of pink and green to match your bathing suit, it’s impractical to smear them all over your body. Besides, they don’t let any sun in at all. You still want that tan!

I really want to give you some information on how to observe yourself for skin cancer, but space precludes. I’ll save that for next week along with news about another sun hazard...heat exhaustion. But I am going to squeeze in a word about tanning salons. They advertise that they only emit alpha U-V radiation (beta is the other main one). This doesn’t really mean much. Alpha rays create slower burning and less burning, but this is because they penetrate much deeper into the skin than beta rays. The effects they have there are unknown, and there is no reason to believe they don’t cause chromosomal damage to the deep cells. So be cautious. As I said before...and I can claim this as a truth...time certainly does pass. If you’re twenty years old now, it’s hard to imagine. But by the time another twenty years goes by, think back on what I said. If you’ve spared yourself the of long term cell changes, you can drop me a line (you’ll probably find me in the local nursing home) to tell me I was right and how beautiful your skin still is!

Inland AIDS Project

Inland AIDS Project was formed by a group of concerned citizens of the Inland Empire who want to reduce the impact of AIDS on our community and especially on persons with AIDS.

Inland AIDS Project provides:
- Professional and peer counseling for persons with AIDS
- Confidential referrals for HTLV III Antibody test
- Speakers on a variety of subjects relating to AIDS
- Opportunities for citizens to become volunteers

In this health crisis, there are needs for positive social growth. We must give emotional and financial support to those who have or are at risk of AIDS. We must foster a community network to provide a supportive atmosphere.

WE ARE COMMITTED TO MAKING A DIFFERENCE!

Men’s Baseball Finishes Season With A Win

by Sheila Huggins

It was a good way to end the season. The season for the Coyote baseball team, that is. They won their last game against Point Loma College by a score of 6-3 to make their final overall record 18-14.

The Coyotes got revenge against Point Loma for having lost to them earlier in the season. They showed no mercy as they smashed 11 hits during the game. Point Loma did all of their scoring in the first three innings until Cal State shut the door and didn’t allow anymore runs. The Coyotes scored two runs in the second and third innings to make the score 4-3. They added two more for insurance in the seventh and ninth innings to give Coach Chuck Deagle’s team their final victory of the season.

In a prior game against Cal Baptist College, the Coyotes lost despite the three-run homer by junior first baseman Bill McCafferty in the top of the third inning to give Cal State a 3-0 lead. But that wasn’t enough to hold on, though, as Cal Baptist won 9-6.

McCafferty had a great day while going 3 for 5 and having four RBI’s. Overall, he had a batting average of .410 and led the team in home runs with ten and in RBI’s with 36.

Senior third baseman Ramie Richards also had a high average of .423 while getting 29 RBI’s during the season. He compiled five homers, two triples, and eight doubles for the Cal State squad.

Senior right-hander Dean Tanner, led the Coyotes in pitching throughout the season with a record of 8-3 and an ERA of 2.41.

The baseball team has only existed for one season and yet they managed to obtain a winning record. With only three seniors in the starting line-up, the future of the Cal State Baseball Team looks very bright.

SOFTBALL

Coyote Ladies Finish With Record of 16-12

by Sheila Huggins

The Cal State softball team ended their season with a mixture of good news and bad news when they played a doubleheader against UC San Diego on May 2.

The good news was that they won their first game by a close score of 5-3. However, the good was followed by a disappointing defeat which went into extra innings.

The Division III Coyotes ended their season with a winning record of 16-12 which is rather quite well considering this was the first year Cal State has had a softball program. "We lived up to our goal this season since it was our first year," said Coach Jo Anne Bly. "Next year we’ll do even better."

During the first match-up of the doubleheader, the Coyotes were down by one run while going into the sixth inning. Lisa Hibborn got on base with a single to left field. The next batter, Michelle Philayw, hit a ball over the first baseman’s head to score the tying run. Then, the game was history when Kim Easley hammered a homerun to make the score 5-3.

Kim Casey pitched the entire seven innings while only giving up one walk. Tammy Shearer had a solid game on offense while hitting a triple and a double. Anne Cordaro and Lorraine Hernandez each added singles to help contribute to the victory.

The second game was a lot closer than the 8-4 score indicates. In fact, it was so close that it went eight innings. Although the Coyotes hit extremely well while compiling ten hits (three of those were doubles), UC San Diego got the lucky breaks to win.

While going into the bottom of the seventh, San Diego was ahead 4-3. Hernandez got on with a walk and was moved to third by a double by Cordaro. Then, Hibborn hit a sacrifice fly to center field for Hernandez to score the tying run. The Coyotes had an opportunity to win with a runner on third and only one out, but they were unable to capitalize on the situation.

San Diego went wild in the top of the eighth by scoring four runs on three hits and two errors. Cordaro smashed a double and two singles during the game to lead the team offensively. Terri Paine and Shearer each had two singles, while Philayw and Easley each had doubles. The other hit came from Hibborn.

James Payne takes a jump shot at the gym on Wednesday during “Open Gym at CSUSB”. (Photo by Dennis Nadalin)
Cool Deep Water of Lake Arrowhead: Hot For Fishing

by John R. Horton

Outdoorsmen everywhere are in a hot pursuit of that pristine-like body of water, that fishable resource relatively unaffected by fellow-fishermen. Consequently, many of the Southern California variety of this adventurous brad trudge miles from home and heart and in search of the lake's high level of fishing productivity. The water body is teeming with larger than average rainbow trout, kokanee salmon, channel catfish, and both largemouth and smallmouth bass.

Craig Russell, points of Lake Arrowhead, and visitors alike who fish the lake, fortunate are those sporting locals, who fish the lake in Southern California, 

Teeming with larger than average rainbow trout. —Excerpt from the Chronicle May 6, 1987

Lake Arrowhead's high level of fishing productivity is no surprise at all, according to the lake's maintenance engineer, Craig Russell. "We have probably the cleanest lake in Southern California," Russell asserts. According to Russell, the water's purity has a direct effect on the size and health of the fish—rainbow trout, brown trout, kokanee salmon, channel catfish, and both largemouth and smallmouth bass.

Russell attributes the clarity first to the extreme depth of the lake, typically 135 feet below the surface. "Since the lake is deep," explains Russell, "decomposed components naturally gravitate downhill to the tower." Periodically, I purge the five-foot-thick belt of bottom gunk out the tower and into Willow Creek. That way the layer of decomposed water and matter remains thin—we just don't let it build up and deoxygenate the lake."

Once purged, Russell drives down to Willow Creek and scoops up the larger trout, which he reintroduces into the lake—some of the lake's smallmouth bass. After experimenting with spinner lures for a few minutes and several splashes later, Erik hauled aboard a hefty three fourths of the channel cat into a boat stationed above the main channel. Another factor of the lake's productivity is the heritage of its fishing regulations.

Erik Lundberg, a fisherman highly referred to by Mac is the heritage of a series of plantings made in the late 1950's, states fisheries biologist Frank Hoover, who confirmed a swap later this year of the lake's smallmouth for some of Big Bear Lake's silver salmon population.

The kokanee strain of salmon referred to by Mac is the heritage of a series of plantings made in the late 1950's, states fisheries biologist Frank Hoover, who confirmed a swap later this year of the lake's smallmouth for some of Big Bear Lake's silver salmon population.

McKenzie also recounted a 16 pound 9 ounce German brown that took Wilson Crowder 4 1/2 hours to land—30 years ago. Another purposefully introduced species, the smallmouth bass flourishes in the lake. A local revealed he frequently takes two pound bass by trolling with typical bass plugs on 10 pound test line in six to eight feet of water. And just last year, says Russell, a fisherman hauled in a golden 20 ounce, nine pound channel catfish, and I teamed up Saturday.

Crusing the shoreline, Erik tossed out a gold no. 2 Mepps spinner and let out three colors of lead core line. Just as we were nosing southward past Rainbow point, Erik's level-wind reel started clicking. A few minutes and several splashes later, Erik hauled aboard a hefty three fourths of the channel cat into a boat.

For more information about share fishing regulations, call the A.L.A. at 337-2553. For boat rentals telephone Arrowhead Sports, one can also fish from shore. For information call (714) 337-2444.
Susanna Hoffs' Allnighter: 'Devoid of Any Kind of Plot'

by John Purcell

The title of Susanna Hoffs' movie, The Allnighter, more aptly describes the amount of time the movie takes to come to its conclusion than if does anything that goes on in the film.

Devoid of any kind of plot, the movie is the latest in the time-tried Hollywood tradition of putting a hot recording star in a movie. There is a somewhat interesting twist here, though—the fact that Hoffs' mother, Tamar Simon Hoffs, directs the film. Susanna Hoffs is fortunate that she does not have to rely on an acting career. Hoffs is lead singer of The Bangles, one of the hottest pop groups on the radio these days.

Rumplestiltskin Leaves You 'Pleasantly Charmed'

by C. E. Thompson

Rumplestiltskin is a new children's film released by the Cannon Group. Happily, it is a film only children can enjoy. Adults will find this a delicious change of pace.

Based on the Brothers Grimm fairytale by the same name, it is the story of a miller's daughter, played by Amy Irving, whose father has sold the king that his daughter can spin straw into gold. Billy Barty is wonderfully funny as the title character who comes to her aid. His fiendish wickedness is a continual delight. In exchange for spinning straw into gold, the daughter must promise upon her marriage to the prince, to give him her firstborn child. When the child is born, the miller's daughter, now a princess, naturally does not want to part with her child. Rumplestiltskin, who has a bit of a soft spot, agrees to relent, if within three days, she can guess his name. A low budget musical, it is not as slick as the old Disney fairytales. The songs are not memorable, but they work well within the context of the film. Their simplicity adds to the illusion that it is perfectly natural for fairytale to break into song.

The acting is good. The casting is terrific. Clive Revill makes a wonderfully awful king. John Moulder-Brown is perfect as the handsome and kind prince. The costumes are lovely, and the sets are quaint. There is no grandeur; there are no dazzling special effects. They are not needed. A family effort (Irving's brother, sister and mother put in a hand), this film spills over with charm. This is the movie to see when your day has been a long series of disasters and you're headed for a nervous breakdown. It does not leave you breathless from excitement. But it does leave you pleasantly charmed.

It's too bad her mother doesn't have a singing career to fall back on because she won't be getting many offers after this bomb. Ose would think a daughter could expect more from her mother. Hoffs looked better in the 4 minute Walk like an Egyptian video she did with the Bangles than she does at any time in this film.

While one would not expect any earth-shattering idea on life from this type of movie, a minimal amount of plot and maybe just a little acting would have helped.

The story centers around Hoff's character, Molly, who on the night before her graduation from Pacifica College has come to the earth-shattering conclusion that she hasn't had an earth-shattering romance. While this may be bit depressing—though really hard to believe—it is not the stuff good or even decent movies are made of. Besides the lack of plot and acting three is also the fact that Hoffs does not sing, nor do we hear any music by the Bangles. The other members of the group should feel fortunate to be so removed from association with the venture.

Nonetheless, one would expect a fairly high box office total from the film which will no doubt be patronized by men with fairly normal hormone counts. Hoffs never looks bad, though the ninety minutes the film takes could be better spent watching her on MTV. 

The movie contains very tame love scenes which Hoffs' mother enjoyed directing. On the Today show she said she enjoyed directing the scene because it was a rare that a mother gets to tell her daughter, "How to do it". Besides the lack of plot and the earth-shattering conclusion that she hasn't had an earth-shattering romance, there is no music by the Bangles.

There is a somewhat interesting conclusion than if does anything that goes on in the film.

Hoffs docs not sing, nor do we hear any music by the Bangles. The other members of the group should feel fortunate to be so removed from association with the venture.

**Talk To Me!**

*by Camille Brooks*

Many night I lay awake and wonder where's your mind. I wonder if it's time you need or am I left behind.

You may not realize just what you have in me, I'll be there where you need me and love you faithfully,

I won't be the one to tell you, you must choose, or argue over nothing or play the games that others often do,

I'm just here to love you and give you all I can, All I want for you to do is walk with me hand in hand.

---

**A Very Short Story**

*by Larry Koch*

Awhile ago, not very long really, there were thunder cloths of destruction gathering on the horizons.

There were wars and rumors of wars. Might nations stalked the small No back was safe. Madmen ruled the nights. Death was patiently rewarded.

The world powers decided to cooperate on a project to promote global unity. A computer was to be built that could address the world's ills.

The effort was truly global. Children gave rubles and pesos. Poor countries offered that rarest resource: original brains.

The computer was Cray cubed. Connected to circuits simple and complex. On demand mighty turbines beneath the silent waters of Lake Mead would hum perceptibly louder supplying the electrical life blood. It could monitor the cadence of babies breath slumbering in nurseries and talk to galaxies with long radio waves.

A proper christening was needed to introduce this marvel to the public.

Ideas were cast and what was reeled in was to ask the question "Is there a God?" Data was entered. It whirred, barely. Blinked (and winked). There is now."
by Joe Cortez

The small burgundy Renault coasted down University Parkway as a happy Dr. Patricia D'Souza, arrived for evening classes at Cal State San Bernardino.

Dr. D'Souza is one of 46 new Cal State professors that year to help meet the needs of the campus' growing student population. She is the newest faculty member of Cal State's information management faculty. The small burgundy Renault coasted down University Parkway as a happy Dr. Patricia D'Souza, arrived for evening classes at Cal State San Bernardino.

In her administration building office, she noted that although she is a newcomer to the profession of teaching.

Fresno, they called it (the major) Diamond Bar, where she lives with her husband, Arvind. She chose to teach here because it is close to her husband's job.

"When we left for Fresno, I only wanted to transfer to another Cal State in the area. I chose San Bernardino." Dr. D'Souza reflected on the professional consulting career she left behind in Fresno. "I left a large clientele back there," she said. She smiled and added, "I'd like to do some consulting out here too."

On her way to a professional career, Elaine Patrick, photographed at the Ohio State University, where she received her doctorate in information management. Her dissertation investigated the use of micro-computers in education and their usefulness as a learning tool. She found that micro-computers were beneficial since they allow students a more individualized, self-paced method of learning. She offered an example.

"When I lecture for half an hour, if you didn't get it all in your notes, that's it—you lost it. A computer lets you go over the information again if you didn't get it the first time."

Dr. D'Souza is currently working on a research project under an education grant involving a nationwide survey of the Fortune 500 companies. She is studying the implementation of information and data base systems among the large corporations and especially how management is dealing with the new systems.

Her only suggestion for improvement for Cal State is "I would like to see more computers," she said.

She also says about students here at Cal State, "I don't see much of a problem with freshmen as with older returning students who have obligations. Jobs and families take time, and there isn't any left for studying." Dr. D'Souza pointed out that this can add pressure to an already volatile situation for the older student.

"When it's a question of A-B-C, younger students have time to study, and you (older students) have to compete," she intimated. "For that, there's no curve, and it all comes down to competition—that's what it's all about."

The competitive spirit and the motivation to learn is said by some to decrease as the years go by. But Dr. D'Souza sees it differently. She pointed out that an education is the key to success in this country, and to make the grade, the motivation has to be present.

"Everybody wants to increase their standard of living. It's a human reaction. I don't think the generations can change that," she said.

As for her own future goals, Dr. D'Souza would like to do some writing and publishing. She also hopes to do some consulting work here as well as to advance her teaching career.

"Some day I hope to go into [university] administration," she said.

Dr. D'Souza like her small office in the Administration Building "It's O.K., kinda small," she said glancing at the shelving, and then the door. "Well, I haven't caught claustrophobia yet."

What Dr. D'Souza likes most about Cal State, are the people. "The people have all been so warm and they seem to be sincere."
applicants to be intelligent, assertive and enthusiastic. High ratings were given to applicants who appeared professional and composed, and who could communicate with the recruiter effectively.

In another survey of 35 northeastern Ohio firms, general appearance was ranked number one by the off-campus interviewers surveyed. In a recent article, Professor Russell L. Ogden of Eastern Michigan University, commenting on student dress said, "Business, at least at interviewing time, is still a conservative profession."

Recruiters also liked graduates who have a sense of exactly which line of work they prefer and why. Karen Gillik, president of Karen Gillik & Associates, who counsels students on career placement, says, "As graduates came in to see me, I realized they had spent four years earning their degree and didn't even know what they wanted." She suggests students decided the type of company they would like to work for, visit these types of companies, learn the functions of each, and then decided where they could best fit it.

Lastly, preparation for interviews starts with doing your homework about the company. This should be done so an applicant can converse somewhat about the company and its functions. In a recent issue of Changing Times, Jack A. Mitchell, assistant director of personnel for United Merchants & Manufacturers reports said, "Preparation is the key to the interview but most applicants are not prepared. Only one out of a 100 has bothered to research the company that is interviewing him, only one out of 30 can discuss his college work at any depth; only one out 25 is prepared with questions about the job or company; only 10 works at selling himself."

Landing a job in the crowded and highly competitive job market will not be easy. But the graduates need to get their foot in the door. Conquering that all important employment interview, could be the break they need to get an edge.

**QUESTION #2**

**HOW CAN THE BUDGET-CONSCIOUS COLLEGE STUDENT SAVE MONEY?**

a) Save over 50% off AT&T's weekday rates on out-of-state calls during nights and weekends.

b) Don't buy textbooks when "Monarch Notes" will do just fine.

c) Save 38% off AT&T's weekday rate on out-of-state calls during evenings.

d) Count on AT&T for exceptional value and high quality service.

e) Hang around with the richest kids in school; let them pick up the tab whenever possible.

If you're like most college students in the western hemisphere, you try to make your money go a long way. That's why you should know that AT&T Long Distance Service is the right choice for you. AT&T offers so many terrific values. For example, you can save over 50% off AT&T's day rate on calls during weekends until 5 pm Sunday, and from 11 pm to 8 am, Sunday through Friday. Call between 5 pm and 11 pm, Sunday through Friday, and you’ll save 38% off our day rate.

Ever dial a wrong number? AT&T gives you immediate credit if you do. And of course, you can count on AT&T for clear long distance connections any place you call.

To find out more about how AT&T can help you save money, give us a call. With a little luck, you won't have to hang around with the rich kids. Call toll-free today, at 1-800-222-0370.

FINANCIAL AID STUDENTS

IMPORTANT NOTICE
FINANCIAL AID AND COMPUTER ASSISTED REGISTRATION (CAR)

To register through CAR, the entire fee must be paid by the appropriate deadline date. To assure registration through CAR, students are advised to pay fees from their own funds. If this is impossible, the Financial Aid Office may defer the registration fees if the student has a complete 1987-88 financial aid file by the dates below:

<table>
<thead>
<tr>
<th>PRIORITY #</th>
<th>PAYMENT DEADLINE</th>
<th>FINANCIAL AID COMPLETE FILE DEADLINE</th>
</tr>
</thead>
<tbody>
<tr>
